

Smart Agriculture - Demystified

Invited Talk 2023 – SRM University, AP

Guntur, India, 21 July 2023

Homepage

Prof./Dr. Saraju Mohanty
University of North Texas, USA.

Outline

- Need for Smart Agriculture
- Agriculture → Smart Agriculture
- Factors affecting type of crop
- Technologies used in Smart Agriculture
- Smart Agriculture – Case Studies
- Challenges and Issues in Smart Agriculture
- Smart Agriculture Applications
- Smart Agriculture & FL
- Supply chain- Practical Implementation
- Security and Privacy Challenges in Smart Agriculture

Smart Agriculture – Drivers → The Need

Global Population Explosion

- Global population expected to be **9 billion** by **2050** compared current population of 7.8 billion.
- Population → Demand for natural resources → Demand for food
- **Need of the Time:** Make the agriculture utilize fewer natural resources, increase yield and make the farms climate independent.

World Hunger

- According to world hunger clock, 828 million people are under nourished.
- Controlling population is one way of tackling with raise in demand of food.
- Increase the agriculture production is one more remedy which can reduce World hunger.

Can we Have Any Crop, at Any Place?

- The factors determine the type of crop that can be farmed based on different environmental properties:
 - Climate
 - Elevation
 - Slope
 - Soil
 - Water availability
 - ...
 - ...

Any Crop, Any Place: Elevation and Slope

- Affects soil formation, water drainage, and availability.
- Limits Arable land.
- 1% of crops are grown with elevation greater than 2000m (e.g., wheat, rye, oats, barley and some vegetables.)

https://www.engineeringtoolbox.com/air-altitude-temperature-d_461.html

<https://www.quora.com/Does-wind-speed-increase-at-higher-altitudes-Considering-that-the-air-gets-thinner-it-would-be-assumed-that-the-wind-speed-would-reduce-as-well>

Any Crop, Any Place: Soil

- ❑ Formed from weathering rocks (source for minerals needed); Organic-matter contents (source of fertilizers).
- Soil properties effecting the crop:
 - ❑ **Depth** - Approx. 100cm of depth for growth
 - ❑ **Texture** – Determines water holding capacity and root aeration
 - ❑ Organic matter content – Breakdowns faster in sandy soils than fine soils
 - ❑ Fertility – Potential capacity of soil to support plant growth
 - ❑ **Minerology** – Soil chemical characters like pH, Salinity, Cation-Exchange Capacity (CEC).

Any Crop, Any Place: Soil Water

- ❑ *Soil Water = $f(\text{Precipitation, Percolation})$*
- ❑ **Percolation:** Process of a liquid slowly passing through a filter.
- ❑ **Precipitation:** Water that is falling out of the sky, e.g., rain, drizzle, snow, sleet, and hail.
- ❑ **Types of Crops, Plant Growth = $f(\text{Soil Water})$.**

- ❑ Excessive soil water is also a problem during flowering, pollination and grain filling.

Any Crop, Any Place: Vicious Negative Feedback Cycle

- Land usage for other needs
 - ❑ Growth in population is causing the need for residential land which is reducing the amount of arable land available for farming.
 - ❑ Growth in population → Need for residential land
 - ❑ Growth in population → Demand for farm products
 - ❑ Demand for farm products → Need for farmland (Paradoxical)

Vicious Negative Feedback Cycle:

Population Increase → Increase in Need for Residential Land → Decrease in Farm Land → Increased Demand for Farm Products

Agricultural Land Reduction is a Global Crisis

Salination

Soil Erosion

Deforestation

Construction on Farm Land

Source: <https://www.omegaonline.org/article-details/Restoration-of-Degraded-Agricultural-Land-A-Review/1928>

Solution → Smart Agriculture

- Population control techniques are in place and still have not effectively solving the food scarcity.
- Need to make farms climate and environment resistant.
- Finding ways to cultivate and produce reasonable yield in non-favorable conditions.
- Reduce need of resources such as farm area.

Agriculture or farming is the practice of cultivating plants and livestock.

Crucial for → Smart Cities and Smart Villages

Source: <http://edwingarcia.info/2014/04/26/principal/>

Agriculture → Smart Agriculture: Broad Overview

Cities and Villages - History

Partial Reconstruction of Chatal Huyuk huts

Source: <https://www1.biologie.uni-hamburg.de/b-online/library/darwin/prem5.htm>
Based on a reconstruction by Orrin C. Shane III

- ✓ After 10,000 BC humans settled down in villages.
- ✓ Neolithic village at Chatal Huyuk in Anatolia (now Turkey) of area 13 hectors built in 7,000 BC.
- ✓ Partial reconstruction of the village gives an idea of buildings.

“First true cities arose in Mesopotamia, and in the Indus and Nile valleys sometime around 3500 BCE.”
-- LeGates and Stout 2016, The City Reader

Indus Valley Civilization
(3300 BCE to 1300 BCE)

Agriculture History

Agriculture or farming is the practice of cultivating plants and livestock.

Agriculture played a Key Role in the growth of civilization.

Ancient Egypt
- 15th century BC (1500 BC to 1401 BC)

Agriculture is the Key Factor of Civilization

- 10,000 BC: Farming started by Ancient Egyptian Civilization on the Nile River.
- 9,000 BC: Indus Valley civilization started wheat and barley.
- 8,000 BC: Sumerians started to live in villages near the Tigris and Euphrates rivers and made a canal system for irrigation.
- 8,000 BC: Asian rice was domesticated on the Pearl River in southern China.
- 3,000 BC: Americas farmed squash, beans, and cacao.
- 2,500 BC: Animal-drawn plough in the Indus Valley Civilization.

Agricultural Evolutions & Industrial Revolutions

Source: Y. Liu, X. Ma, L. Shu, G. P. Hancke and A. M. Abu-Mahfouz, "From Industry 4.0 to Agriculture 4.0: Current Status, Enabling Technologies, and Research Challenges," *IEEE Transactions on Industrial Informatics*, vol. 17, no. 6, pp. 4322-4334, June 2021.

Digital Farming

- Digital agriculture is about collecting and analyzing data.
- Develops actionable intelligence and generates substantial added value from data.
- Helps farmers increase production, save money, and reduce hazards.

Source: <https://www.dtn.com/precision-farming-vs-digital-farming-vs-smart-farming-whats-the-difference/>

“Consistent application of the methods of precision farming and smart farming, internal and external networking of the farm and use of web-based data platforms together with Big Data analyses”.

- DLG (German Agricultural Society)

Agriculture to Smart Agriculture

■ Traditional agriculture:

- ❑ manual labor
- ❑ low productivity
- ❑ Climate dependency
- ❑ Limited by geography

■ Smart Agriculture:

- ❑ Sustainable
- ❑ Intelligent
- ❑ Efficient
- ❑ Eco-friendly

Smart Agriculture Market Worth
US\$18.21 Billion By 2025.

Smart Agriculture Architecture

UAVs takes images, sprays fertilizers.

Self-Driving Tractors sow with precision, plant trees at the right depth. **Productivity Increases.**

Smart Collars provides information on cattle health and their movement.

Smart Sensors collect data from soil and air. **Decision taken for irrigation and fertilization.**

Cloud stores data.

Edge Devices compute locally and take decisions.

Smart Agriculture – Technologies

Smart Agriculture Technologies

Source: A. Mitra, S. L. T. Vangipuram, A. K. Bapatla, V. K. V. V. Bathalapalli, **S. P. Mohanty**, E. Kougianos, and C. Ray, "Everything You wanted to Know about Smart Agriculture", *arXiv Computer Science*, [arXiv:2201.04754](https://arxiv.org/abs/2201.04754), Jan 2022, 45-pages.

Driverless Tractors

Autonomous and Robotic Labor

- Due to migration of people from rural areas to urban areas, there is shortage in labor for farming.
- Use of Autonomous and Robotic labor can increase the productivity and quality of work.

Drones or UAV for Smart Agriculture

- An automated flying tool which has pre-planned flight and controlled by remote is called a drone.
- Usage includes:
 - Imaging for identification of weeds.
 - Fertilizer and weedicide applications.
 - Weather forecasting.
- Makes use of different sensors, actuators and GPS.

Planting and Sowing Tools

- Unlike other autonomous applications implemented in the farms, using autonomous robots for planting and sowing is successful.
- It is easy to implement and perform the operations.
- Before planting, seedbed must be prepared for creating favorable conditions.

Automatic Irrigation Systems

- Surface Drip Irrigation (SDI) is used to distribute the water evenly in the farm.
- These SDI are typically controlled manually to increase the efficiency.
- Using moisture sensors to integrate to the SDI can help in better crop yield.
- IoT sensors are integrated with SDI which can also be linked with fertigation (Irrigation water plus fertilizer).

Agriculture Data – Crowd Sensing

- Data is an asset.
- Helps in communicating farm related issues with stakeholders.
- Smart phones and wearable devices are used to collect data from the farms.
- Advantages include low cost, scalable and mobility.
- Components of crowd sensing: Data processing technology, Incentive Mechanism, Crowd sensing software platform

Agriculture Data – Acquisition Interface

- Data Acquisition is an interface that is used to collect the data from the external environment and send it to the internal systems. Data acquisition technologies mainly includes:
 - ❑ Serial ports for connecting multiple instruments for automatic data acquisition.
 - ❑ USB interface.
 - ❑ Wireless communication modules.
 - ❑ Sensors and Actuators.
 - ❑ Satellite systems.

Agriculture Data – Storage

■ Data Storage Technology

- ❑ Direct Attached Storage (DAS): A storage device is attached directly to the host system to record data.
- ❑ Network Attached Storage (NAS): A device is connected to the network which serves the purpose of storage.
- ❑ Storage Area Network (SAN): A network of storage devices are connected to network of servers.

■ Databases are the software application used for performing data storage operations:

- ❑ Relational database : follows relational model
- ❑ Non-relational databases

Agriculture Data – Processing Technologies

- Millions of IoT devices → generates large amounts of data
- Need for efficient Big data analytics methods
- Artificial Intelligence plays a major role in extracting information from such large data.
- Conventional AI methods are resource intensive
- Tiny ML is a promising application in IoT based systems.

Learning Curve for Smart Agriculture can be Long

- Smart Agriculture requires setting up of IoT architecture and sensor networks.
- Errors in such setup can lead to drastic losses in the farms.
- Farmers should be thoroughly acquainted with usage of this technology.

Connectivity can be an Issue in Rural Areas

- Reliable internet connectivity is not possible in many of the remote villages in the world.
- Network performance and bandwidth requirements may not be achieved because lack of the infrastructure as in urban areas.
- Delay in real-time applications if computing is dependent on IoT-cloud.

Energy Depletion Risks

- Smart agriculture may reduce need for resources but needs lot of data centers.
- All the infrastructure used will consume large amounts of energy which may cause energy depletion.

Interoperability Can be an Issue for the Smart Agriculture Equipment

- Technologies used in Smart Agriculture are developing rapidly.
- Lack of technology standards → Interoperability issues.
- Creation of additional gateways to translate data between two systems is more common.
- Solution lies in making the standalone devices and gateways to farmer-friendly platforms.

Lack of Scalability and Configurability

- Farms can be any size, single owner can have large farms or several small farms.
- Same technology should be capable enough to handle different variety of farmlands in dimension and nature.
- Technologies used should be self-configurable.

Technical Failures

- Even most resilient systems will have failure due to unforeseen events.
- Such events in Smart Agriculture can incur large losses both in terms of money and quality of products.
- Food safety can be compromised because of such issues.

Bigdata Flow in Smart Agriculture

Source: A. Mitra, S. L. T. Vangipuram, A. K. Bapatla, V. K. V. V. Bathalapalli, **S. P. Mohanty**, E. Kougianos, and C. Ray, “Everything You wanted to Know about Smart Agriculture”, *arXiv Computer Science*, [arXiv:2201.04754](https://arxiv.org/abs/2201.04754), Jan 2022, 45-pages.

Security Issues in IoAT

- ❑ Smart Farms are Hackable Farms: IoT in Agriculture can improve the efficiency in productivity and feed 8.5 billion people by 2030. But it can also become vulnerable to various cyber security threats.

<https://spectrum.ieee.org/cybersecurity-report-how-smart-farming-can-be-hacked>

<https://cacm.acm.org/news/251235-cybersecurity-report-smart-farms-are-hackable-farms/fulltext>

- ❑ DHS report highlights that implementation of advanced precision farming technology in livestock monitoring and crop management sectors is also bringing new cybersecurity issues along with efficiency

https://www.dhs.gov/sites/default/files/publications/2018%20AEP_Threats_to_Precision_Agriculture.pdf

Smart Agriculture - Security Challenges

- Harsh Environment
- Threats from equipment
 - High voltage pulses
 - Interference
- Unauthorized access
- Interception of node communication
- Malicious data attacks
- Control system intrusion

Crop Damage and Disease Problem

- Disease prevents the growth of plants.
 - ❑ Affect quality of the crop.
 - ❑ Reduce final yield.
- Farmers need to –
 - ❑ Monitor the field regularly.
 - ❑ Detect disease early.
 - ❑ Identify the disease.
 - ❑ Know about the severity of the disease (many of them).
 - ❑ Determine the extent of damage (from disasters).

Our aGROdet: A Framework for Plant Disease Detection and Leaf Damage Estimation

- Detect plant diseases.
- Estimate corresponding leaf damage.
- Identification of the disease -
 - Convolutional neural network-based method.
- Estimation of the severity of leaf damage –
 - Pixel-based thresholding method.
- Regular monitoring of fields and checking conditions of the plants through **aGROdet** can detect the disease early.

Source: A. Mitra, **S. P. Mohanty**, and E. Kougianos, “aGROdet: A Novel Framework for Plant Disease Detection and Leaf Damage Estimation”, in *Proceedings of the IFIP International Internet of Things Conference (IFIP-IoT)*, 2022, pp. 3--22, DOI: https://doi.org/10.1007/978-3-031-18872-5_1.

Our aGROdet: Plant Disease Detection

- The augmented and preprocessed data is used for training the network.
- Adam optimizer with an initial learning rate of 0.001.
- Model trained for 75 epochs.
- Model trained with and without a reduced learning rate of factor 0.1.
- Trained model is saved for future inference.
- Model evaluated using unseen 5,562 images.
- Implemented in Keras with TensorFlow back end.

Source: A. Mitra, **S. P. Mohanty**, and E. Kougianos, “aGROdet: A Novel Framework for Plant Disease Detection and Leaf Damage Estimation”, in *Proceedings of the IFIP International Internet of Things Conference (IFIP-IoT)*, 2022, pp. 3--22, DOI: https://doi.org/10.1007/978-3-031-18872-5_1.

Our aGROdet: Damage Area Detection

Source: A. Mitra, **S. P. Mohanty**, and E. Kougianos, “aGROdet: A Novel Framework for Plant Disease Detection and Leaf Damage Estimation”, in *Proceedings of the IFIP International Internet of Things Conference (IFIP-IoT)*, 2022, pp. 3--22, DOI: https://doi.org/10.1007/978-3-031-18872-5_1.

Our aGROdet 2.0: An Automated Real Time Approach for Multiclass Plant Disease Detection

- Manual observation is still the most common method of detecting plant diseases.
 - ❑ Labor intensive.
 - ❑ Ineffective.
 - ❑ Requires expert services.
 - Expensive.
- Wrong identification causes wrong use of pesticides.
 - ❑ Causes secondary damage.
- Automatic and accurate monitoring of plant disease and damage estimation are necessary along with disease identification.

Source: A. Mitra, **S. P. Mohanty**, and E. Kougianos, "A Smart Agriculture Framework to Automatically Track the Spread of Plant Diseases using Mask Region-based Convolutional Neural Network", in *Proceedings of the IFIP International Internet of Things Conference (IFIP-IoT)*, 2022, pp. 68--85, DOI: https://doi.org/10.1007/978-3-031-18872-5_5.

Our aGROdet 2.0: An Automated Real-Time Approach for Multiclass Plant Disease Detection

- Photo of the leaves are taken.
- They are resized to 256x256 to be detected using the trained model.
- A Mask Region-based Convolutional Neural Network (R-CNN) is used to detect the disease along with the disease localization.
- Here, the problem is considered as an object detection problem.
- Object detection is a task in computer vision that involves identifying the presence of one or more items in each image as well as their location and the category of object that they belong to.

Our sFarm: Solution

- Tangle is a data structure behind the IOTA which is a Directed Acyclic Graph (DAG).
- Directed Acyclic Graphs (DAG) are the data structures which grow in one direction and doesn't have cyclic structures within.
- Tangle is maintained and updated at all the nodes in the network.
- Any new transaction is published will be attached to the Tangle tips.
- Will be single source of truth.

Food Safety and Quality

Food Safety Vs Food Quality

How can we stay vigilant when developing and manufacturing products in this new world ?

Am I eating a fish that is safe for my body?

Poultry Safety and Quality?

Poultry & Eggs

Chickens, turkeys, ducks, geese, and other fowl are considered poultry. Chickens are the most plentiful type of poultry raised for meat and egg production in Kentucky.

Broiler or Layer?

While all chickens can be raised for meat, and all female chickens (hens) lay eggs, certain breeds of chickens are better suited for each purpose.

Broilers:

- Grow quickly and will reach their full size in less than 8 weeks - between 3 and 7 pounds depending on their use.
- Are not raised in cages, but are allowed to roam temperature-controlled houses, yards, or on pastures.
- Are never given hormones or steroids.

Layers:

- Hens will begin to lay eggs when they are 18 to 26 weeks old.
- May be kept in cages for ease of feeding and collecting eggs, or they may be kept in open houses, yards, or on pastures with laying boxes near by.
- Commercial laying hens are typically used for meat after they have reached 2 years of age or when egg production begins to decline.
- Are never given hormones or steroids.

Chickens are able to convert their feed to high-quality protein that provides us essential amino acids, B vitamins and minerals, such as iron and zinc.

In the past many households kept chickens for eggs and an occasional dinner. The modern chicken industry, however, produces nutritious, wholesome, high quality products that become more affordable year after year.

\$ Eggs are the most economical high-quality protein available. Chicken meat is third, behind cow's milk.

Egg Nutrition Facts

For only 70 calories each, eggs are rich in nutrients. They contain, in varying amounts, almost every essential vitamin and mineral needed by humans as well as several other beneficial food components. Egg protein is the standard by which other protein sources are measured. A large egg contains over six grams of protein.

The average laying hen lays 286 eggs per year.

Commercial egg production is quite automated and works to improve food safety and sanitation. Houses also protect birds from predators and many diseases.

Turkeys are raised similarly to broilers, but they will grow for 3 to 6 months and weigh 15 to 30 pounds.

World average consumption per person per year: 161 eggs (2018 data)

Food Safety and Security

- Changes in:
 - ❑ Climate-smart farming
 - ❑ Eco-friendly farming
- Improved:
 - ❑ Larger growth
 - ❑ Economic stability of farmers

Food Labelling

- Changes in:
 - ❑ Bar code usage
 - ❑ 2D visual tags
 - ❑ Efficient warehouse management
 - ❑ Tag base identification technologies
- Improved:
 - ❑ Well organized fields
 - ❑ Time saving

Our Food-Care: A Device for Detection of Fertilizer Contamination in Fruits and Vegetables

Quartz cuvettes of length 10mm for sample solution.

Our Food-Care Device

Contamination Level

- Acceptable
- Moderate
- Severe
- Dangerous

Peak absorbance spectrum of 265nm at different nitrate concentrations.

Need for Device which is:

- ✓ Portable
- ✓ Works with dry or wet samples
- ✓ User safe
- ✓ Accurate
- ✓ IoT-Enable

Imbalance Diet is a Global Issue

- Imbalanced diet can be either more or fewer of certain nutrients than the body needs.
- In 2017, 11 million deaths and 255 million disability-adjusted life-years (DALYs) were attributable to dietary risk factors.
- Eating wrong type of food is potential cause of a dietary imbalance:

Smart Agriculture – Supply Chain

Transparent Supply Chain

- Execution errors – like mistakes in inventory data, Missing shipments and duplicate payments are difficult to detect in real-time.
- For companies with large number of transactions each day, it is difficult to assess and fix these issues.

Smart Agriculture and Federated Learning

Smart Agriculture – AI/ML Workflow

[Source: Alakananda Mitra, “Machine Learning Methods for Data Quality Aspects in Edge Computing Platforms,” PhD Dissertation, UNT, 2022.]

TinyML - Key for Smart Cities and Smart Villages

TRAIN: Iterate until you achieve satisfactory performance.

Needs Significant:

- Computational Resource
- Computation Energy

Solution: Reduce Training Time and/or Computational Resource

PREDICT: Integrate trained models into applications.

Needs:

- Computational Resource
- Computation Energy

Solution: TinyML

Source: <https://www.mathworks.com/campaigns/offers/mastering-machine-learning-with-matlab.html>

What is Federated Learning (FL) ?

- ❑ Federated Learning is way of model training in ML for heterogeneous and distributed data.
- ❑ It preserves the Privacy of data.
- ❑ Data does not come to the Model. Here Model is taken to the data.

Source: Z. Li, V. Sharma, and S. P. Mohanty, "Preserving Data Privacy via Federated Learning: Challenges and Solutions", *IEEE Consumer Electronics Magazine*, Vol. 9, No. 3, May 2020, pp. 8--16.

Motivation of Federated Learning (FL)

- Quality data exists at different location on various edge devices.
- Data privacy laws control the movement of data.
- FL is the way to provide ML solution without breaking privacy laws.

Source: Z. Li, V. Sharma, and S. P. Mohanty, "Preserving Data Privacy via Federated Learning: Challenges and Solutions", *IEEE Consumer Electronics Magazine*, Vol. 9, No. 3, May 2020, pp. 8--16.

Collaborative Edge Computing is Cost Effective Sustainable Computing for Smart Villages

Collaborative edge computing connects the IoT-edges of multiple organizations that can be near or far from each other
→ Providing bigger computational capability at the edge with lower design and operation cost.

Source: D. Puthal, M. S. Obaidat, P. Nanda, M. Prasad, S. P. Mohanty, and A. Y. Zomaya, "Secure and Sustainable Load Balancing of Edge Data Centers in Fog Computing", *IEEE Communications Mag*, Vol. 56, No 5, May 2018, pp. 60--65.

Collaborative Edge Computing is Cost Effective Sustainable Computing for Smart Villages

-  Collaborative Edge Computing is a distributed processing environment
-  CEC is a collaboration of distributed edge
-  Smart control of heterogenous network
-  Reduced Bandwidth and Transmission costs
-  CEC enables seamless processing through load balancing

Conclusion

- Smart Agriculture is a very needed advancement for sustainability of humans in coming years.
- Technologies in Smart Agriculture are improving, and new technologies are being introduced everyday.
- Smart agriculture research is very challenging as involves diverse form of life (plant, animal ...) and stake holder (farmer, engineers, distributor, insurance ...).
- Having A-CPS with limited network connectivity and power supply is challenging.
- Educating farmers is the main challenge.
- Not many years far from realizing dream of hunger free society.

Future Research

- Research in educating farmers with technology usage.
- Efficient energy consumption techniques as millions of IoT devices will involve.
- Blockchain in transparent chains for increasing consumer awareness and safety.
- Efficient sensors and actuator technologies.
- Big data analytics and AI methods.
- Communication and Connectivity Technologies
- Secure and privacy compliance approaches.
