

# Security-by-Design (SbD) for Integrated Robust Cybersecurity of CPS

Invited Talk 2023 – VIT University, AP

Guntur, India, 22 July 2023

Homepage

Prof./Dr. Saraju Mohanty  
University of North Texas, USA.

# Outline

- IoT/CPS – Big Picture
- Challenges in IoT/CPS Design
- Cybersecurity Solution for IoT/CPS
- Drawbacks of Existing Cybersecurity Solutions
- Security-by-Design (SbD) – The Principle
- Security-by-Design (SbD) - Specific Examples
- Physical Unclonable Function (PUF) – Introduction
- PUF – Types and Topologies
- PUF - Characteristics
- PUF - Challenges and Research
- Conclusion

---

# The Big Picture

# Issues Challenging City Sustainability

Pollution

Water Crisis

Energy Crisis

Traffic

# Smart City Technology - As a Solution

- **Smart Cities:** For effective management of limited resource to serve largest possible population to improve:

- ❑ Livability
- ❑ Workability
- ❑ Sustainability

At Different Levels:

- Smart Village
- Smart State
- Smart Country

➤ **Year 2050: 70% of world population will be urban**

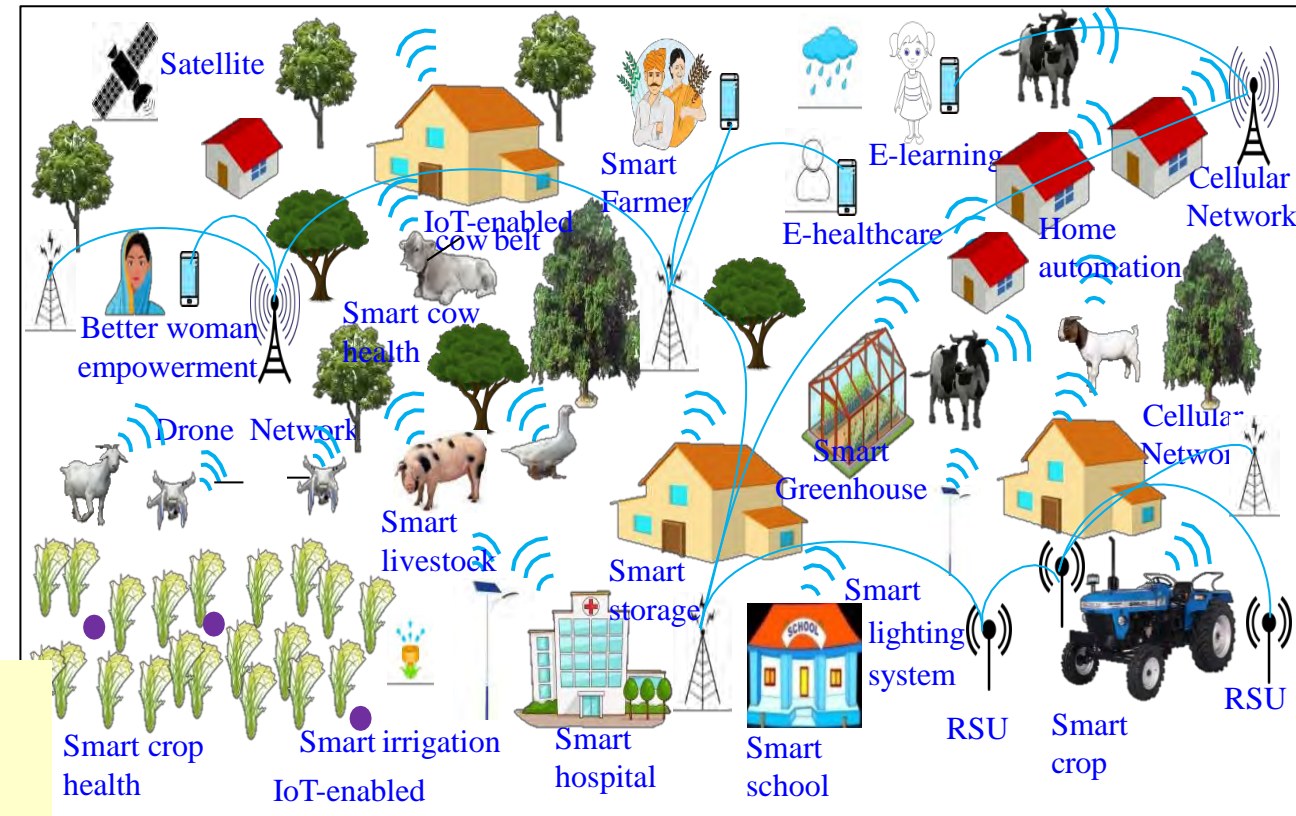

Source: S. P. Mohanty, U. Choppali, and E. Kougianos, "Everything You wanted to Know about Smart Cities", *IEEE Consumer Electronics Magazine*, Vol. 5, No. 3, July 2016, pp. 60--70.

# Smart Cities Vs Smart Villages

Source: <http://edwingarcia.info/2014/04/26/principal/>

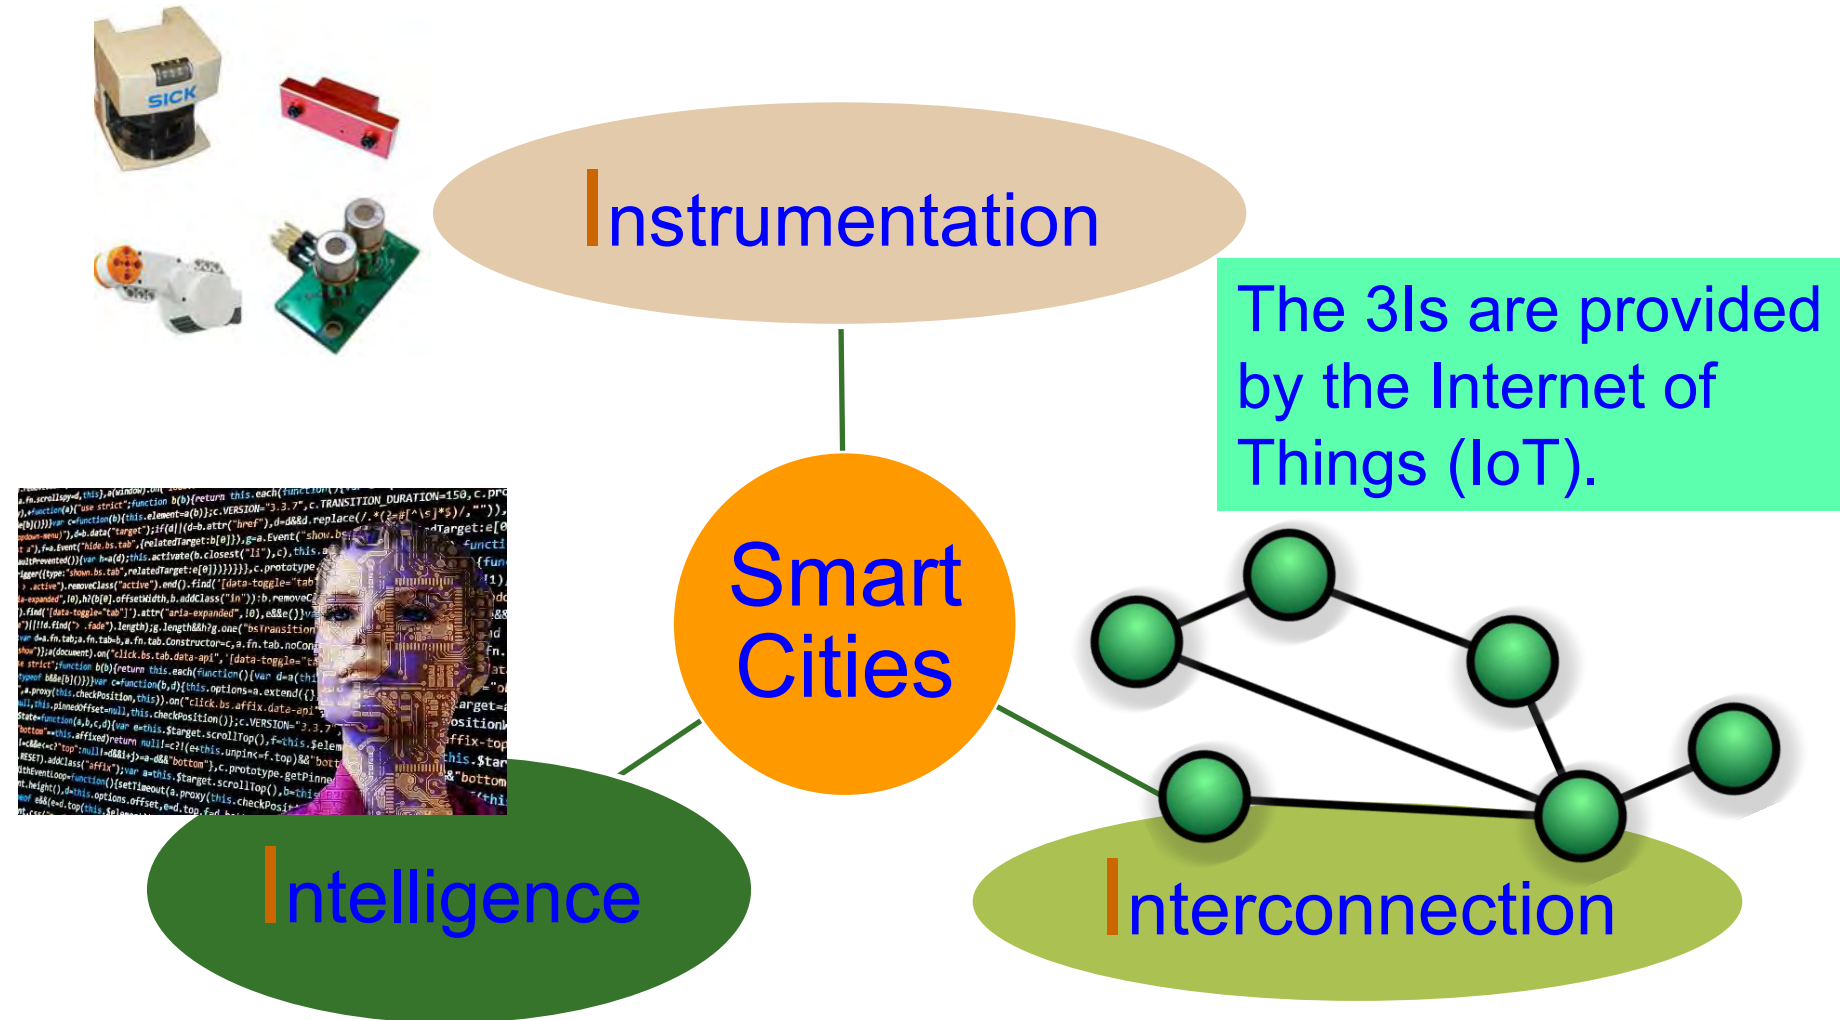

Source; P. Chanak and I. Banerjee, "Internet of Things-enabled Smart Villages: Recent Advances and Challenges," *IEEE Consumer Electronics Magazine*, DOI: 10.1109/MCE.2020.3013244.

**Smart Cities**  
CPS Types - More  
Design Cost - High  
Operation Cost – High  
Energy Requirement - High

**Smart Villages**  
CPS Types - Less  
Design Cost - Low  
Operation Cost – Low  
Energy Requirement - Low

# Smart Cities or Smart Villages - 3 Is

Source: Mohanty ISC2 2019 Keynote

# Cyber-Physical Systems (CPS) - 3 Cs

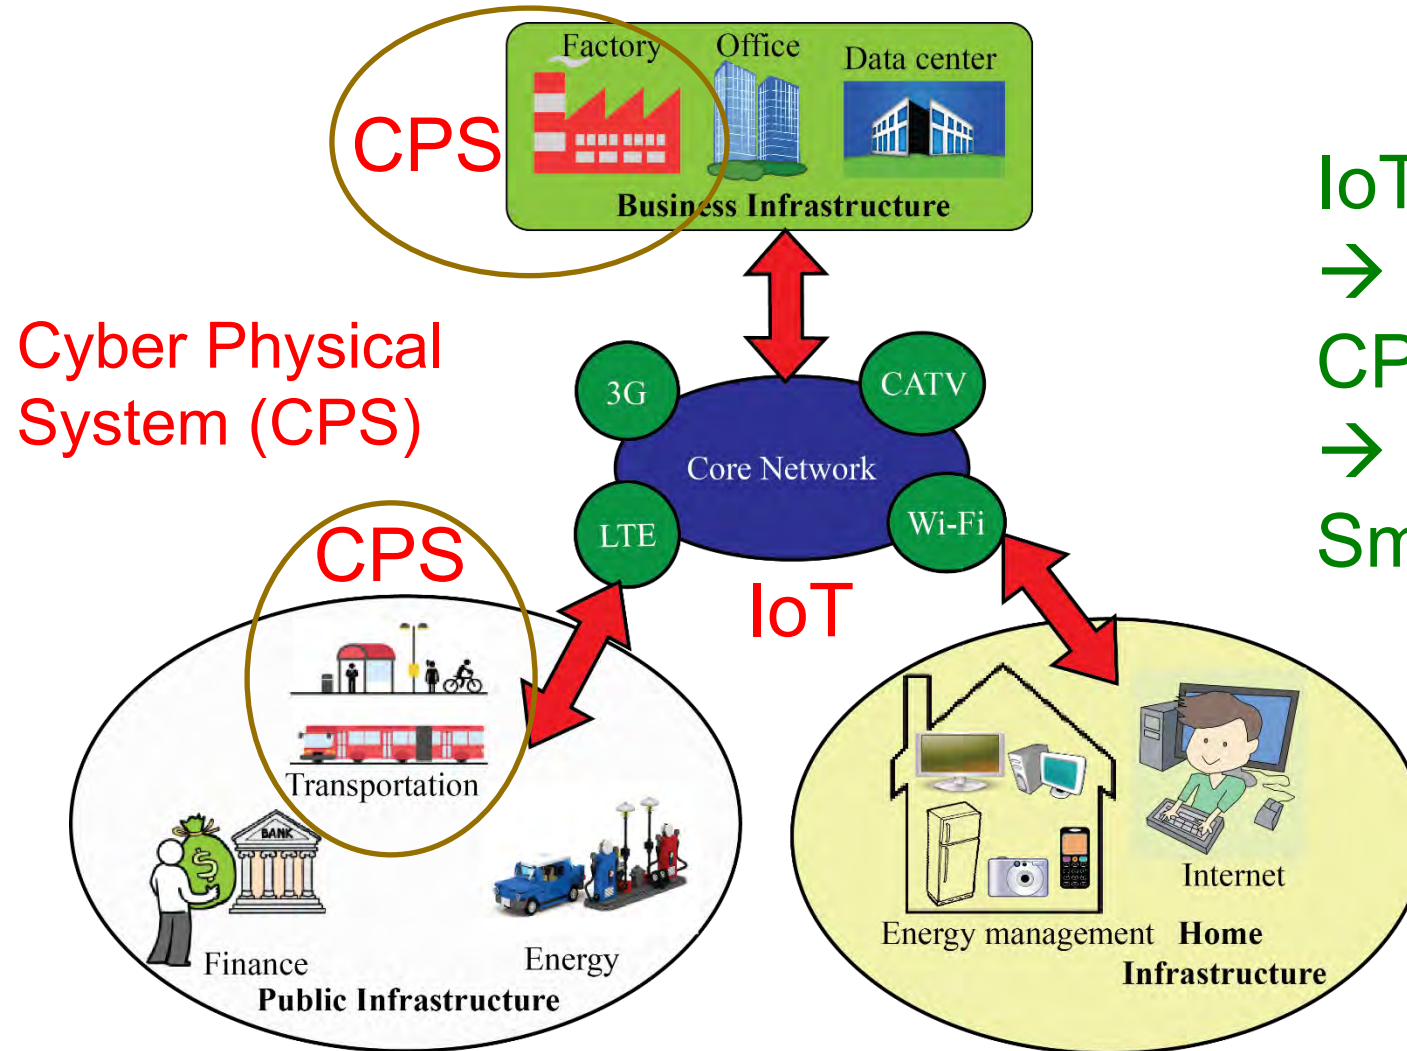

IoT/CPS is needed in both smart cities and smart villages.

## 3 Cs of IoT - Connect, Compute, Communicate

Source: G. Jinghong, H. Ziwei, Z. Yan, Z. Tao, L. Yajie and Z. Fuxing, "An overview on cyber-physical systems of energy interconnection," in *Proc. IEEE International Conference on Smart Grid and Smart Cities (ICSGSC)*, 2017, pp. 15-21.

# IoT → CPS → Smart Cities or Smart Villages

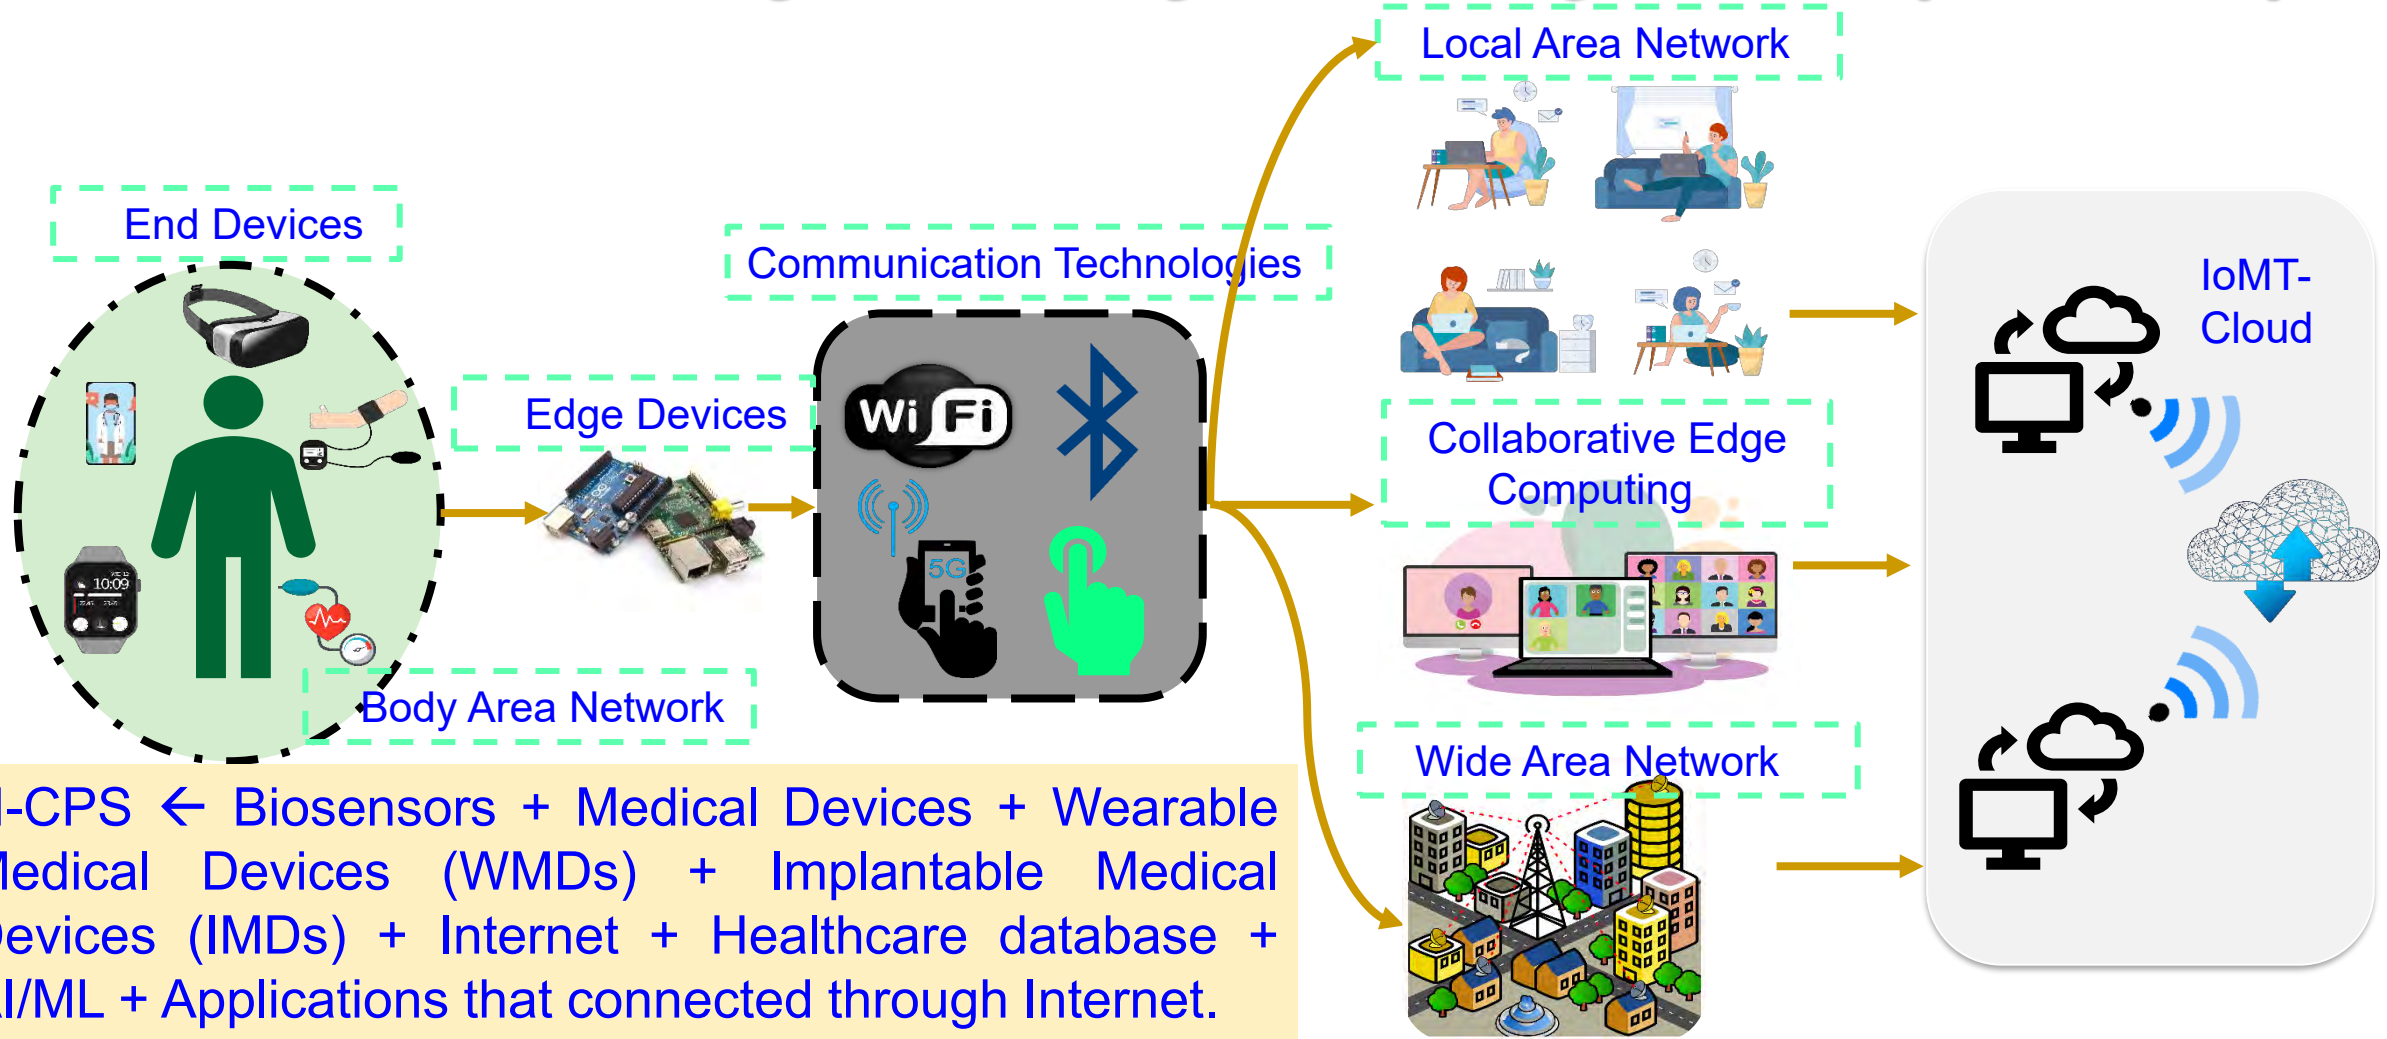

IoT  
→  
CPS (Smart Components)  
→  
Smart Cities or Smart Villages

IoT is the backbone

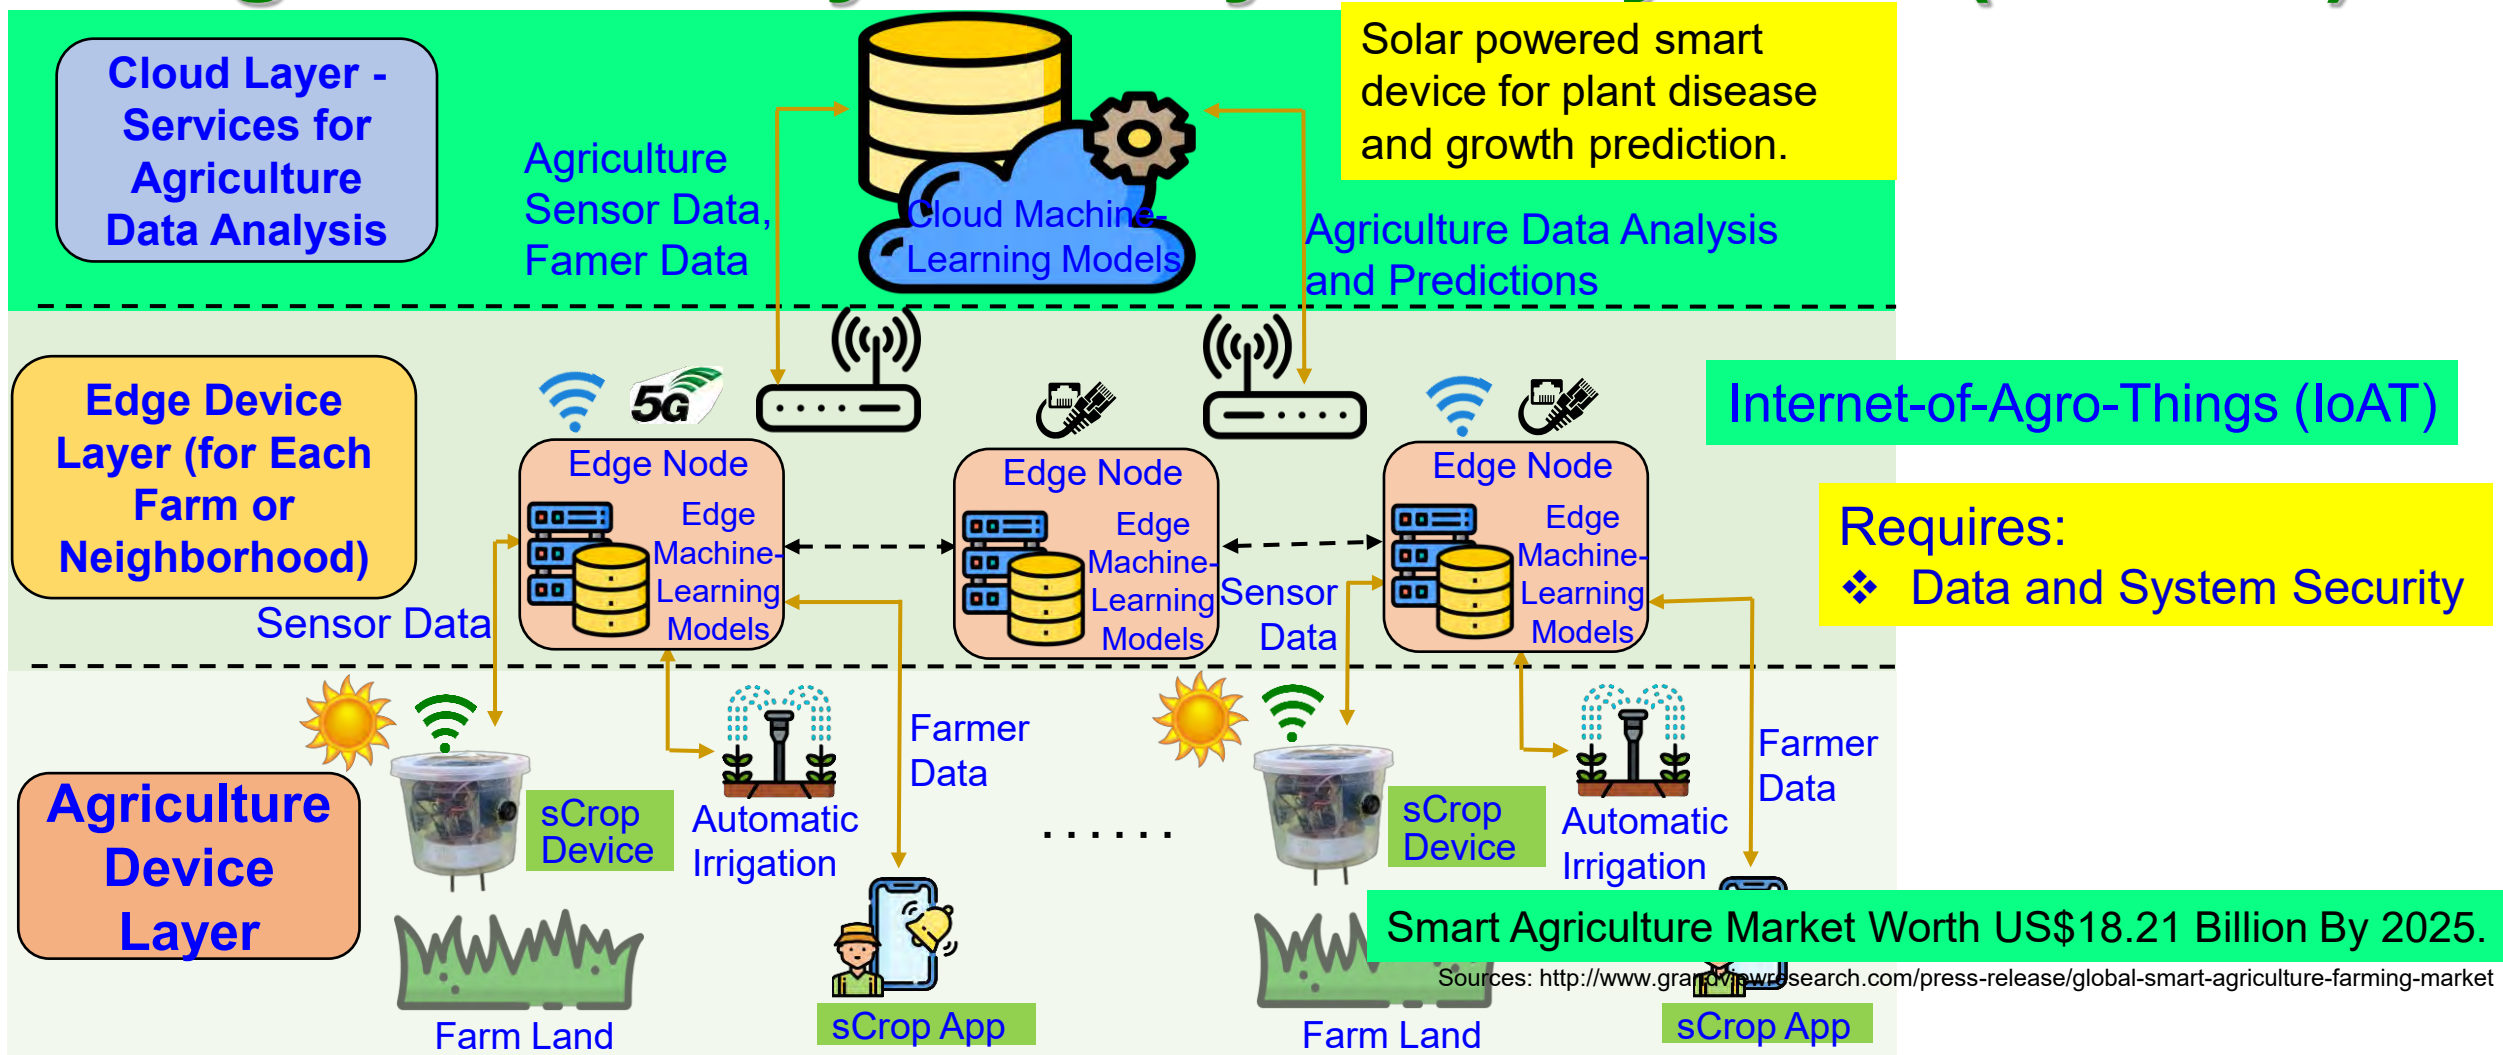

Source: S. P. Mohanty, U. Choppali, and E. Kougianos, "Everything You wanted to Know about Smart Cities", *IEEE Consumer Electronics Magazine*, Vol. 5, No. 3, July 2016, pp. 60--70.

# Healthcare Cyber-Physical System (H-CPS)

Frost and Sullivan predicts smart healthcare market value to reach US\$348.5 billion by 2025.

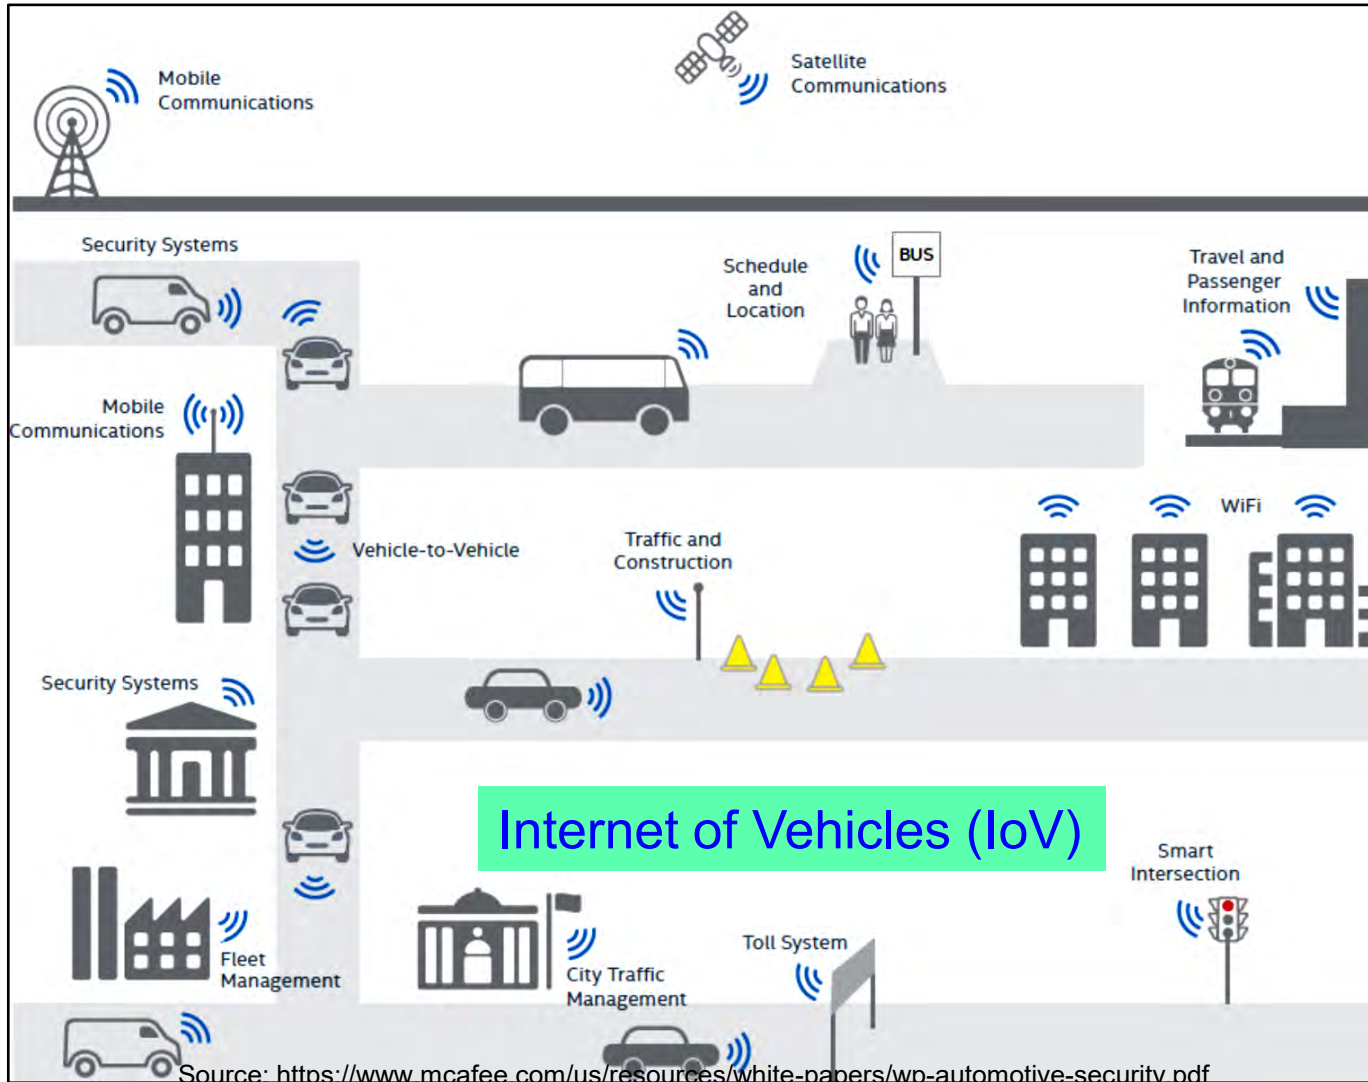

# Agriculture Cyber-Physical System (A-CPS)

Source: V. Udutalapally, S. P. Mohanty, V. Pallagani, and V. Khandelwal, "sCrop: A Novel Device for Sustainable Automatic Disease Prediction, Crop Selection, and Irrigation in Internet-of-Agro-Things for Smart Agriculture", *IEEE Sensors Journal*, Vol. 21, No. 16, August 2021, pp. 17525--17538, DOI: 10.1109/JSEN.2020.3032438.

# Transportation Cyber-Physical System (T-CPS)

## IoT Role Includes:

- Traffic management
- Real-time vehicle tracking
- Vehicle-to-Vehicle communication
- Scheduling of train, aircraft
- Automatic payment/ticket system
- Automatic toll collection

## Requires:

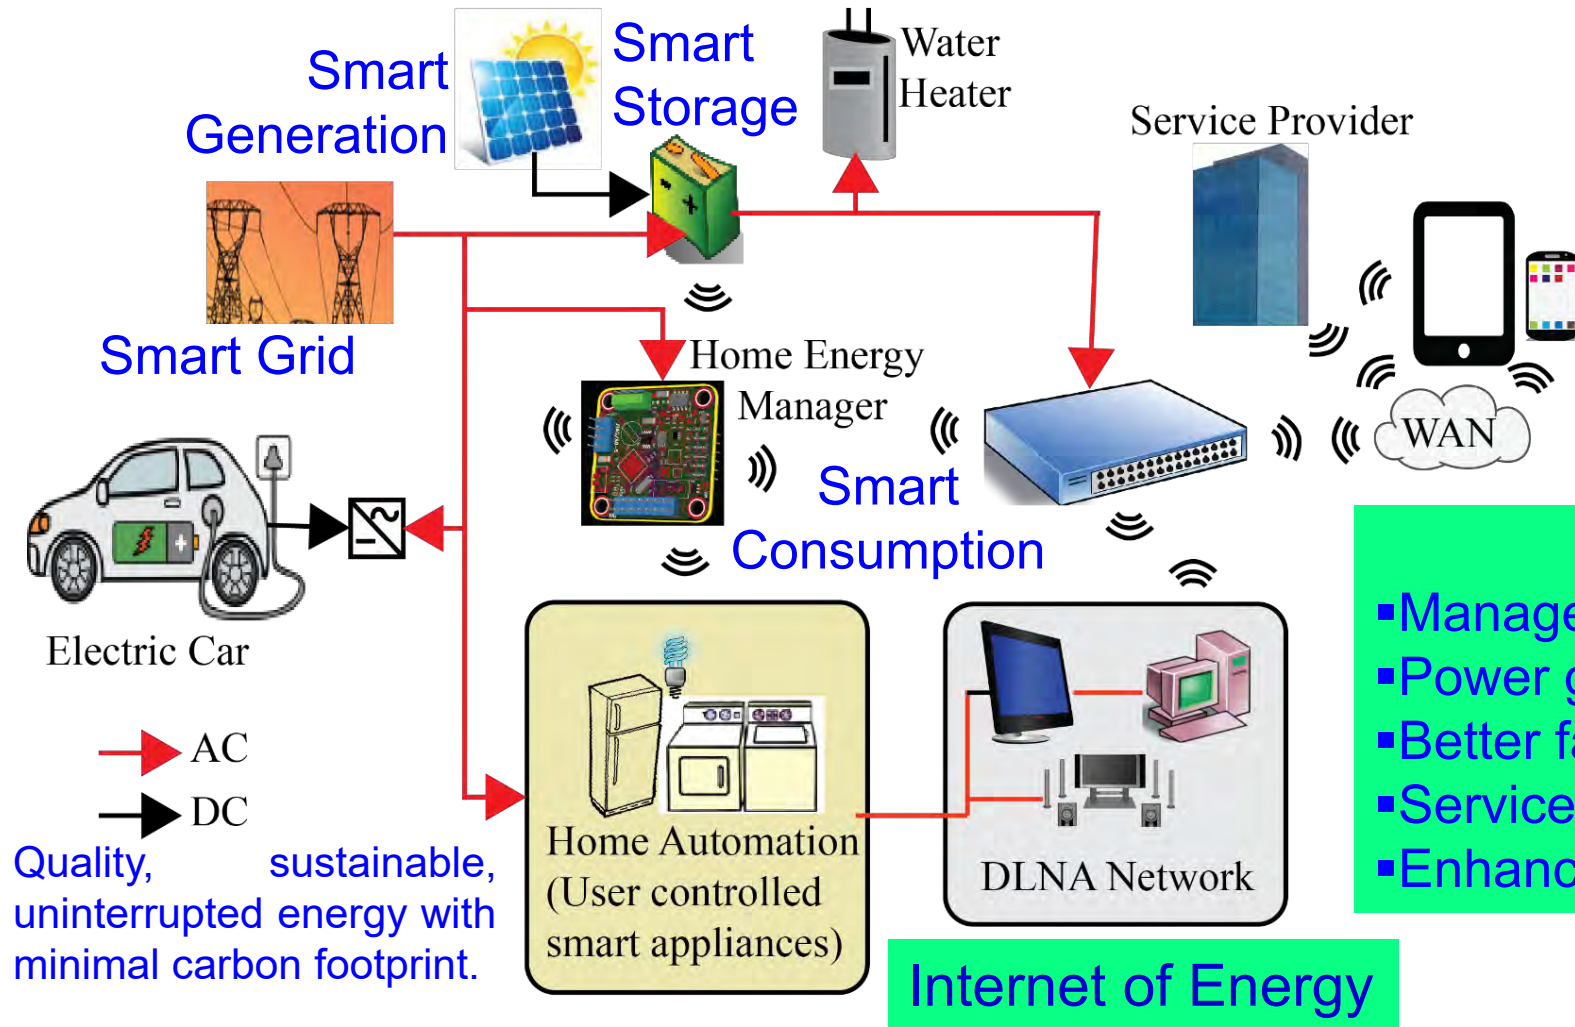

- ❖ Data, Device, and System Security
- ❖ Location Privacy

“The global market of IoT based connected cars is expected to reach \$46 Billion by 2020.”

Source: Datta 2017, CE Magazine Oct 2017

# Energy Cyber-Physical System (E-CPS)

Requires:

❖ Data, Device, and System Security

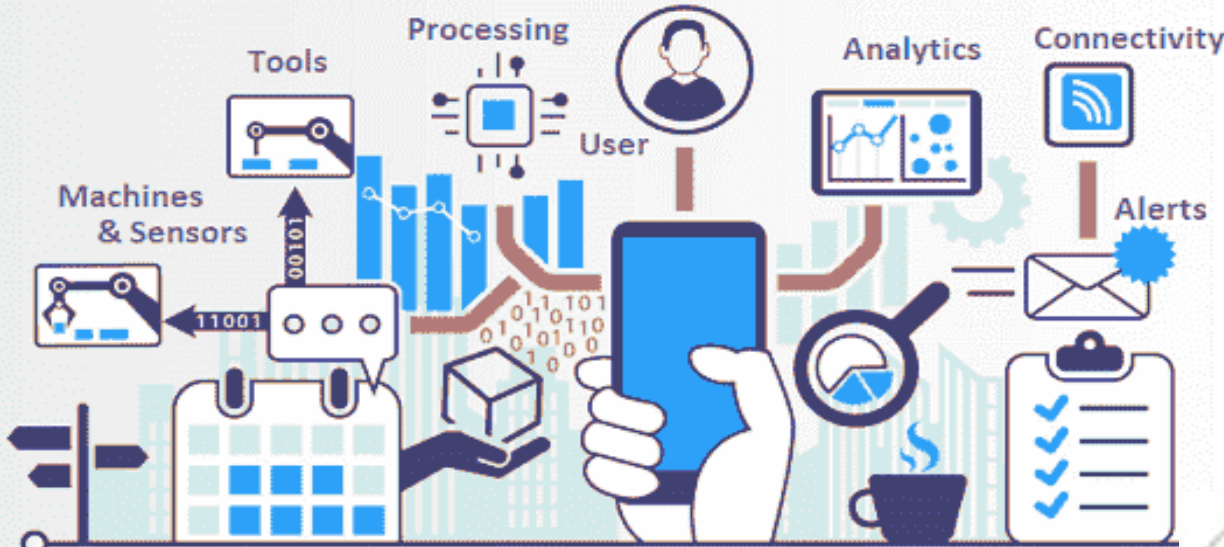

IoT Role:

- Management of energy usage
- Power generation dispatch for solar, wind, etc.
- Better fault-tolerance of the grid
- Services for plug-in electric vehicles (PEV)
- Enhancing consumer relationships

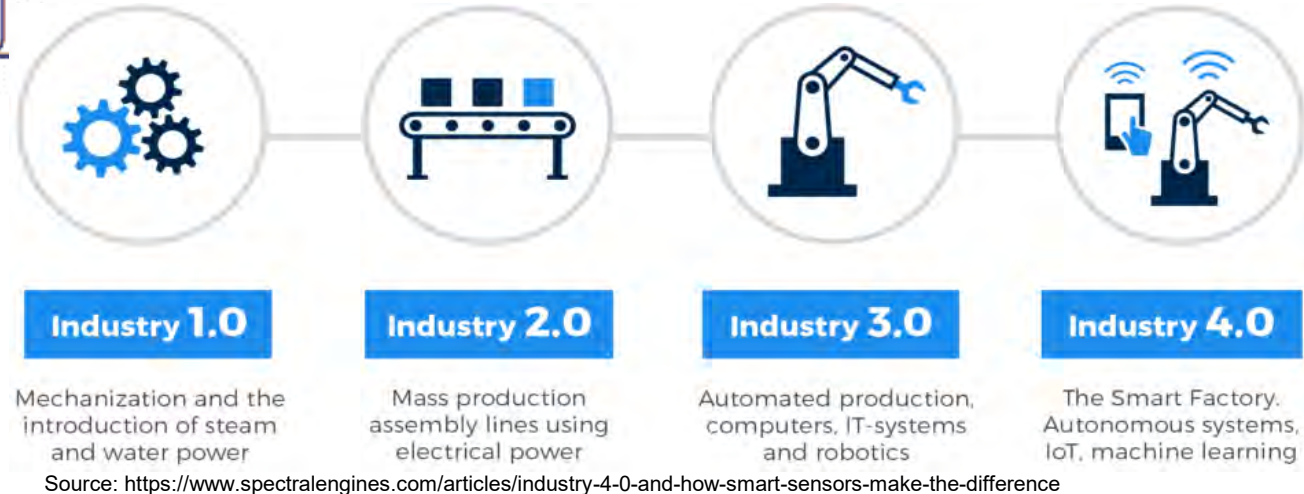

Source: S. P. Mohanty, U. Choppali, and E. Kougianos, "Everything You wanted to Know about Smart Cities", *IEEE Consumer Electronics Magazine*, Vol. 5, No. 3, July 2016, pp. 60--70.

# Industrial Internet of Things (IIoT)

## Industrial Internet of Things

# Security Challenges – Information

Online Banking

**Hacked: LinkedIn, Tumblr, & Myspace**

**LinkedIn** **tumblr.** **myspace**

**Who did it:** A hacker going by the name Peace.  
**What was done:** 500 million passwords were stolen.

**Details:** Peace had the following for sale on a Dark Web Store:

- 167 million LinkedIn passwords
- 360 million Myspace passwords
- 68 million Tumblr passwords
- 100 million VK.com passwords
- 71 million Twitter passwords

Personal Information

Credit Card Theft

Credit Card/Unauthorized Shopping

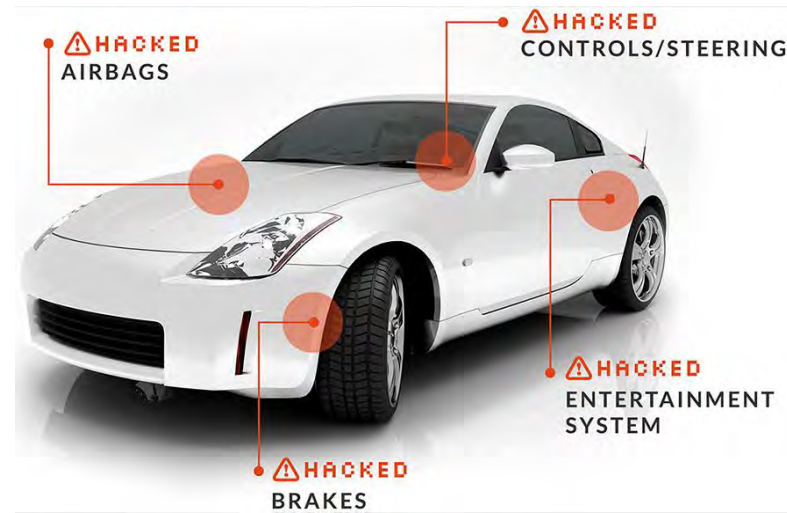

# Cybersecurity Challenges - System

## Power Grid Attack

Source: <http://www.csoonline.com/article/3177209/security/why-the-ukraine-power-grid-attacks-should-raise-alarm.html>

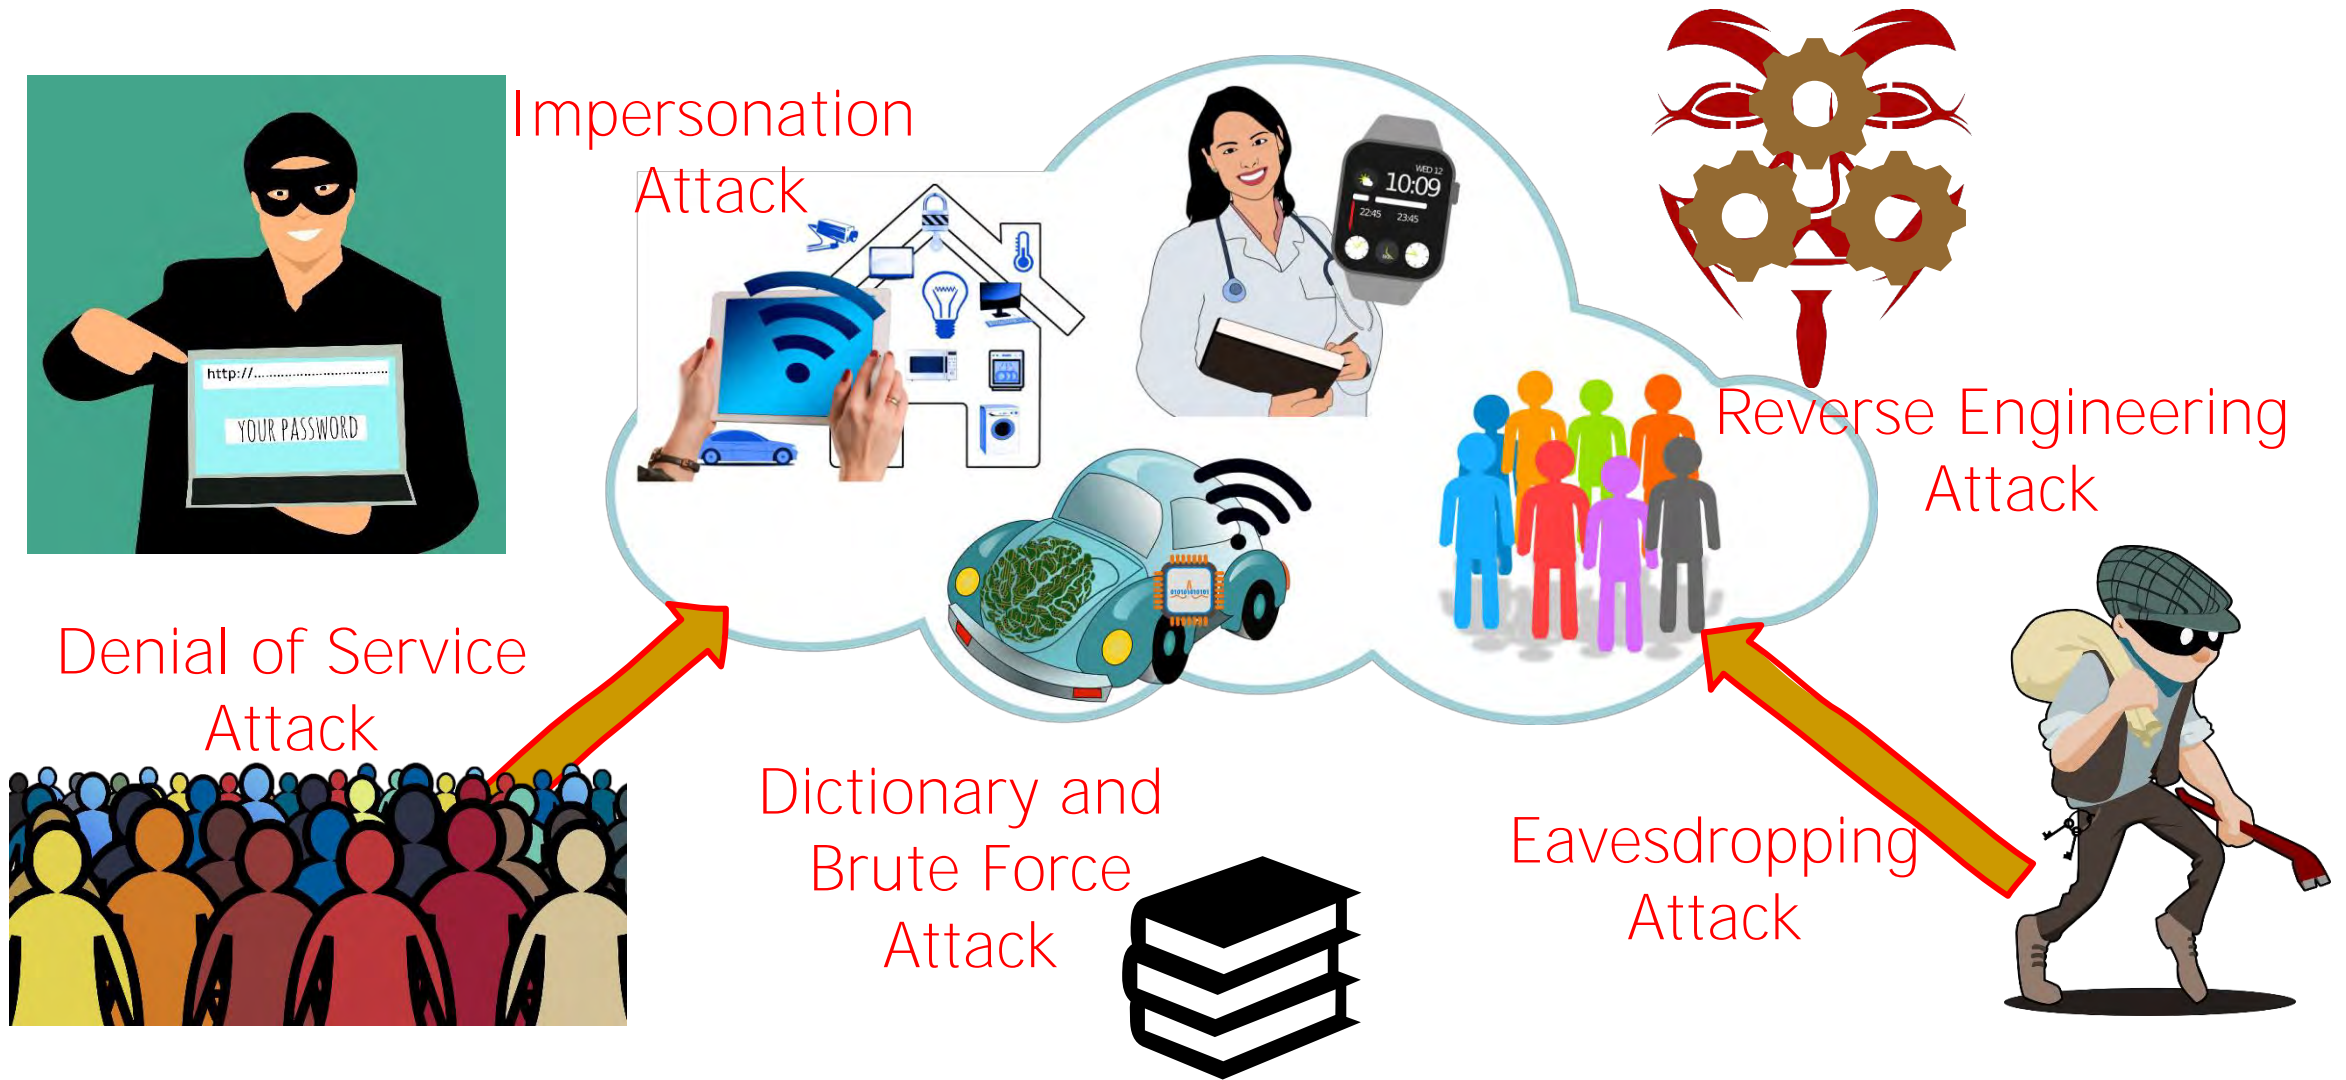

Source: <http://money.cnn.com/2014/06/01/technology/security/car-hack/>

# Attacks on IoT Devices

# Smart Healthcare - Cybersecurity and Privacy Issue

## Selected Smart Healthcare Security/Privacy Challenges

Data Eavesdropping

Data Confidentiality

Data Privacy

Location Privacy

Identity Threats

Access Control

Unique Identification

Data Integrity

Device Security

Impersonation Attacks

Eavesdropping Attacks

Reverse Engineering Attacks

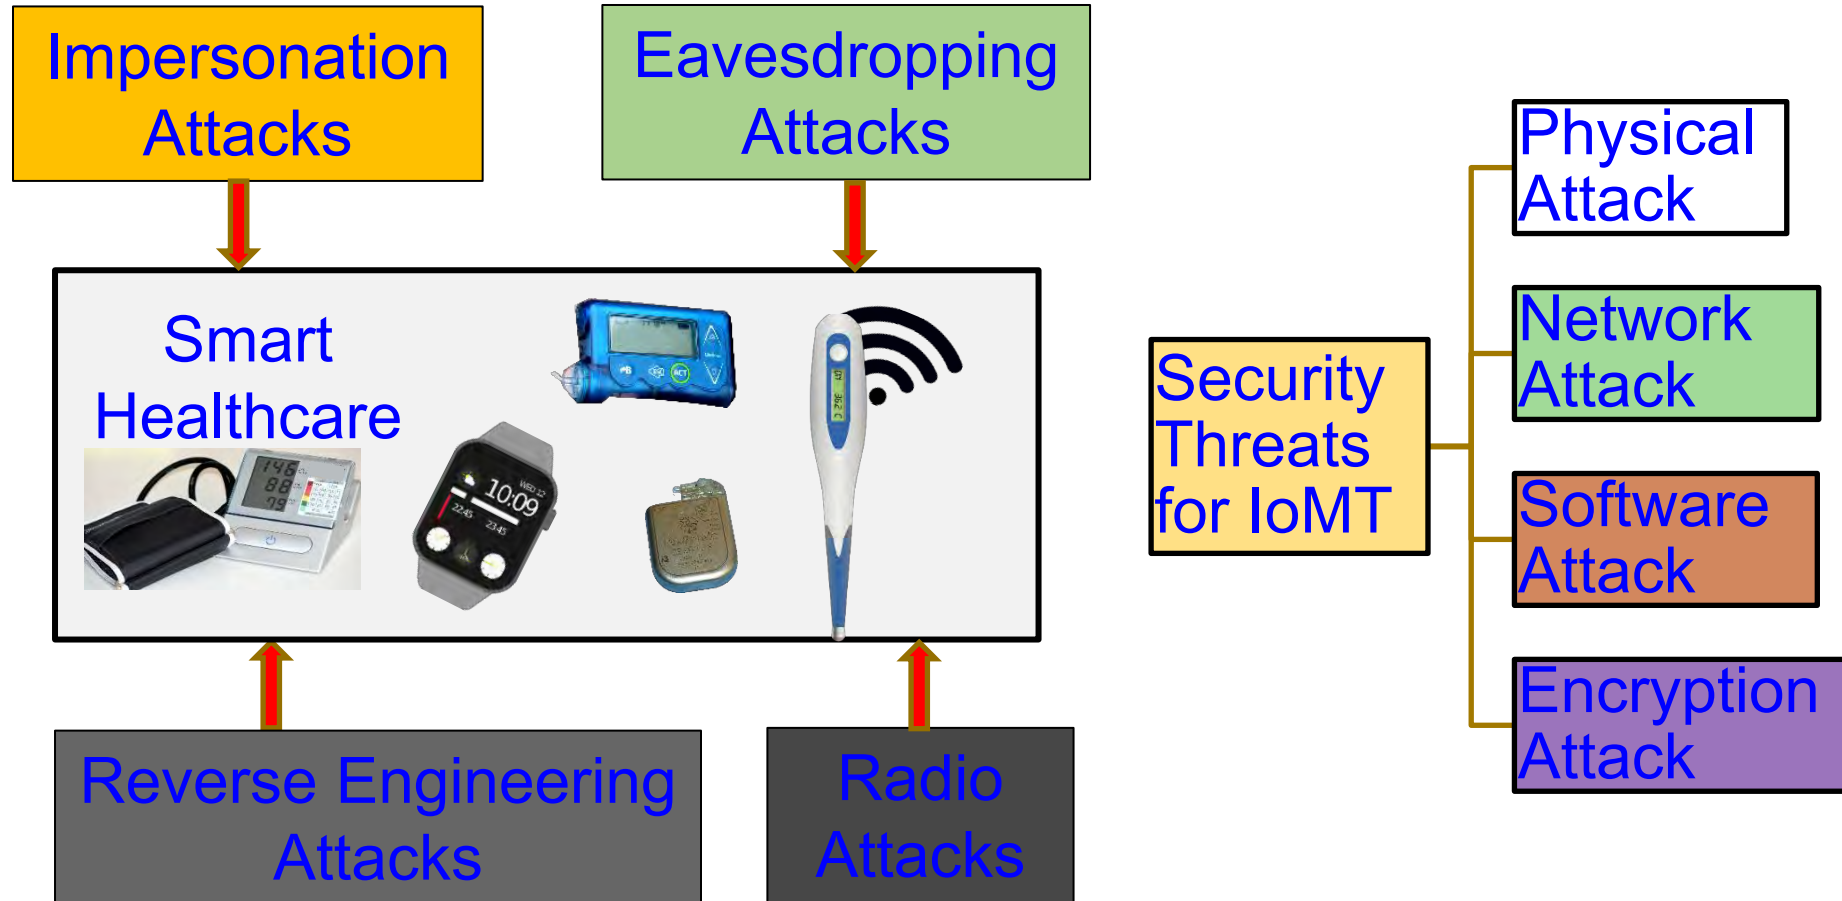

Radio Attacks

## HIPPA Privacy Violation by Types

# IoMT Security – Selected Attacks

Source: V. P. Yanambaka, S. P. Mohanty, E. Kougianos, and D. Puthal, "PMsec: Physical Unclonable Function-Based Robust and Lightweight Authentication in the Internet of Medical Things", *IEEE Transactions on Consumer Electronics (TCE)*, Volume 65, Issue 3, August 2019, pp. 388--397.

# IoMT/H-CPS Security Issue is Real and Scary

- Insulin pumps are vulnerable to hacking, FDA warns amid recall:

<https://www.washingtonpost.com/health/2019/06/28/insulin-pumps-are-vulnerable-hacking-fda-warns-amid-recall/>

- Software vulnerabilities in some medical devices could leave them susceptible to hackers, FDA warns:

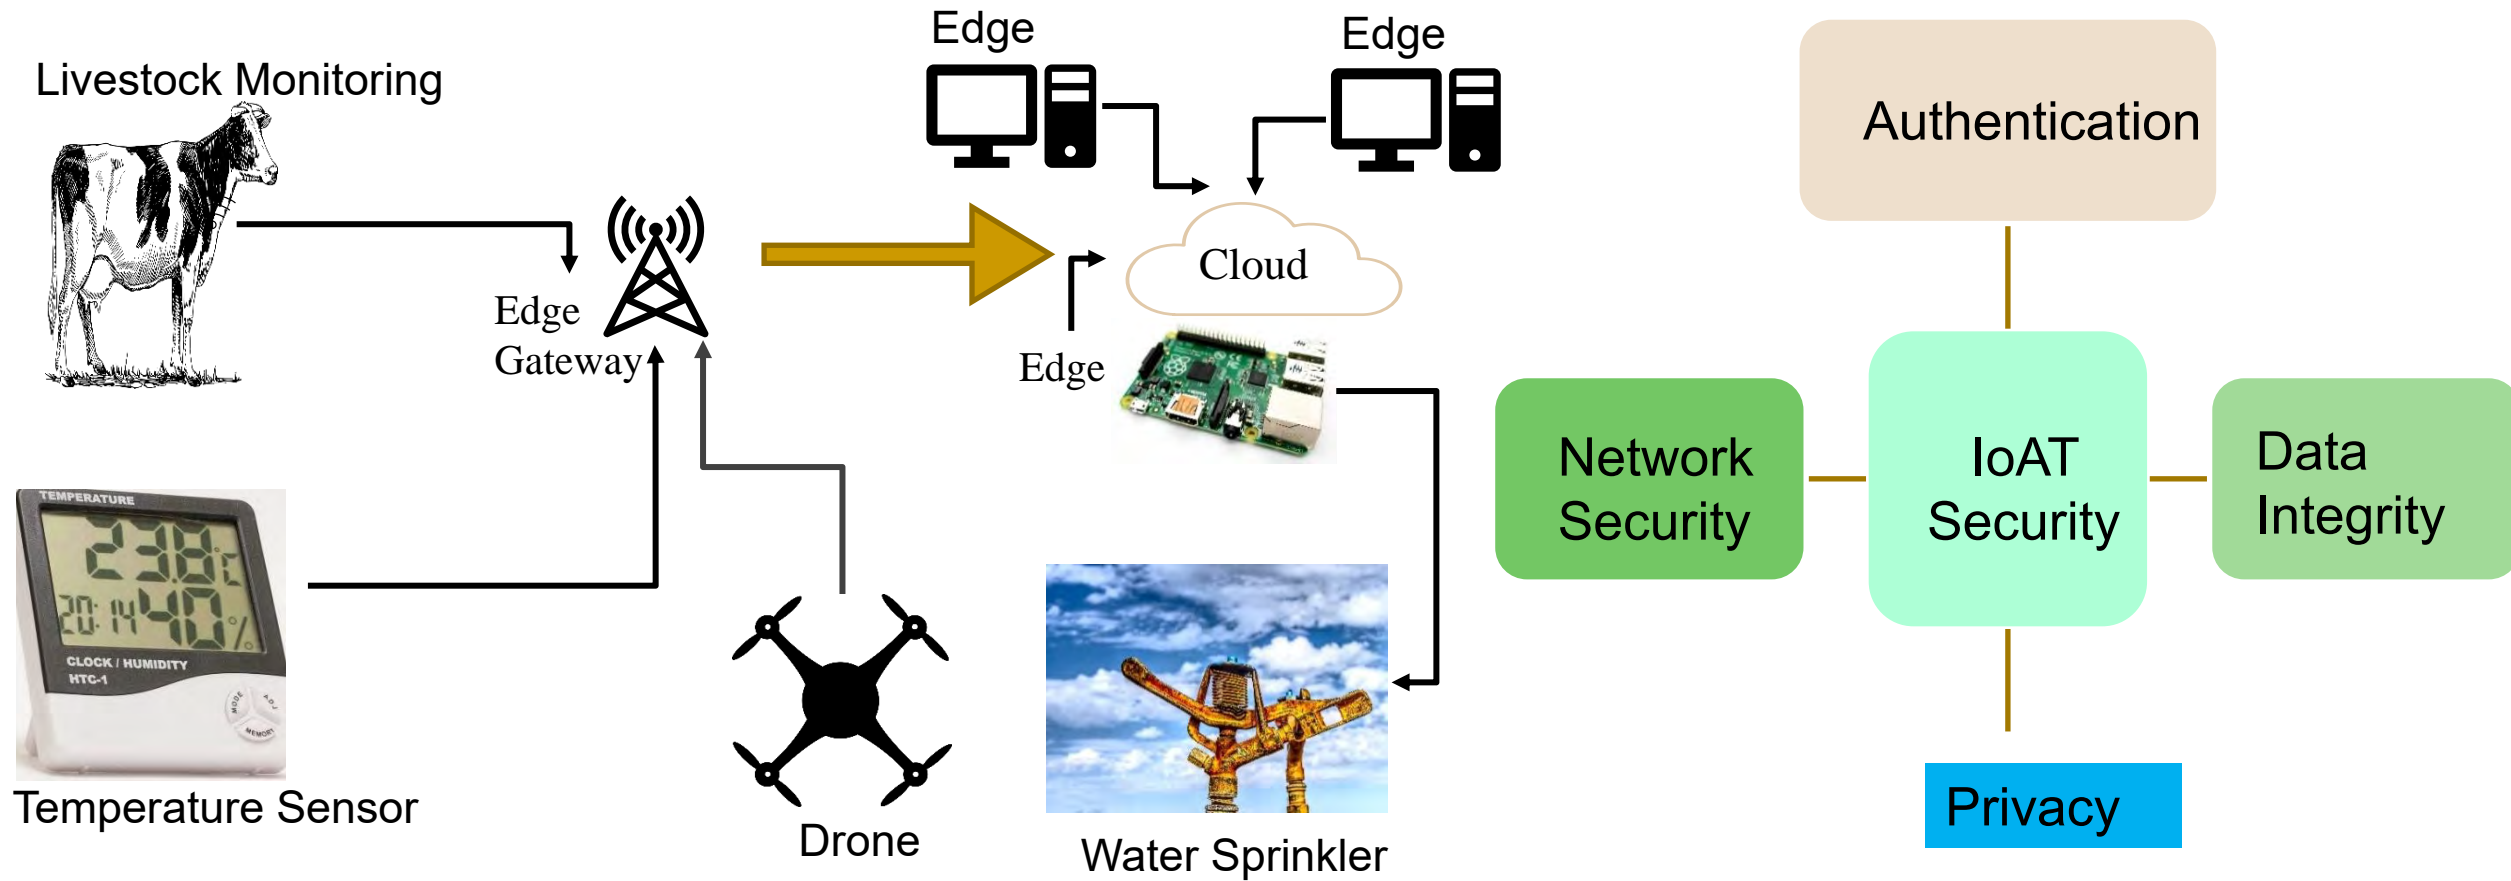

<https://www.cnn.com/2019/10/02/health/fda-medical-devices-hackers-trnd/index.html>

- FDA Issues Recall For Medtronic mHealth Devices Over Hacking Concerns:

<https://mhealthintelligence.com/news/fda-issues-recall-for-medtronic-mhealth-devices-over-hacking-concerns>

# Internet of Agro-Things (IoAT) - Cybersecurity Issue

Source: V. K. V. V. Bathalapalli, S. P. Mohanty, E. Kougianos, V. P. Yanambaka, B. K. Baniya and B. Rout, "A PUF-based Approach for Sustainable Cybersecurity in Smart Agriculture," in *Proc. 19th OITS International Conference on Information Technology (OCIT)*, 2021, pp. 375-380, doi: 10.1109/OCIT53463.2021.00080.

# Security Issues in IoAT

- ❑ Smart Farms are Hackable Farms: IoT in Agriculture can improve the efficiency in productivity and feed 8.5 billion people by 2030. But it can also become vulnerable to various cyber security threats.

<https://spectrum.ieee.org/cybersecurity-report-how-smart-farming-can-be-hacked>

<https://cacm.acm.org/news/251235-cybersecurity-report-smart-farms-are-hackable-farms/fulltext>

- ❑ DHS report highlights that implementation of advanced precision farming technology in livestock monitoring and crop management sectors is also bringing new security issues along with efficiency

[https://www.dhs.gov/sites/default/files/publications/2018%20AEP\\_Threats\\_to\\_Precision\\_Agriculture.pdf](https://www.dhs.gov/sites/default/files/publications/2018%20AEP_Threats_to_Precision_Agriculture.pdf)

# Smart Agriculture - Security Challenges

- Access Control
  - ❑ Develop farm specific access control mechanisms.
  - ❑ Develop data sharing and ownership policies.
- Trust
  - ❑ Prevent insider data leakage.
  - ❑ Zero day attack detection.
- Information Sharing
- Machine Learning and Artificial Intelligence Attacks
- Next Generation Network Security implementation
- Trustworthy Supply chain and Compliance

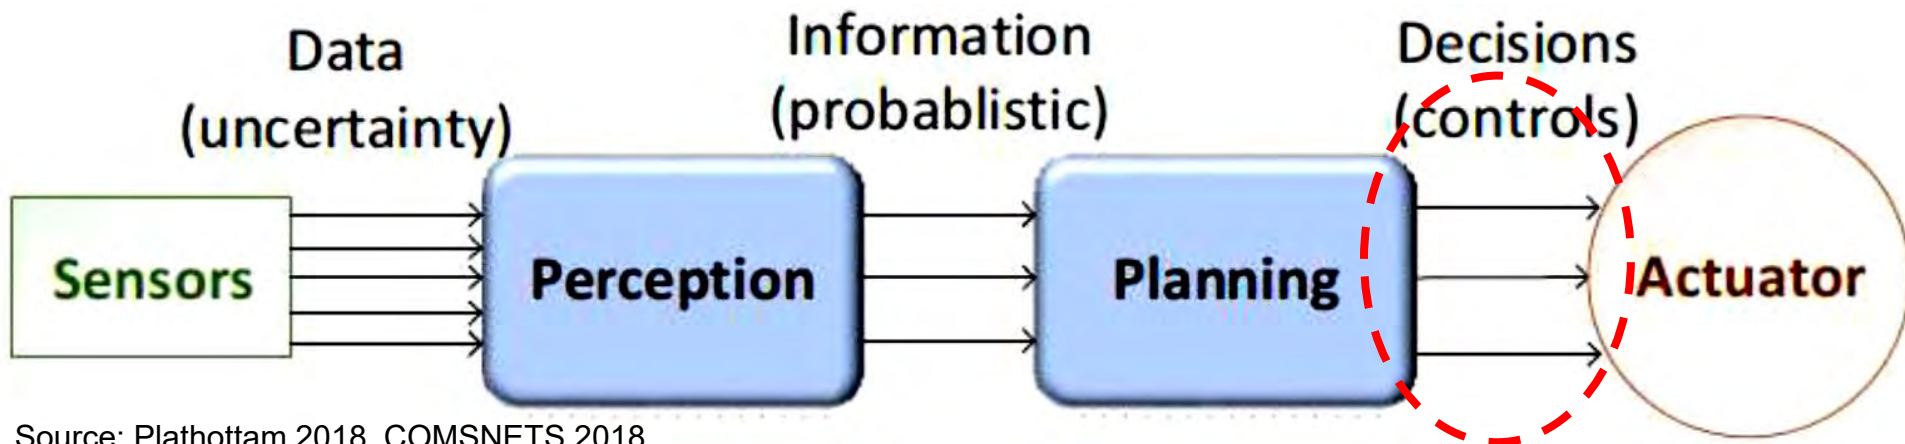

Source: M. Gupta, M. Abdelsalam, S. Khorsandroo and S. Mittal, "Security and Privacy in Smart Farming: Challenges and Opportunities," *IEEE Access*, vol. 8, pp. 34564-34584.

# Smart Car – Modification of Input Signal of Control Can be Dangerous

- Typically vehicles are controlled by human drivers
- Designing an Autonomous Vehicle (AV) requires decision chains.
- AV actuators controlled by algorithms.
- Decision chain involves sensor data, perception, planning and actuation.
- Perception transforms sensory data to useful information.
- Planning involves decision making.

Source: Plathottam 2018, COMSNETS 2018

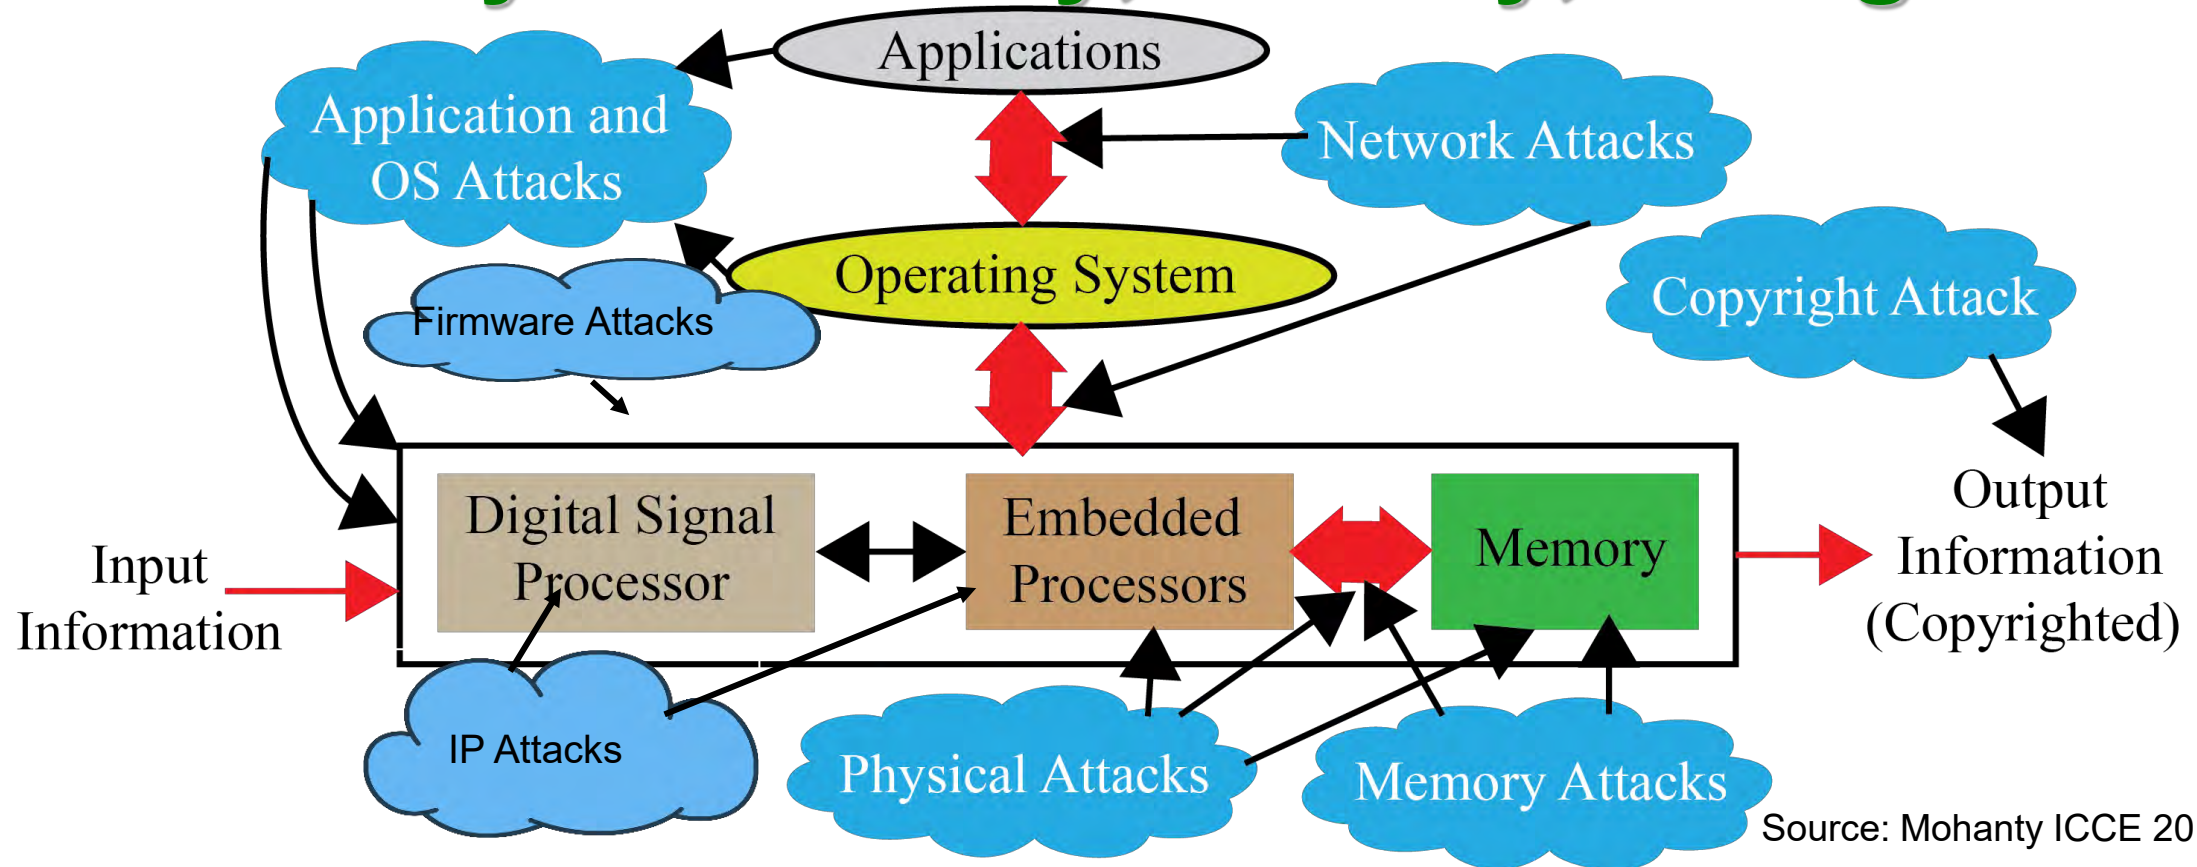

# Smart Grid Attacks can be Catastrophic

Threats	Vulnerabilities	Source of Threats	Attacks	Impacts
Security group knowledge	<ul style="list-style-type: none"> <li>Management deficiencies of network access rules</li> <li>Inaccurate critical assets documentation</li> </ul>	<ul style="list-style-type: none"> <li>Phishers</li> <li>Nation</li> <li>Hacker</li> <li>Insider</li> <li>Terrorist</li> <li>Spammers</li> <li>Spyware / Malware authors</li> </ul>	<ul style="list-style-type: none"> <li>Stuxnet</li> <li>Night Dragon</li> <li>Virus</li> <li>Denial of service</li> <li>Trojan horse</li> <li>Worm</li> <li>Zero day exploit</li> <li>Logical bomb</li> <li>Phishing</li> <li>Distributed DoS</li> <li>False data Injection</li> </ul>	<ul style="list-style-type: none"> <li>Ukraine power attack, 2015</li> <li>Stuxnet attack in Iran, 2010</li> <li>Browns Ferry plant, Alabama 2006</li> <li>Emergency shut down of Hatch Nuclear Power Plant, 2008</li> <li>Slammer attack at Davis-Besse power plant, 2001</li> <li>Attacks at South Korea NPP, 2015</li> </ul>

# Nonvolatile Memory Security and Protection

Source: <http://datalocker.com>

Nonvolatile / Harddrive Storage

Hardware-based encryption of data secured/protected by strong password/PIN authentication.

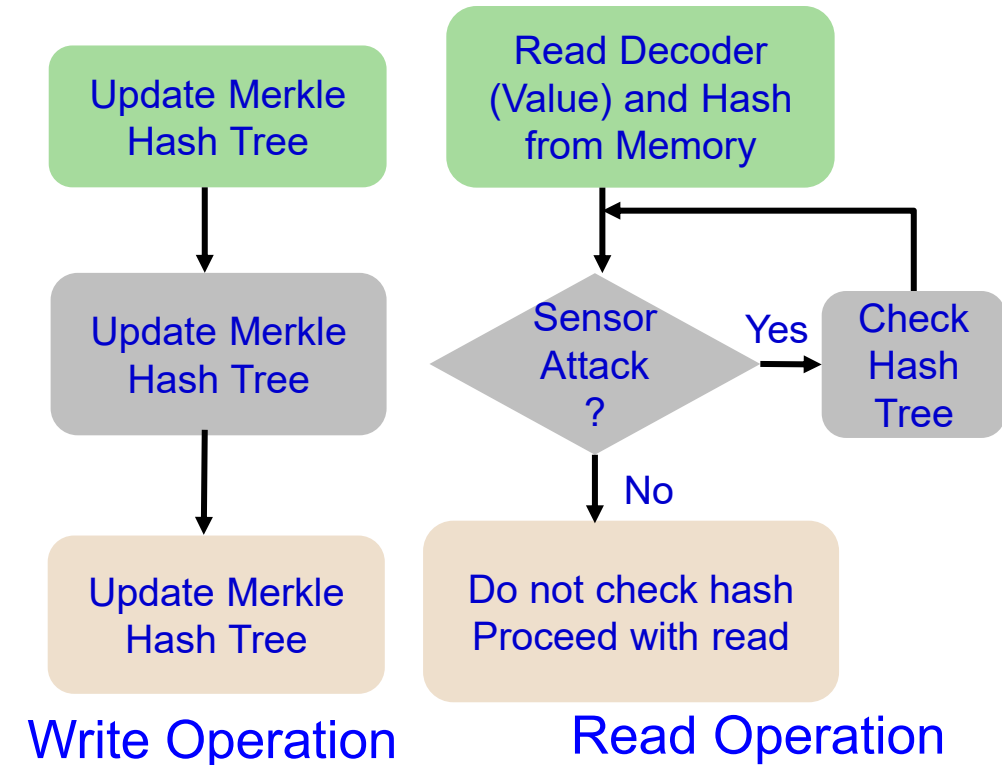

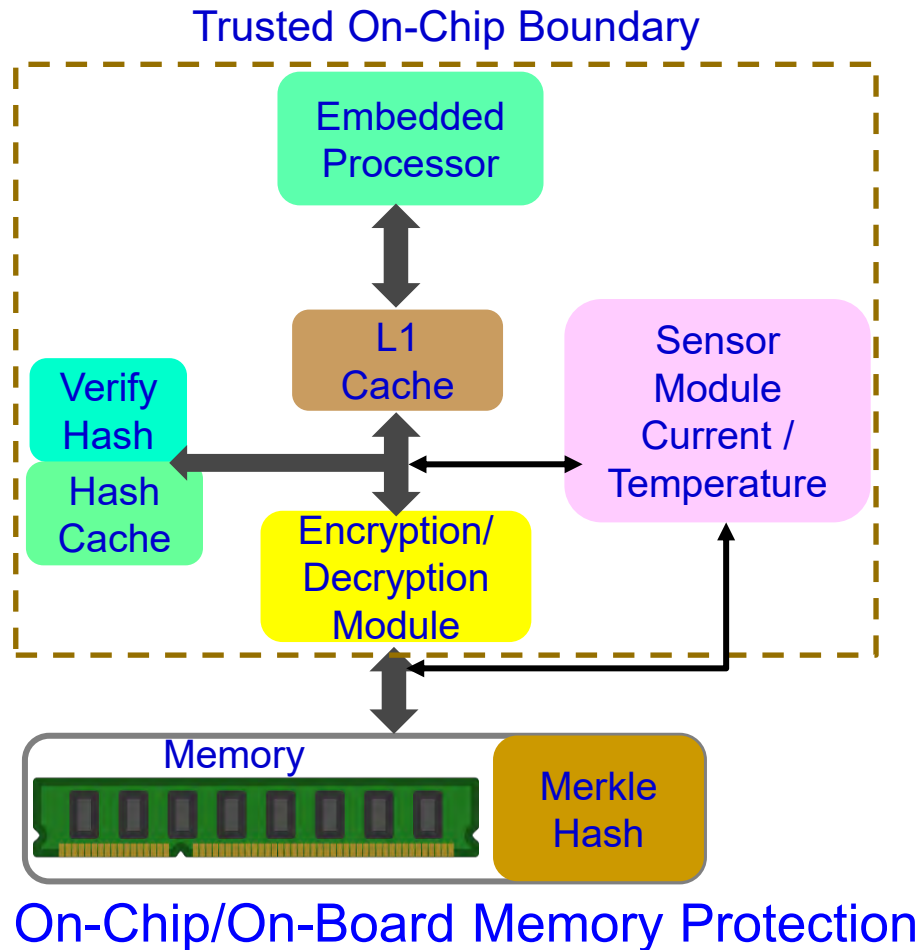

Software-based encryption to secure systems and partitions of hard drive.

Some performance penalty due to increase in latency!

How Cloud storage changes this scenario?

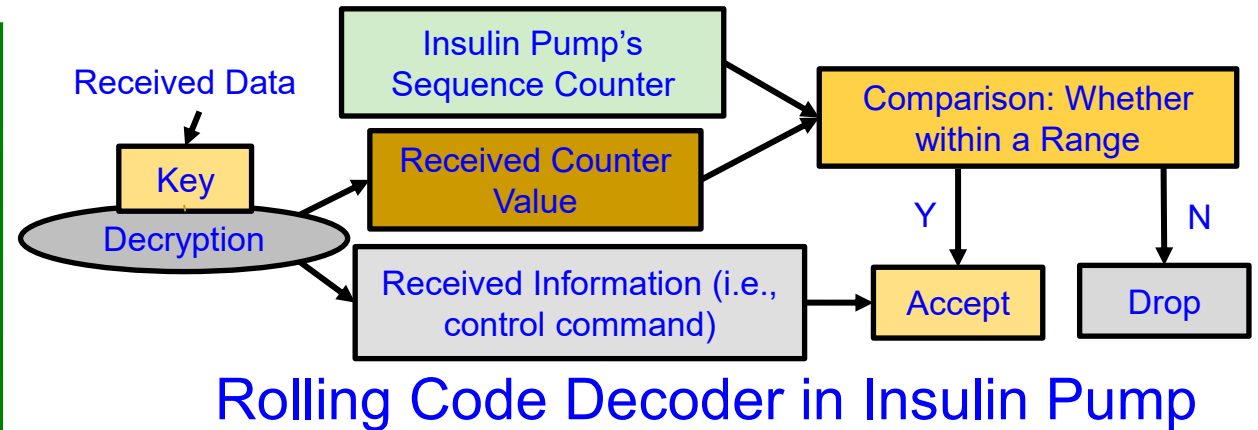

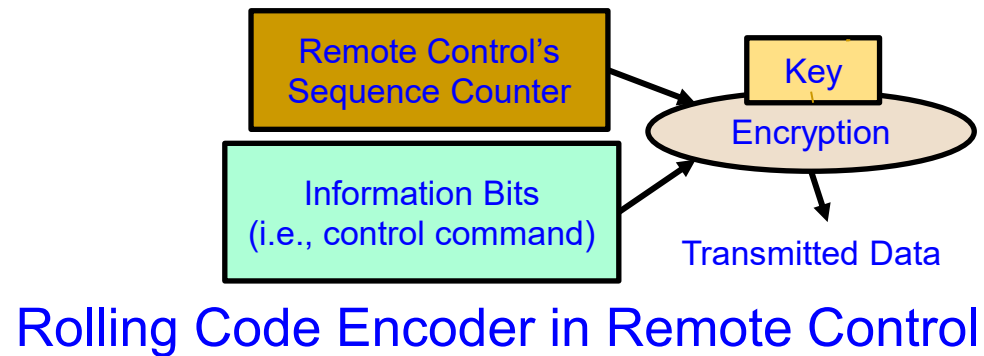

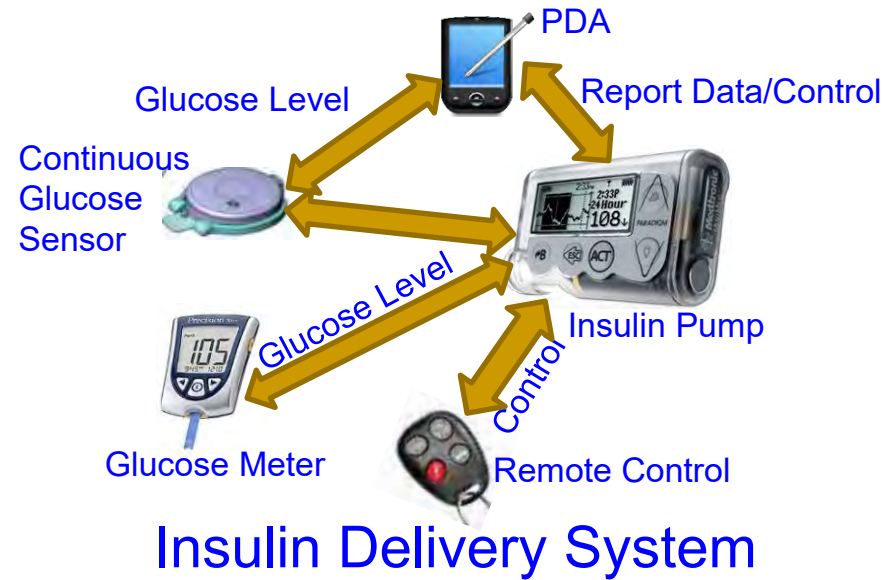

# Embedded Memory Security

Memory integrity verification with 85% energy savings with minimal performance overhead.

Source: S. Nimgaonkar, M. Gomathisankaran, and S. P. Mohanty, "MEM-DnP: A Novel Energy Efficient Approach for Memory Integrity Detection and Protection in Embedded Systems", *Springer Circuits, Systems, and Signal Processing Journal (CSSP)*, Volume 32, Issue 6, December 2013, pp. 2581--2604.

# Smart Healthcare Cybersecurity

Source: Li and Jha 2011: HEALTH 2011

# Drawbacks of Existing Cybersecurity Solutions

# IoT/CPS Cybersecurity Solutions – Advantages and Disadvantages

Analysis of selected approaches to security and privacy issues in CE.

Category	Current Approaches	Advantages	Disadvantages
Confidentiality	Symmetric key cryptography	Low computation overhead	Key distribution problem
	Asymmetric key cryptography	Good for key distribution	High computation overhead
Integrity	Message authentication codes	Verification of message contents	Additional computation overhead
Availability	Signature-based authentication	Avoids unnecessary signature computations	Requires additional infrastructure and rekeying scheme
Authentication	Physically unclonable functions (PUFs)	High speed	Additional implementation challenges
	Message authentication codes	Verification of sender	Computation overhead
Nonrepudiation	Digital signatures	Link message to sender	Difficult in pseudonymous systems
Identity privacy	Pseudonym	Disguise true identity	Vulnerable to pattern analysis
	Attribute-based credentials	Restrict access to information based on shared secrets	Require shared secrets with all desired services
Information privacy	Differential privacy	Limit privacy exposure of any single data record	True user-level privacy still challenging
	Public-key cryptography	Integratable with hardware	Computationally intensive
Location privacy	Location cloaking	Personalized privacy	Requires additional infrastructure
Usage privacy	Differential privacy	Limit privacy exposure of any single data record	Recurrent/time-series data challenging to keep private

# IT Cybersecurity Solutions Can't be Directly Extended to IoT/CPS Cybersecurity

## IT Cybersecurity

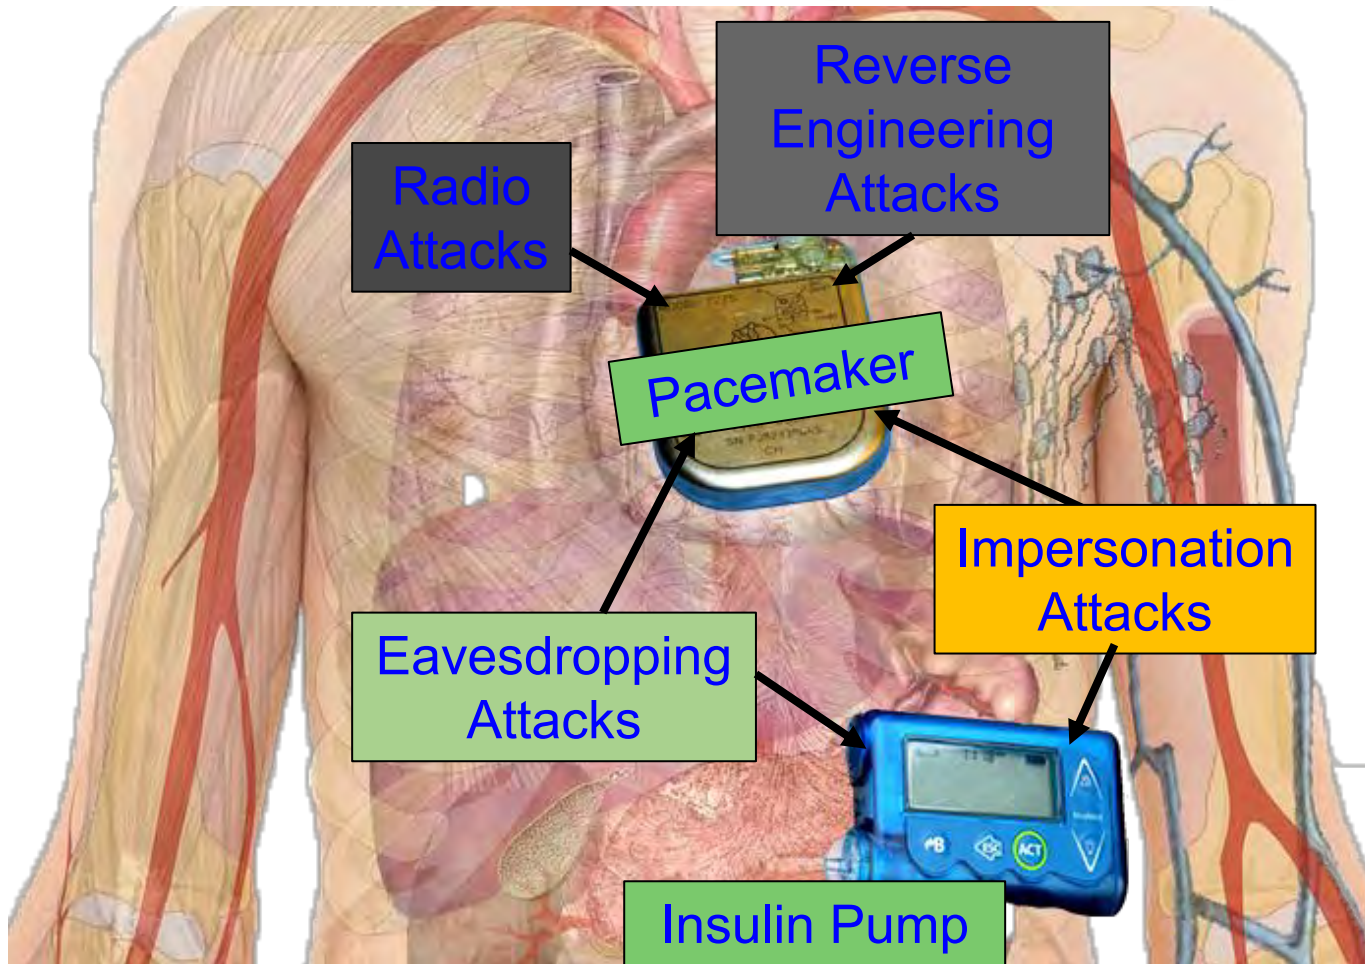

- IT infrastructure may be well protected rooms
- Limited variety of IT network devices
- Millions of IT devices
- Significant computational power to run heavy-duty security solutions
- IT security breach can be costly

## IoT Cybersecurity

- IoT may be deployed in open hostile environments
- Significantly large variety of IoT devices
- Billions of IoT devices
- May not have computational power to run security solutions
- IoT security breach (e.g. in a IoMT device like pacemaker, insulin pump) can be life threatening

Maintaining of Cybersecurity of Electronic Systems, IoT, CPS, needs **Energy**, and affects performance.

# Cybersecurity Measures in Healthcare Cyber-Physical Systems is Hard

Collectively (WMD+IMD):  
Implantable and Wearable  
Medical Devices (IWMDs)

Implantable and Wearable Medical  
Devices (IWMDs):

- Longer Battery life
- Safer device
- Smaller size
- Smaller weight
- Not much computational capability

# H-CPS Cybersecurity Measures is Hard - Energy Constrained

Pacemaker  
Battery Life  
- 10 years

Neurostimulator  
Battery Life  
- 8 years

- Implantable Medical Devices (IMDs) have integrated battery to provide energy to all their functions → Limited Battery Life depending on functions
- Higher battery/energy usage → Lower IMD lifetime
- Battery/IMD replacement → Needs surgical risky procedures

Source: C. Camara, P. Peris-Lopeza, and J. E.Tapiadora, "Security and privacy issues in implantable medical devices: A comprehensive survey", *Elsevier Journal of Biomedical Informatics*, Volume 55, June 2015, Pages 272-289.

# Smart Car Cybersecurity - Latency Constrained

## Protecting Communications

Particularly any Modems for In-vehicle Infotainment (IVI) or in On-board Diagnostics (OBD-II)

**Over The Air (OTA) Management**  
From the Cloud to Each Car

Cars can have 100 Electronic Control Units (ECUs) and 100 million lines of code, each from different vendors – Massive cybersecurity issues.

## Protecting Each Module

Sensors, Actuators, and Anything with an Microcontroller Unit (MCU)

**Mitigating Advanced Threats**  
Analytics in the Car and in the Cloud

Source: [http://www.symantec.com/content/en/us/enterprise/white\\_papers/public-building-security-into-cars-20150805.pdf](http://www.symantec.com/content/en/us/enterprise/white_papers/public-building-security-into-cars-20150805.pdf)

■ Connected cars require latency of ms to communicate and avoid impending crash:

- ❑ Faster connection
- ❑ Low latency
- ❑ Energy efficiency

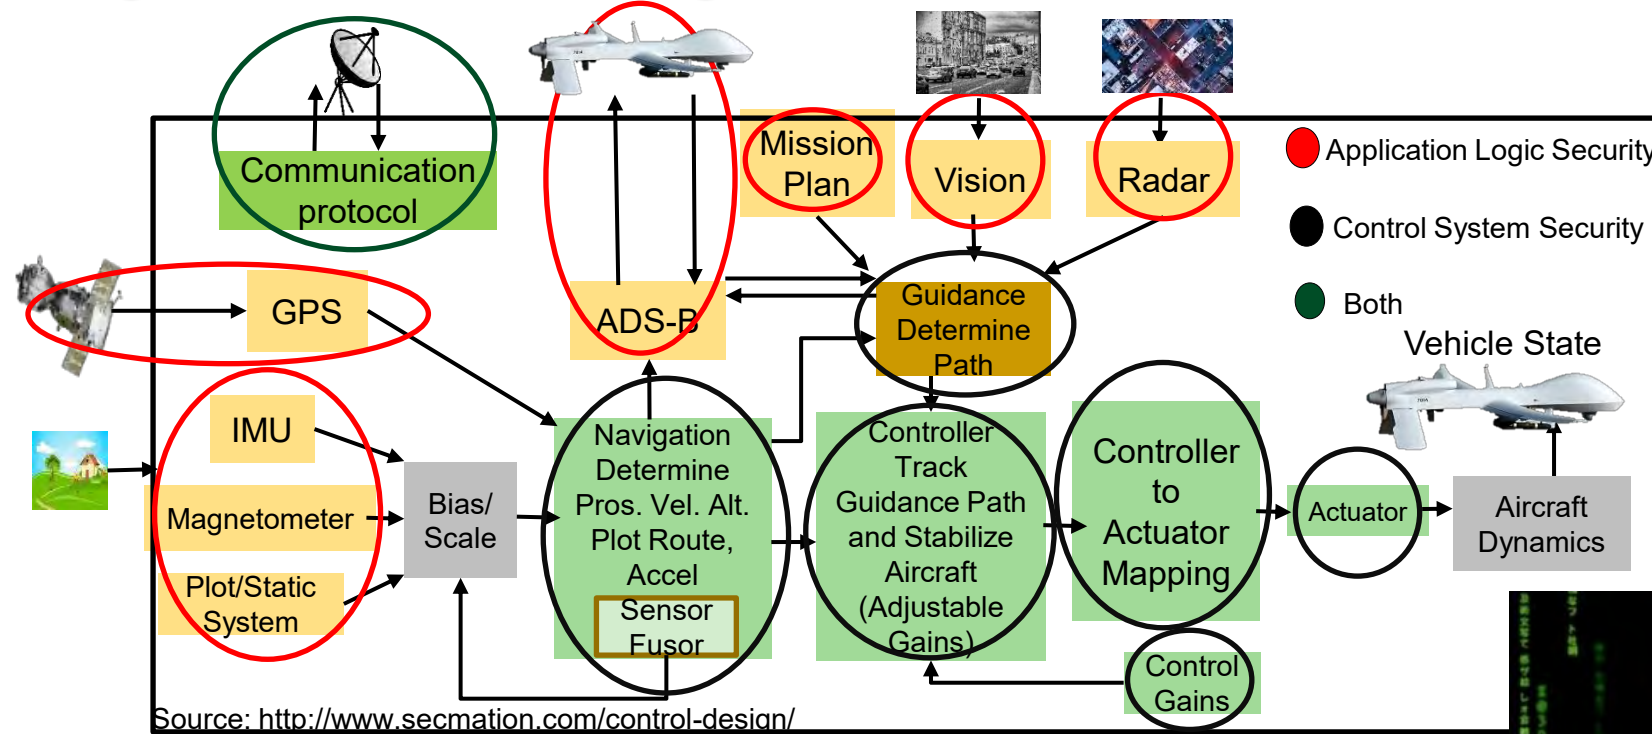

Security Mechanism Affects:

- Latency
- Mileage
- Battery Life

**Car Cybersecurity – Latency Constrained**

# UAV Cybersecurity - Energy & Latency Constrained

Cybersecurity Mechanisms Affect:

Battery Life

Latency

Weight

Aerodynamics

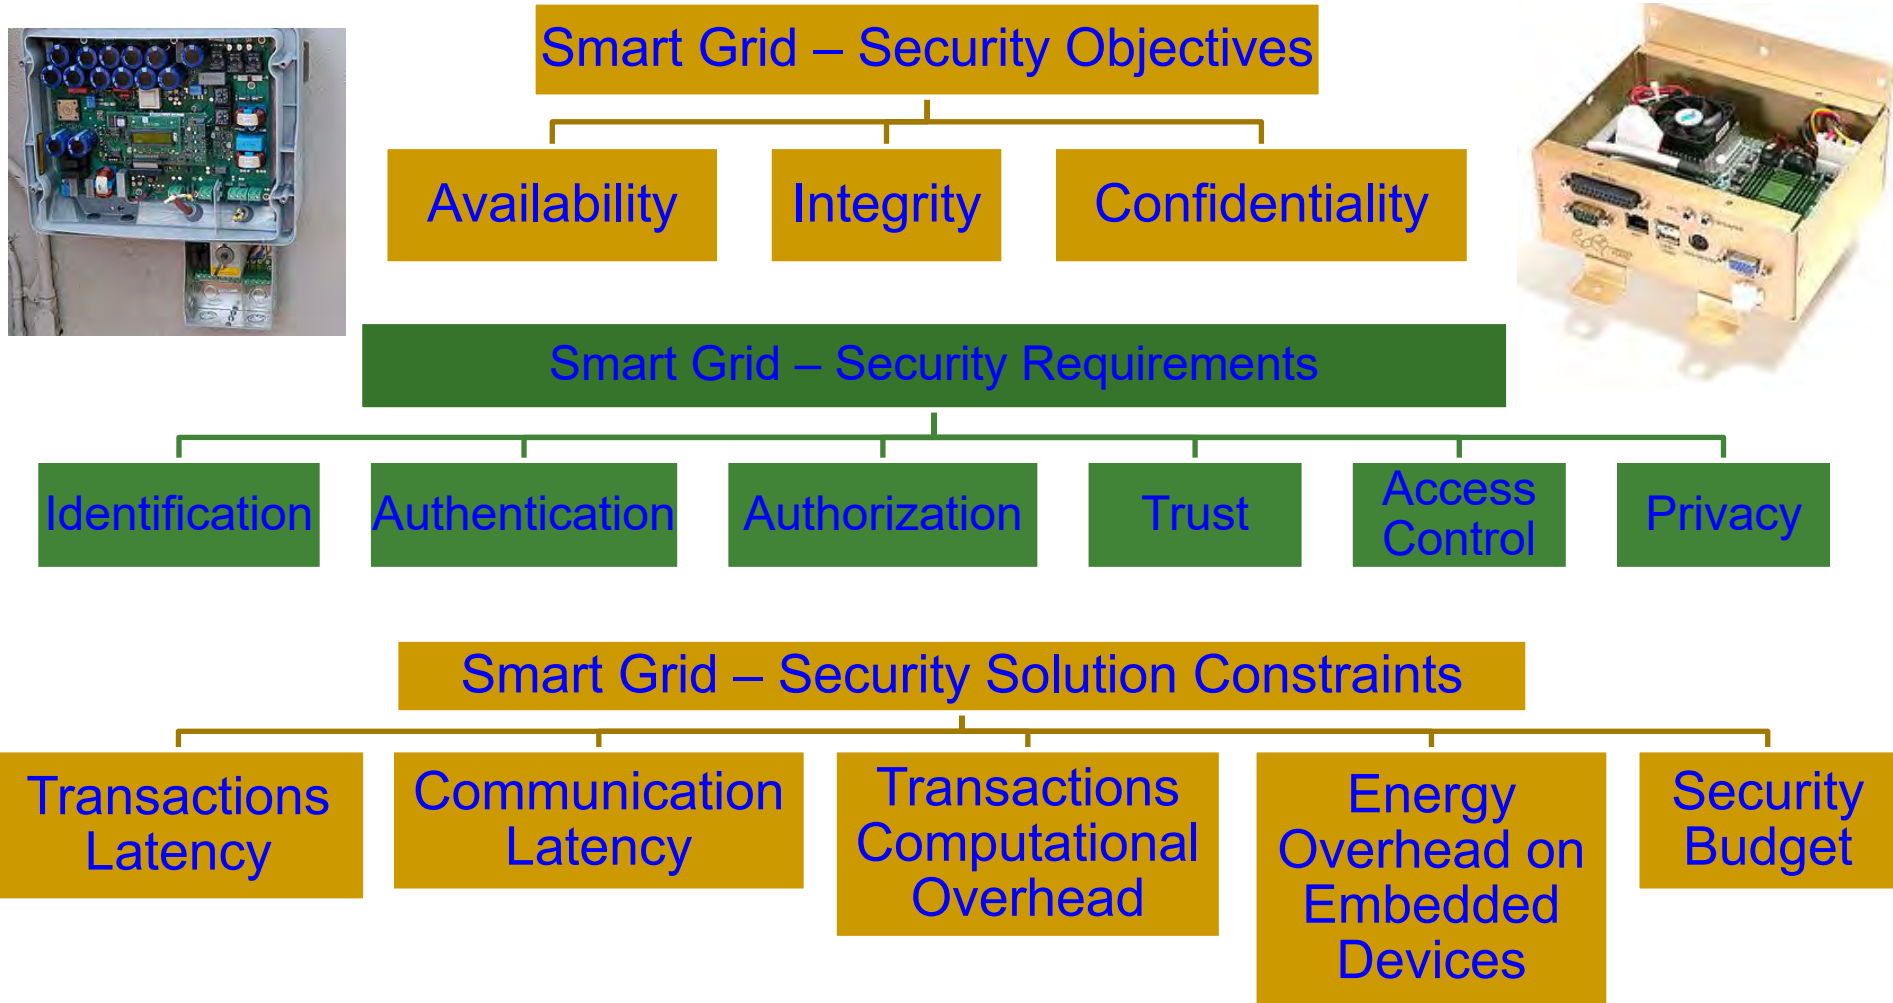

UAV Security – Energy and Latency Constraints

# Smart Grid Security Constraints

Source: R. K. Pandey and M. Misra, "Cyber security threats - Smart grid infrastructure," in *Proc. National Power Systems Conference (NPSC)*, 2016, pp. 1-6.

# Cybersecurity Attacks – Software Vs Hardware Based

## Software Based

- Software attacks via communication channels
- Typically from remote
- More frequent
- Selected Software based:
  - ❑ Denial-of-Service (DoS)
  - ❑ Routing Attacks
  - ❑ Malicious Injection
  - ❑ Injection of fraudulent packets
  - ❑ Snooping attack of memory
  - ❑ Spoofing attack of memory and IP address
  - ❑ Password-based attacks

## Hardware Based

- Hardware or physical attacks
- Maybe local
- More difficult to prevent
- Selected Hardware based:
  - ❑ Hardware backdoors (e.g. Trojan)
  - ❑ Inducing faults
  - ❑ Electronic system tampering/ jailbreaking
  - ❑ Eavesdropping for protected memory
  - ❑ Side channel attack
  - ❑ Hardware counterfeiting

Source: Mohanty ICCE Panel 2018

# Cybersecurity Solutions – Software Vs Hardware Based

## Software Based

- Introduces latency in operation
- Flexible - Easy to use, upgrade and update
- Wider-Use - Use for all devices in an organization
- Higher recurring operational cost
- Tasks of encryption easy compared to hardware – substitution tables
- Needs general purpose processor
- Can't stop hardware reverse engineering

Source: Mohanty ICCE Panel 2018

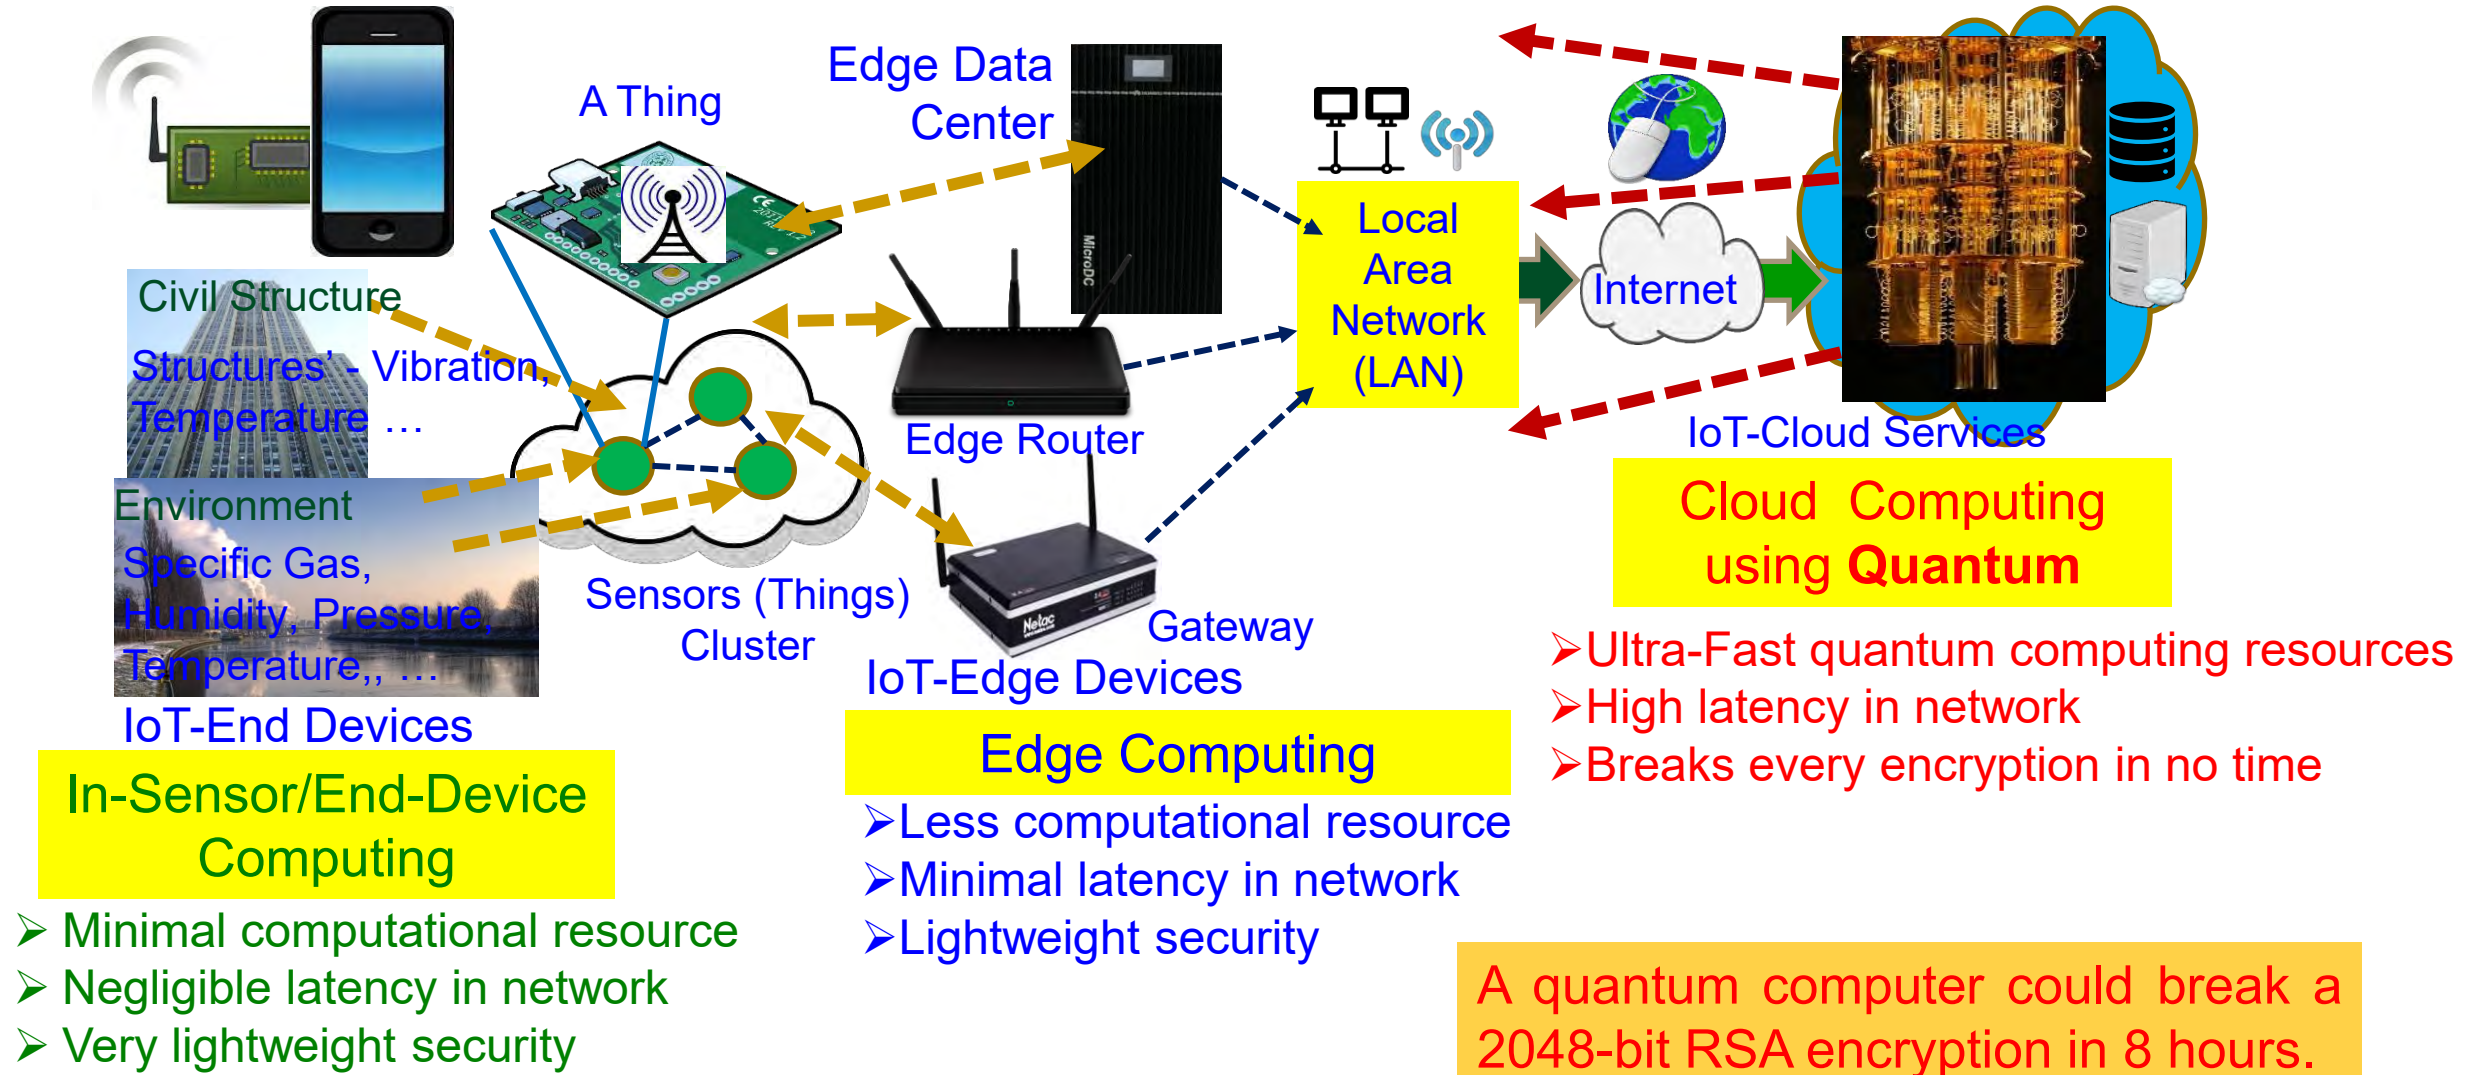

## Hardware Based

- High-Speed operation
- Energy-Efficient operation
- Low-cost using ASIC and FPGA
- Tasks of encryption easy compared to software – bit permutation
- Easy integration in CE systems
- Possible security at source-end like sensors, better suitable for IoT
- Susceptible to side-channel attacks
- Can't stop software reverse engineering

# Cybersecurity Nightmare ← Quantum Computing

# Security-by-Design (SbD) – The Principle

# IoT/CPS Design – Multiple Objectives

Source: Mohanty ICCE 2019 Keynote

Smart Cities  
Vs  
Smart Villages

# Privacy by Design (PbD) → General Data Protection Regulation (GDPR)

1995

## Privacy by Design (PbD)

- ❖ Treat privacy concerns as design requirements when developing technology, rather than trying to retrofit privacy controls after it is built

2018

## General Data Protection Regulation (GDPR)

- ❖ GDPR makes Privacy by Design (PbD) a legal requirement

## Security by Design aka Secure by Design (SbD)

# Security by Design (SbD) and/or Privacy by Design (PbD)

Embedding of security/privacy into the architecture (hardware+software) of various products, programs, or services.

Retrofitting: Difficult → Impossible!

Source: <https://teachprivacy.com/tag/privacy-by-design/>

# Security by Design (SbD)

## 7 Fundamental Principles

Proactive not Reactive

Security/Privacy as the Default

Security/Privacy Embedded into Design

Full Functionality - Positive-Sum, not Zero-Sum

End-to-End Security/Privacy - Lifecycle Protection

Visibility and Transparency

Respect for Users

Source: [https://iapp.org/media/pdf/resource\\_center/Privacy%20by%20Design%20-%207%20Foundational%20Principles.pdf](https://iapp.org/media/pdf/resource_center/Privacy%20by%20Design%20-%207%20Foundational%20Principles.pdf)

# Hardware-Assisted Security (HAS)

- Software based Security:
  - ❑ A general purposed processor is a deterministic machine that computes the next instruction based on the program counter.
  - ❑ Software based security approaches that rely on some form of encryption can't be full proof as breaking them is just matter of time.
  - ❑ It is projected that quantum computers that use different paradigms than the existing computers will make things worse.
- Hardware-Assisted Security (HAS): Security/Protection provided by the hardware: for information being processed by an electronic system, for hardware itself, and/or for the system.

# Hardware-Assisted Security (HAS)

- Hardware-Assisted Security: Security provided by hardware for:

(1) information being processed,

Privacy by Design (PbD)

(2) hardware itself,

Security/Secure by Design (SbD)

(3) overall system

- Additional hardware components used for cybersecurity.
- Hardware design modification is performed.
- System design modification is performed.

RF Hardware Security

Digital Hardware Security – Side Channel

Hardware Trojan Protection

Information Security, Privacy, Protection

Bluetooth Hardware Security

Memory Protection

Digital Core IP Protection

Source: Mohanty ICCE 2018 Panel

Source: E. Kougianos, S. P. Mohanty, and R. N. Mahapatra, "Hardware Assisted Watermarking for Multimedia", Special Issue on Circuits and Systems for Real-Time Security and Copyright Protection of Multimedia, Elsevier International Journal on Computers and Electrical Engineering, Vol 35, No. 2, Mar 2009, pp. 339-358..

# Hardware Assisted Security (HAS)

# Secure SoC Design: Alternatives

- Addition of security and AI features in SoC:
  - Algorithms
  - Protocols
  - Architectures
  - Accelerators / Engines – Cybersecurity and AI Instructions
- Consideration of security as a dimension in the design flow:
  - New design methodology
  - Design automation or computer aided design (CAD) tools for fast design space exploration.

# Secure SoC - Alternatives

Development of hardware amenable algorithms.

Building efficient VLSI architectures.

Hardware-software co-design for security, power, and performance tradeoffs.

SoC design for cybersecurity, power, and performance tradeoffs.

# Secure SoC: Different Design Alternatives

New CMOS sensor with security.

New data converters with security.

Independent security and AI processing cores.

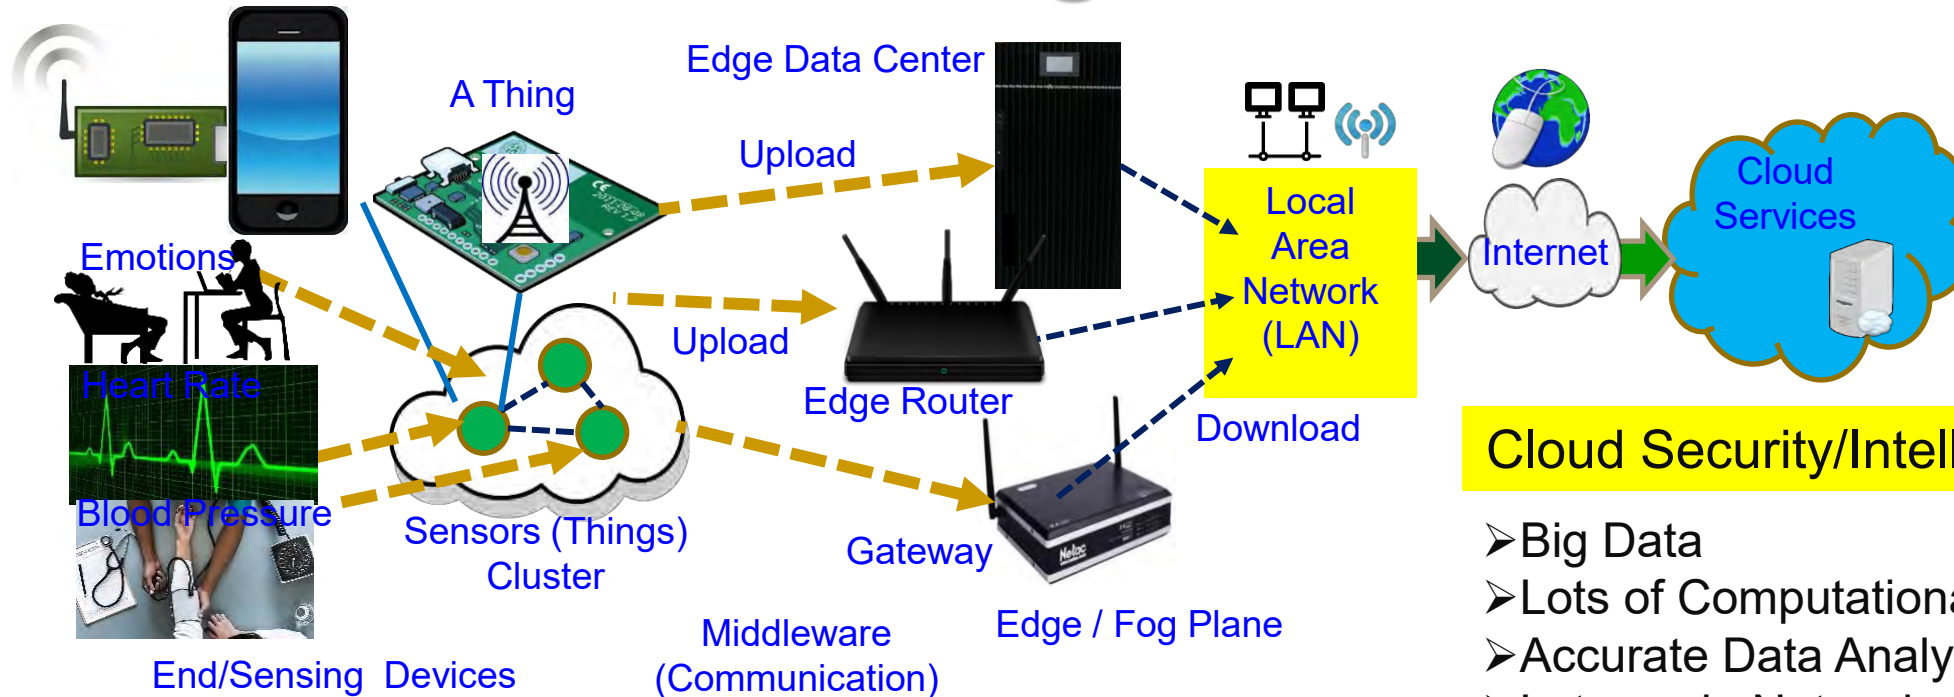

New instruction set architecture for RISC to support security at micro-architecture level.

# Trustworthy Electronic System

- A selective attributes of electronic system to be trustworthy:
  - ❑ It must maintain integrity of information it is processing.
  - ❑ It must conceal any information about the computation performed through any side channels such as power analysis or timing analysis.
  - ❑ It must perform only the functionality it is designed for, nothing more and nothing less.
  - ❑ It must not malfunction during operations in critical applications.
  - ❑ It must be transparent only to its owner in terms of design details and states.
  - ❑ It must be designed using components from trusted vendors.
  - ❑ It must be built/fabricated using trusted fabs.

# CPS – IoT-Edge Vs IoT-Cloud

## End Security/Intelligence

- Minimal Data
- Minimal Computational Resource
- Least Accurate Data Analytics
- Very Rapid Response

## Edge Security/Intelligence

- Less Data
- Less Computational Resource
- Less Accurate Data Analytics
- Rapid Response

## Cloud Security/Intelligence

- Big Data
- Lots of Computational Resource
- Accurate Data Analytics
- Latency in Network
- Energy Overhead in Communications

Heavy-Duty ML is more suitable for smart cities

TinyML at End and/or Edge is key for smart villages.

# Hardware Cybersecurity Primitives

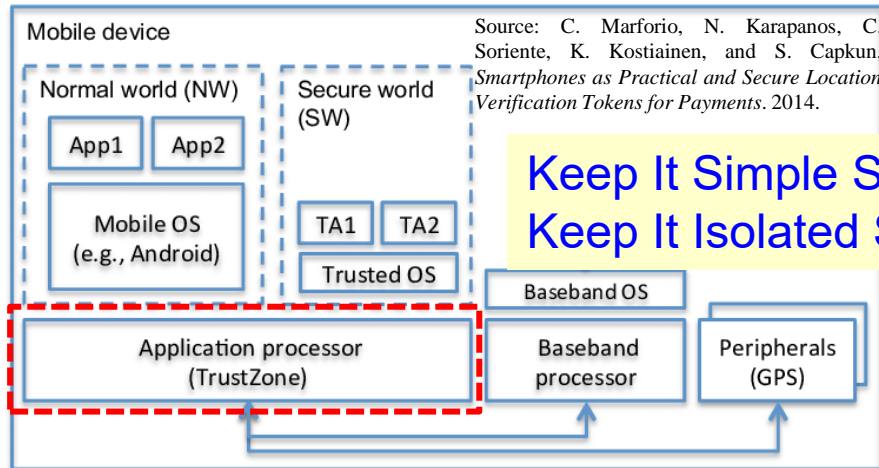

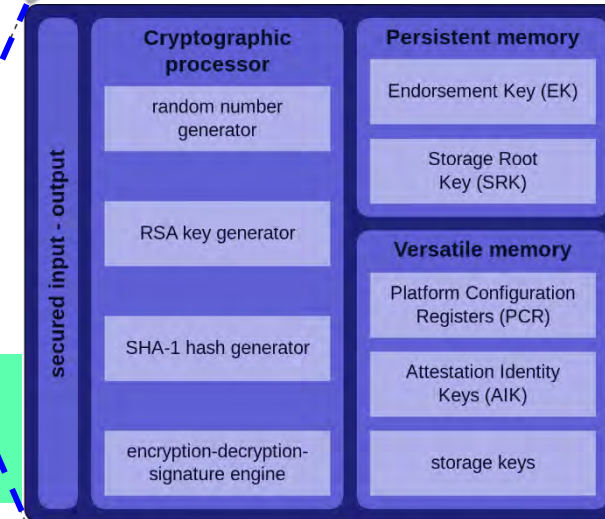

## – TPM, HSM, TrustZone, and PUF

Hardware Security Module (HSM)

Trusted Platform Module (TPM)

Keep It Simple Stupid (KISS) →  
Keep It Isolated Stupid (KIIS)

Physical Unclonable Functions (PUF)

Source: Electric Power Research Institute (EPRI)

# PUF versus TPM

Trusted Platform Module (TPM)

## TPM:

- 1) The set of specifications for a secure crypto-processor and
- 2) The implementation of these specifications on a chip

Physical Unclonable Functions (PUF)

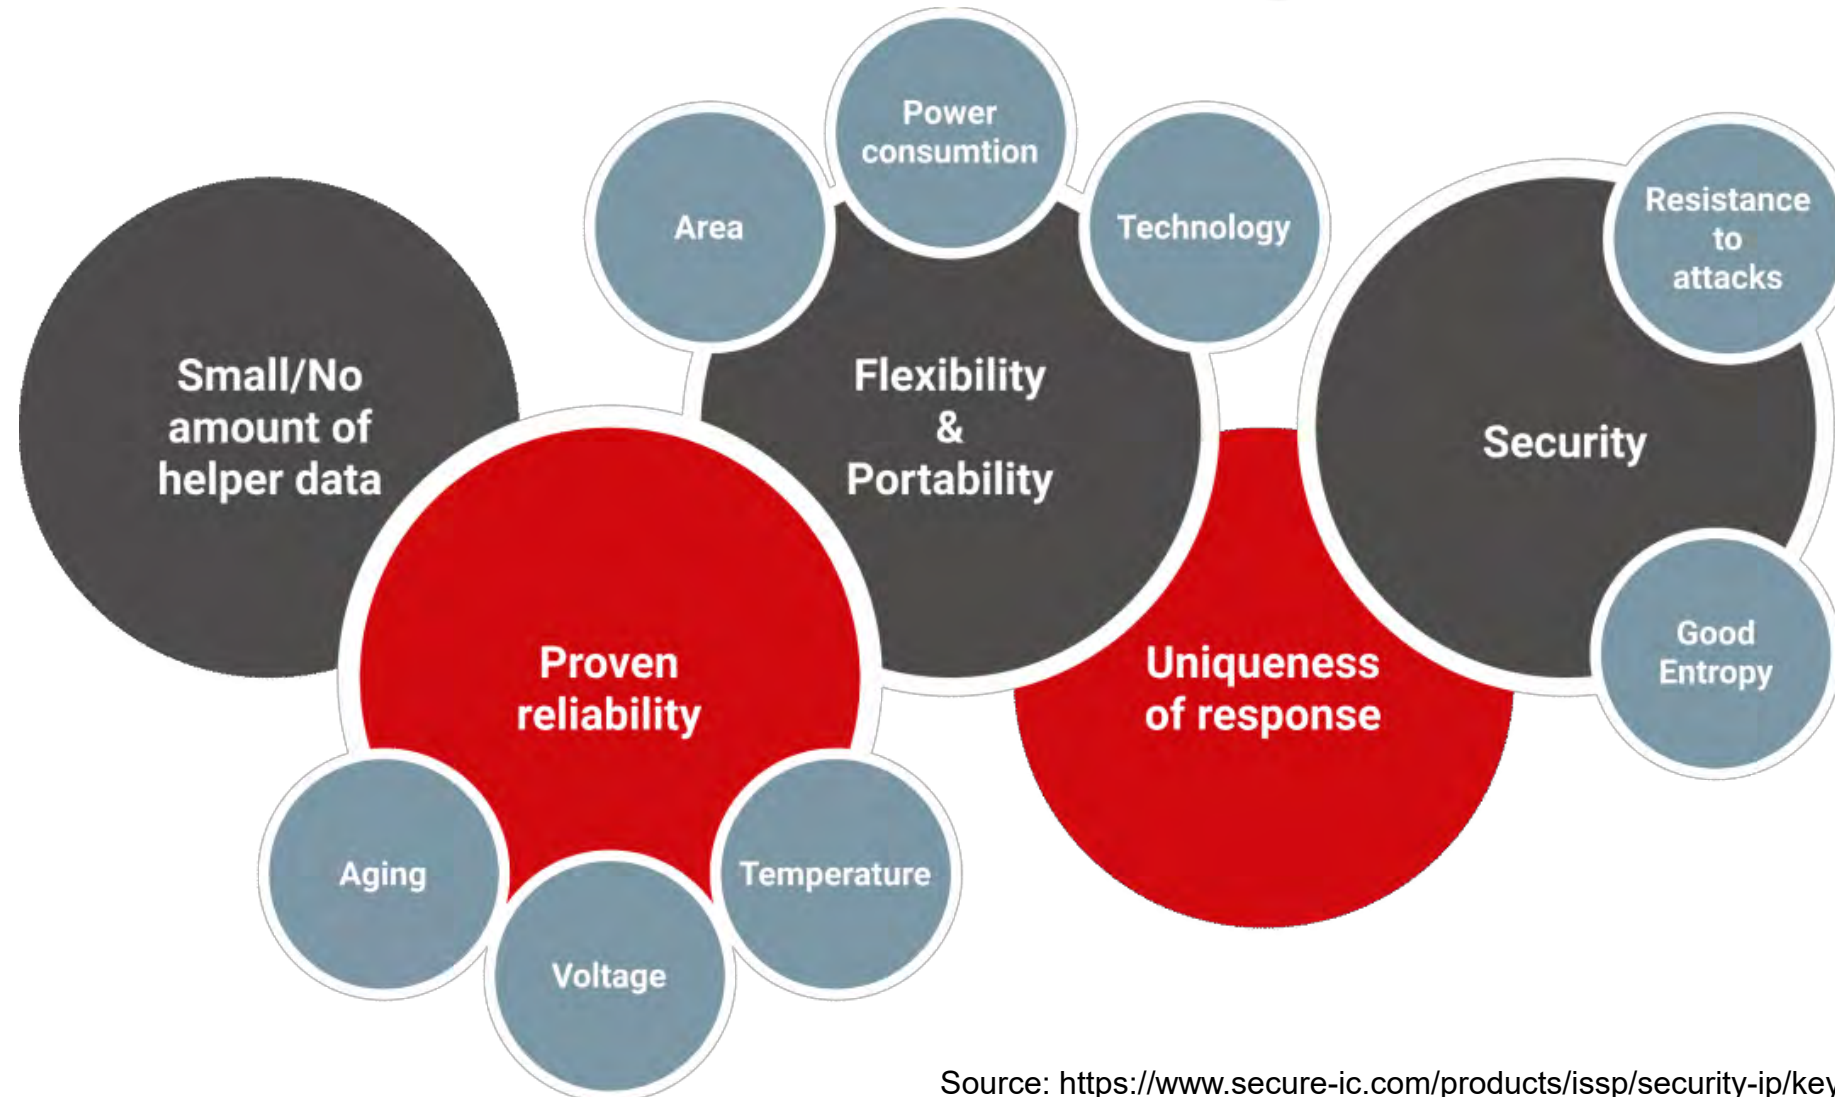

Source: Electric Power Research Institute (EPRI)

## PUF:

- 1) Based on a physical system
- 2) Generates random output values

# PUF: Advantages

Source: <https://www.secure-ic.com/products/issp/security-ip/key-management/puf-ip/>

# Secure Digital Camera (SDC) – My Invention

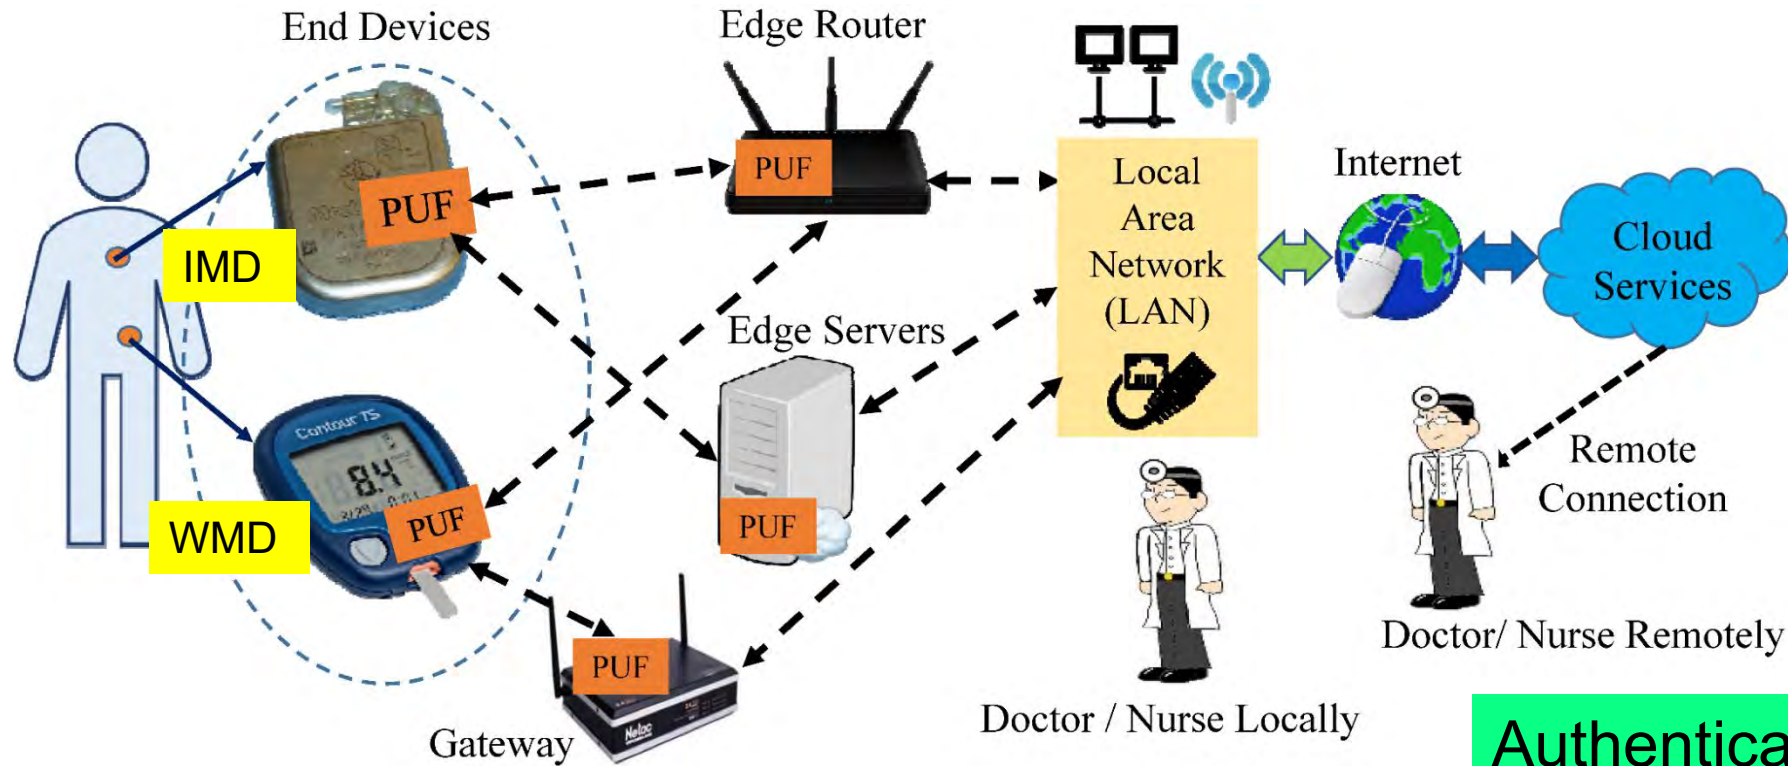

Include additional/alternative hardware/software components and uses DVFS like technology for energy and performance optimization.

# PUFchain – The Big Idea

Blockchain Technology is integrated with Physically Unclonable Functions as PUFchain by storing the PUF Key into immutable Blockchain

## Roles of PUF:

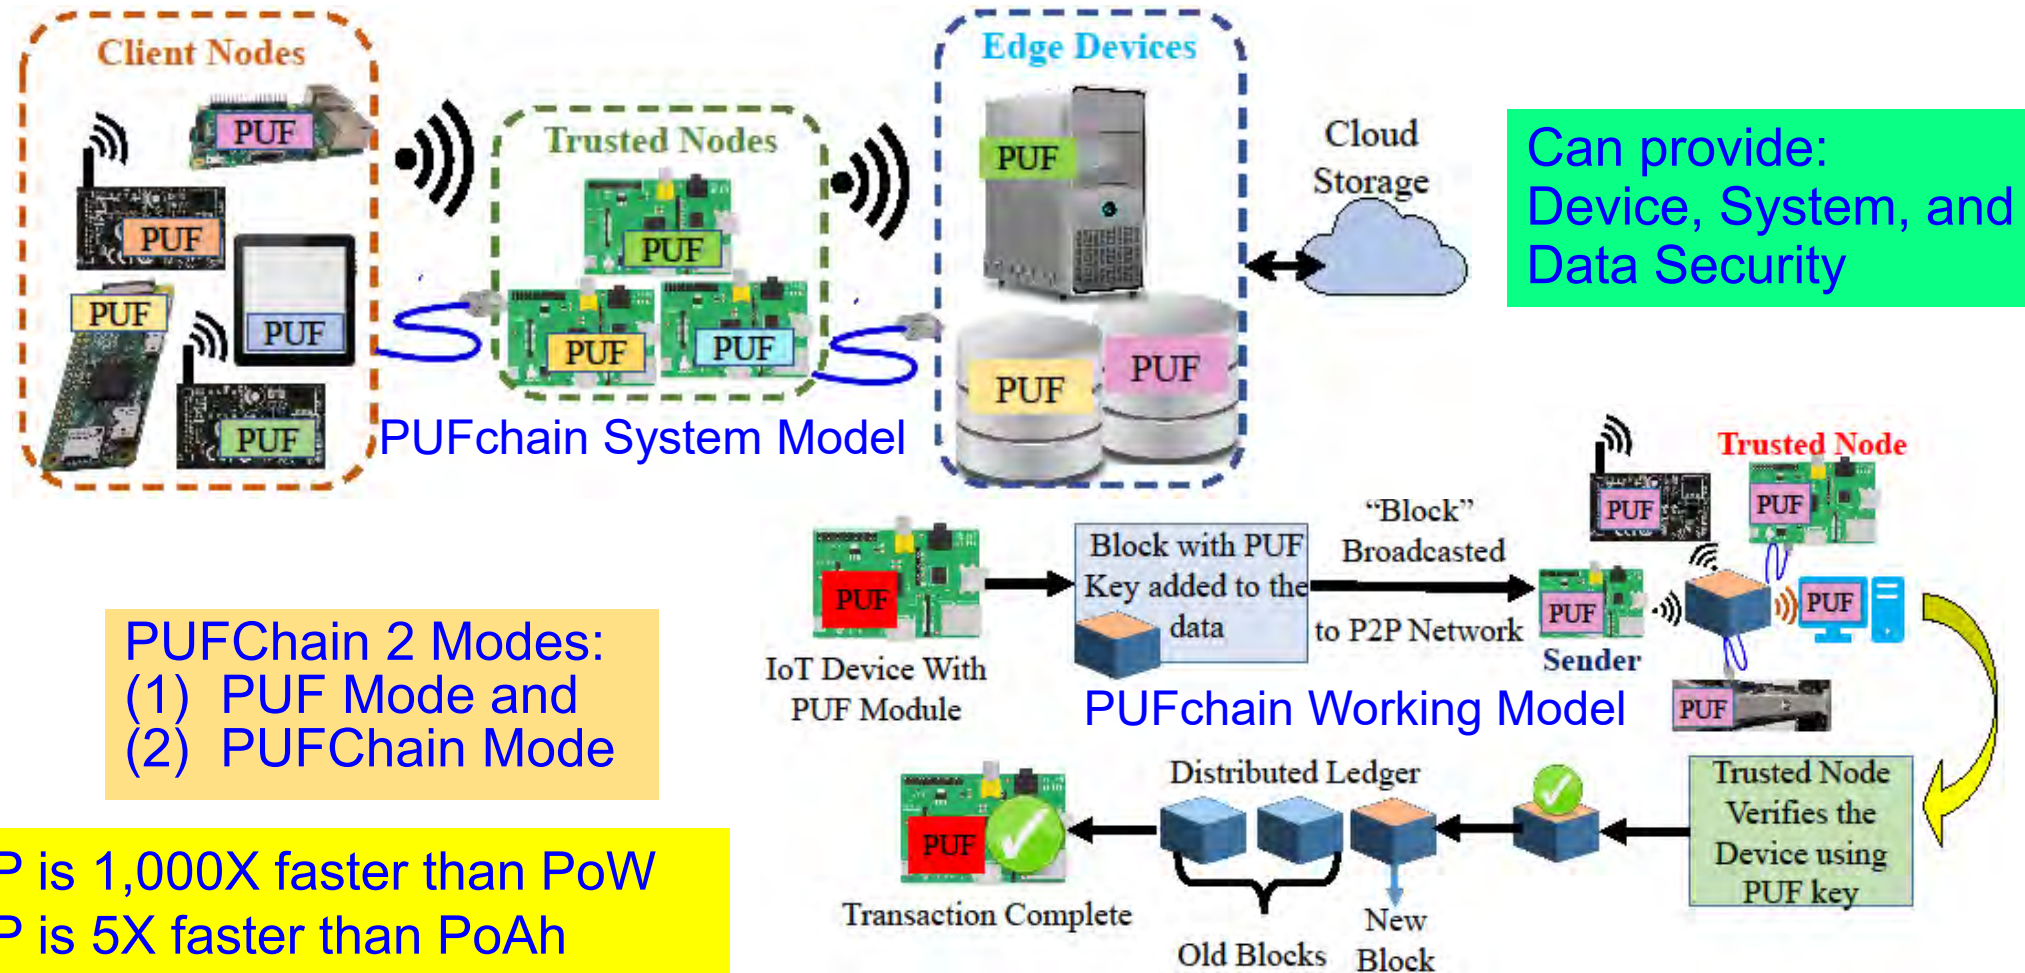

- Hardware Accelerator for Blockchain
- Independent Authentication
- Double-Layer Protection
- 3 modes: PUF, Blockchain, PUF+Blockchain

# Our PUFchain – 3 Variants

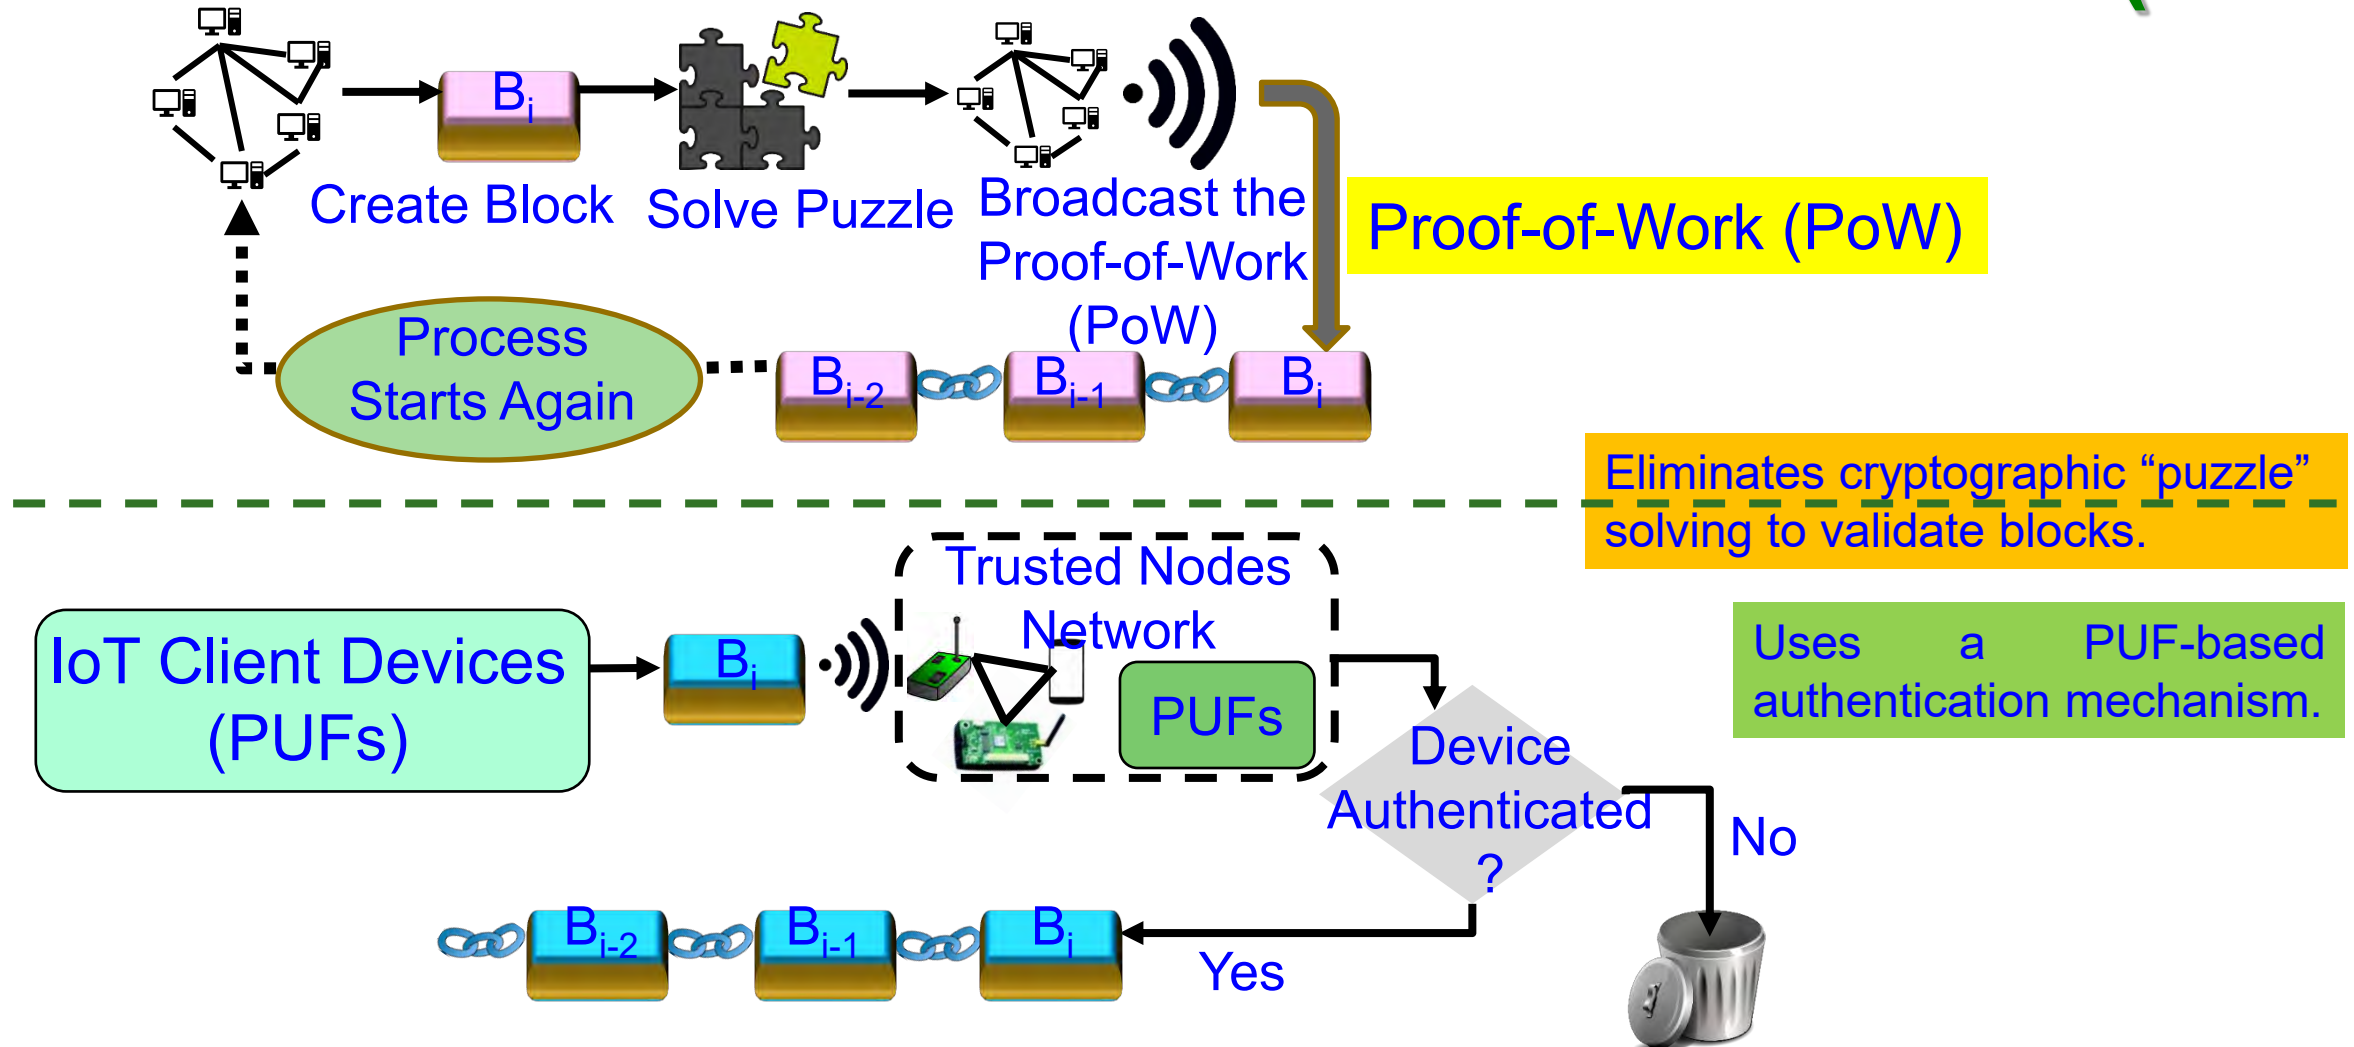

Research Works	Distributed Ledger Technology	Focus Area	Security Approach	Security Primitive	Security Principle
PUFchain	Blockchain	IoT / CPS (Device and Data)	Proof of Physical Unclonable Function (PUF) Enabled Authentication	PUF + Blockchain	Hardware Assisted Security (HAS) or Security-by-Design (SbD)
PUFchain 2.0	Blockchain	IoT/CPS (Device and Data)	Media Access Control (MAC) & PUF Based Authentication	PUF + Blockchain	Hardware Assisted Security (HAS) or Security-by-Design (SbD)
PUFchain 3.0	Tangle	IoT/CPS (Device and Data)	Masked Authentication Messaging (MAM)	PUF + Tangle	Hardware Assisted Security (HAS) or Security-by-Design (SbD)

# Physical Unclonable Function (PUF) - Challenges and Research

# If PUF is So Great, Why Isn't Everyone Using It?

- PUF technology is difficult to implement well.
- In addition to security system expertise, one needs analog circuit expertise to harness the minute variances in silicon and do it reliably.
- Some PUF implementations plan for a certain amount of marginality in the analog designs, so they create a PUF field of 256 bits (for example), knowing that only 50 percent of those PUF features might produce reliable bits, then mark which features are used on each production part.
- PUF technology relies on such minor variances, long-term quality can be a concern: will a PUF bit flip given the stresses of time, temperature, and other environmental factors?
- Overall the unique mix of security, analog expertise, and quality control is a formidable challenge to implementing a good PUF technology.

- Faster prototyping
- Lesser design effort
- Minimal skills
- Cheap
- Rely on already existing post fabrication variability

Source: **S. P. Mohanty** and E. Kougianos, “Incorporating Manufacturing Process Variation Awareness in Fast Design Optimization of Nanoscale CMOS VCOs”, *IEEE Transactions on Semiconductor Manufacturing (TSM)*, Volume 27, Issue 1, February 2014, pp. 22--31.

- Takes time to get it from fab
- More design effort
- Needs analog design skills
- Can be expensive
- Choice to send to fab as per the need

# PUF - Side Channel Leakage

- Delay-based PUF implementations are vulnerable to side-channel attacks.

Langer ICR HH 150 probe over Xilinx Spartan3E-1200 FPGA

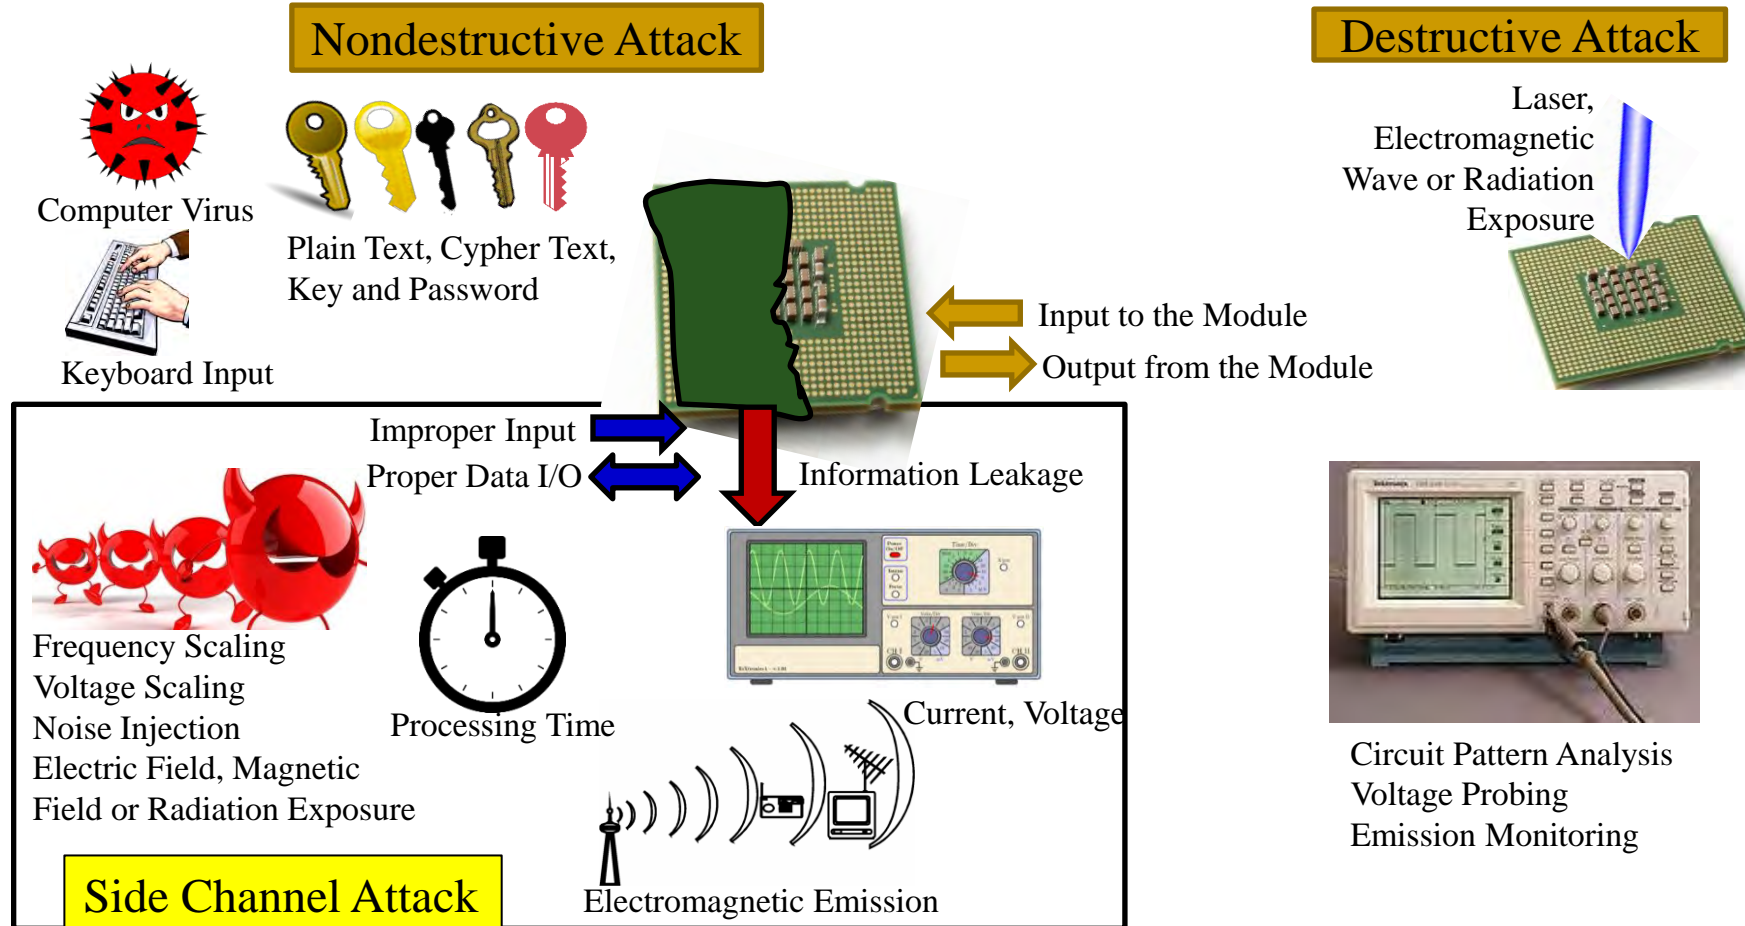

Source: Merli, D., Schuster, D., Stumpf, F., Sigl, G. (2011). Side-Channel Analysis of PUFs and Fuzzy Extractors. In: McCune, J.M., Balacheff, B., Perrig, A., Sadeghi, AR., Sasse, A., Beres, Y. (eds) Trust and Trustworthy Computing. Trust 2011. Lecture Notes in Computer Science, vol 6740. Springer, Berlin, Heidelberg. [https://doi.org/10.1007/978-3-642-21599-5\\_3](https://doi.org/10.1007/978-3-642-21599-5_3)

Magnification of the last part of the complete trace. Three trigger signals can be identified: (1) between oscillator phase and error correction phase, (2) between error correction and hashing, and (3) at the end of hashing.

# PUF – Trojan Issue

- Improper implementation of PUF could introduce "backdoors" to an otherwise secure system.
- PUF introduces more entry points for hacking into a cryptographic system.

Provide backdoor to adversary.  
Chip fails during critical needs.

# PUF – Machine Learning Attack

- One types of non-invasive attacks is machine learning (ML) attacks.
- ML attacks are possible for PUFs as the pre- and post-processing methods ignore the effect of correlations between PUF outputs.
- Many ML algorithms are available against known families of PUFs.

# Conclusion

# Conclusion

- Cybersecurity and Privacy are important problems in IoT-driven Cyber-Physical Systems (CPS).
- Various elements and components of IoT/CPS including Data, Devices, System Components, AI need security.
- Both software and hardware-based attacks and solutions are possible for cybersecurity in IoT/CPS.
- Cybersecurity in IoT-based H-CPS, A-CPS, E-CPS, and T-CPS, etc. can have serious consequences.
- Existing cybersecurity solutions have serious overheads and may not even run in the end-devices (e.g. a medical device) of CPS/IoT.
- Security-by-Design (SbD) advocate features at early design phases, no-retrofitting.
- Hardware-Assisted Security (HAS): Security provided by hardware for: (1) information being processed, (2) hardware itself, (3) overall system.
- Research on topologies and protocols for PUF based cybersecurity is ongoing.

# Future Directions

- Privacy and/or Security by Design (PbD or SbD) needs research.
- Cybersecurity, Privacy, IP Protection of Information and System (in Cyber-Physical Systems or CPS) need more research.
- Cybersecurity of IoT-based systems (e.g. Smart Healthcare device/data, Smart Agriculture, Smart Grid, UAV, Smart Cars) needs research.
- Sustainable Smart City and Smart Villages: need sustainable IoT/CPS.
- More research is needed for low-overhead PUF design and protocols that can be integrated in any IoT-enabled systems.
