Security-by-Design to Fortify Cyber-Physical Systems

Expert Lecture – AICTE Training and Learning Academy Faculty Development Program (ATAL-FDP)

Silicon University, Bhubaneswar, India – 10 Dec 2024

Homepage:
www.smohanty.org

Prof./Dr. Saraju Mohanty
University of North Texas, USA.

Outline

- IoT/CPS – Big Picture
- Challenges in IoT/CPS Design
- Cybersecurity Solution for IoT/CPS
- Drawbacks of Existing Cybersecurity Solutions
- Security-by-Design (SbD) – The Principle
- Security-by-Design (SbD) - Specific Examples
- Is Physical Unclonable Function (PUF) a Solution for All Cybersecurity Problems?
- Is Blockchain a Solution for All Cybersecurity Problems?
- Conclusion

The Big Picture

Issues Challenging City Sustainability

Pollution

Water Crisis

Energy Crisis

Traffic

The Problem

- Uncontrolled growth of urban population
- Limited natural and man-made resources

Source: https://humanitycollege.org

Smart City Technology - As a Solution

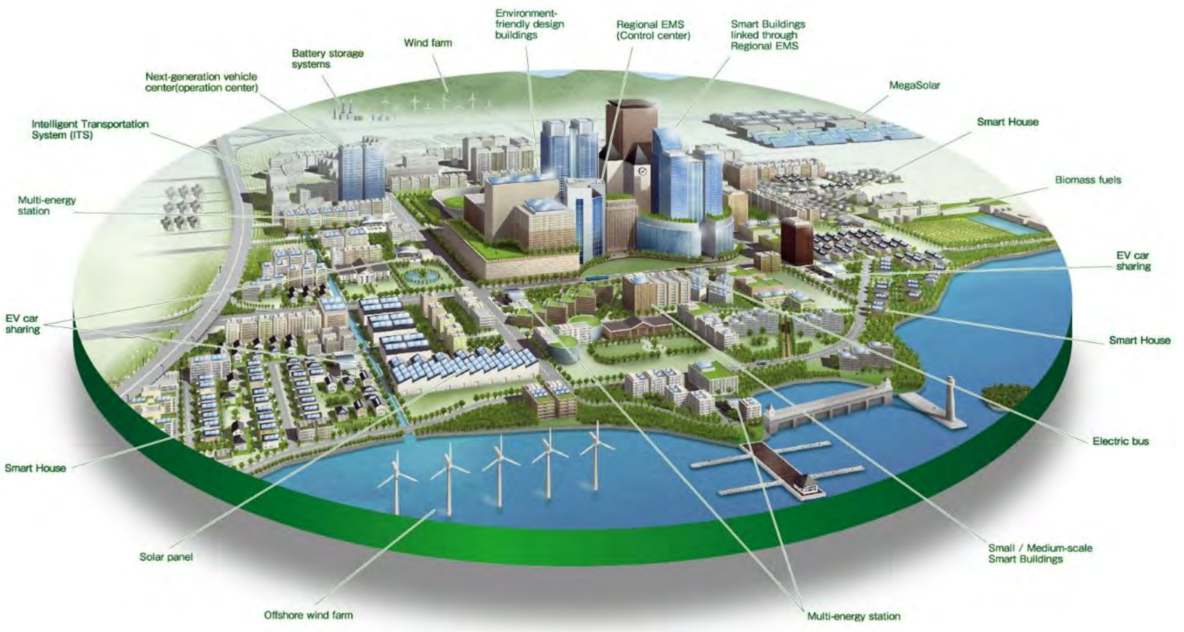
- Smart Cities: For effective management of limited resource to serve largest possible population to improve:
  - Livability
  - Workability
  - Sustainability

At Different Levels:
- Smart Village
- Smart State
- Smart Country

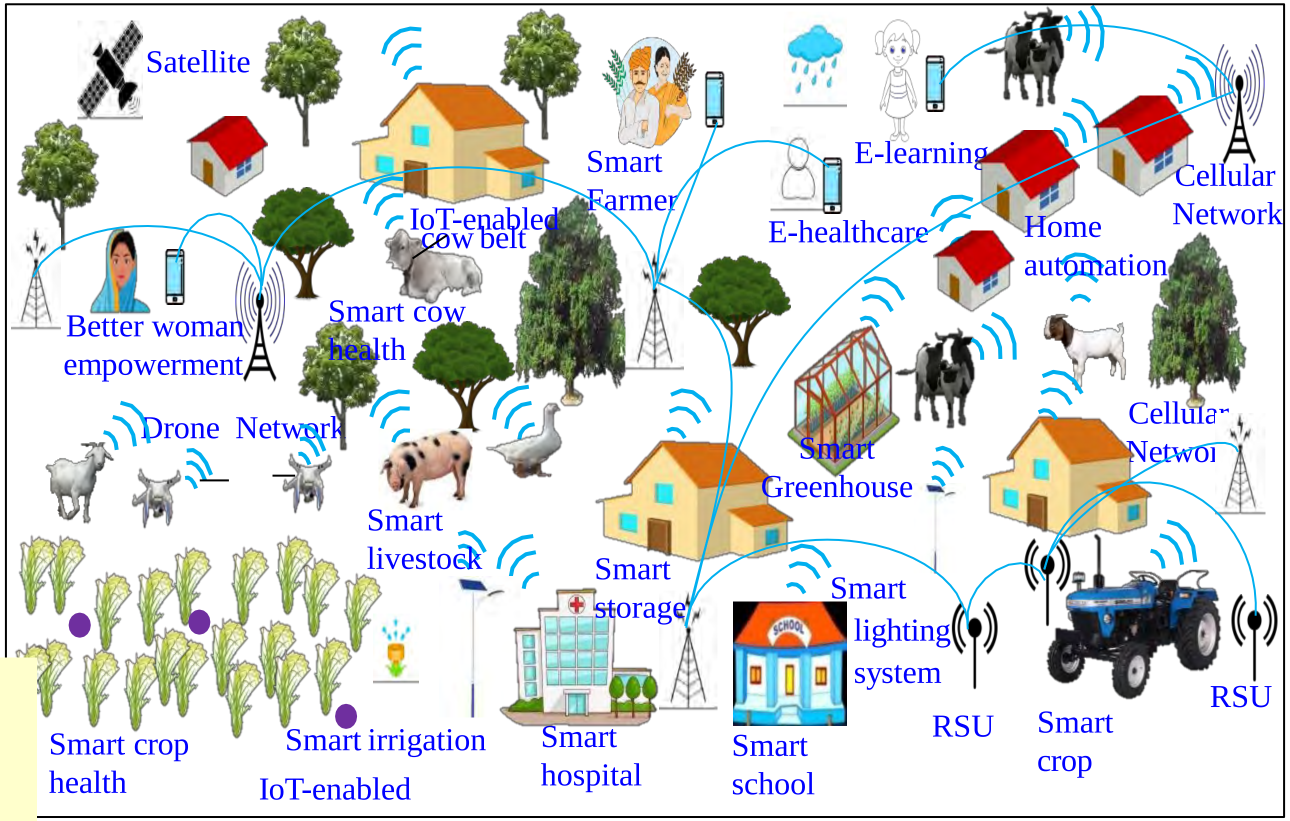
- Year 2050: 70% of world population will be urban

Source: S. P. Mohanty, U. Choppali, and E. Kougianos, “Everything You wanted to Know about Smart Cities”, *IEEE Consumer Electronics Magazine*, Vol. 5, No. 3, July 2016, pp. 60--70.

Smart Cities Vs Smart Villages



Source: http://edwingarcia.info/2014/04/26/principal/



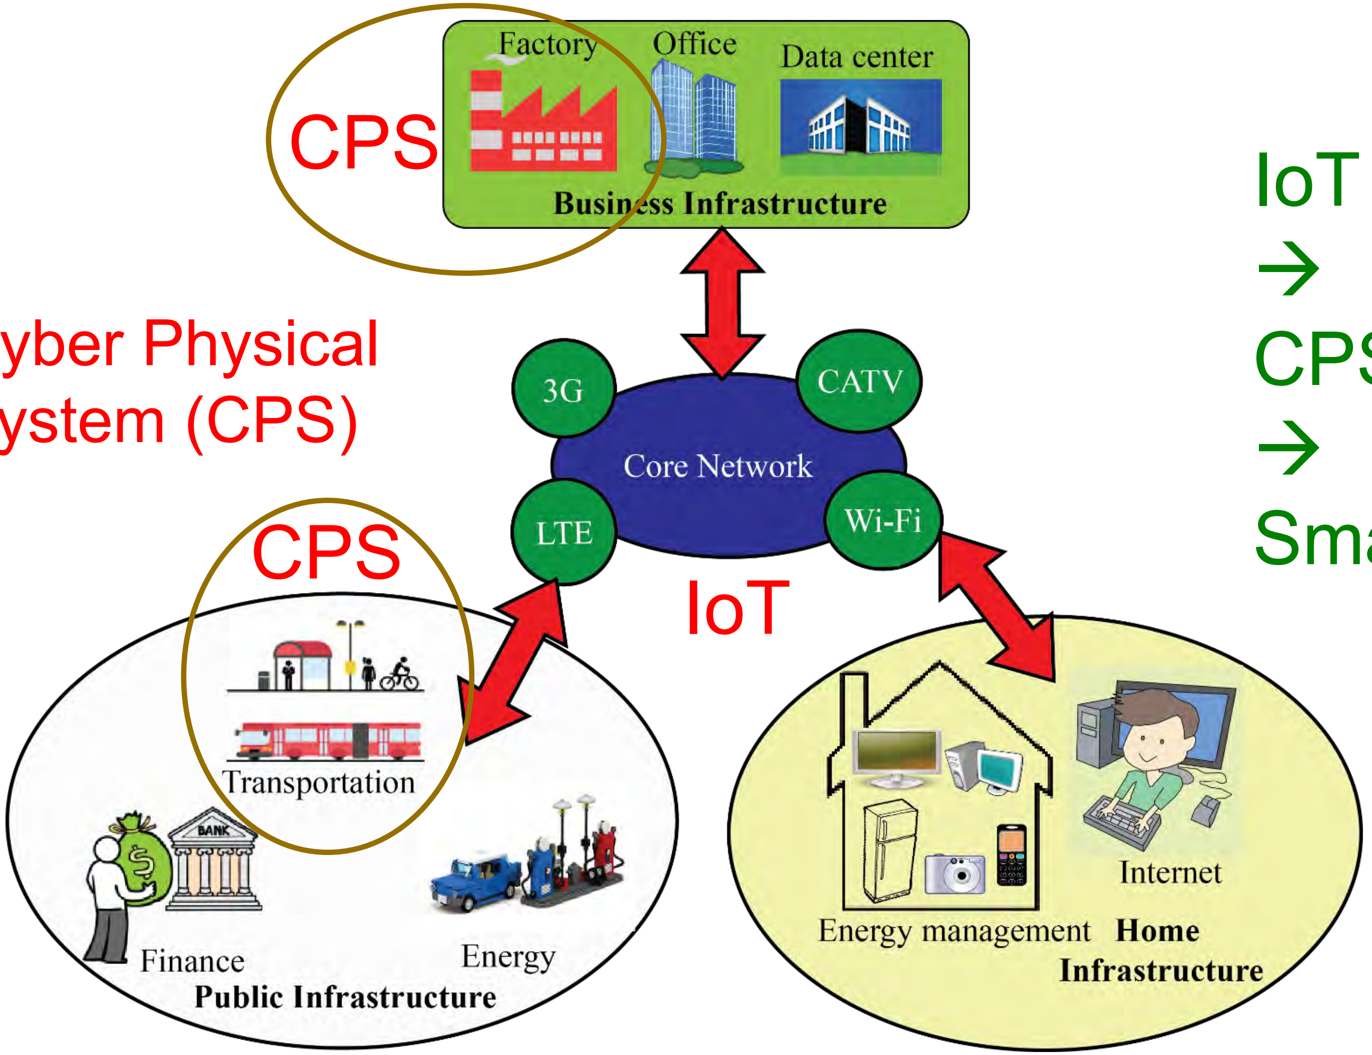
Source; P. Chanak and I. Banerjee, "Internet of Things-enabled Smart Villages: Recent Advances and Challenges," *IEEE Consumer Electronics Magazine*, DOI: 10.1109/MCE.2020.3013244.

Smart Cities
- CPS Types - More
- Design Cost - High
- Operation Cost – High
- Energy Requirement - High

Smart Villages
- CPS Types - Less
- Design Cost - Low
- Operation Cost – Low
- Energy Requirement - Low

IoT → CPS → Smart Cities or Smart Villages

Cyber Physical System (CPS)



IoT
→
CPS (Smart Components)
→
Smart Cities or Smart Villages

IoT is the backbone

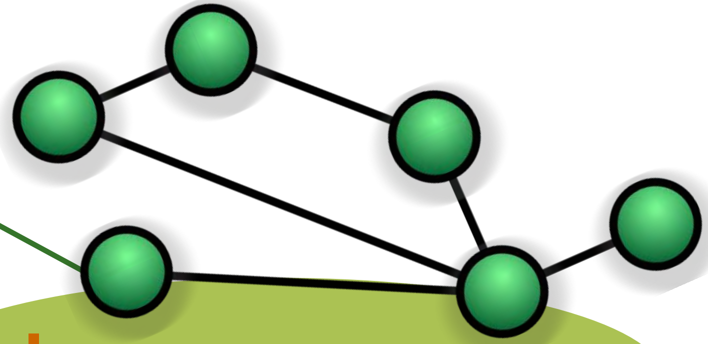
Source: S. P. Mohanty, U. Choppali, and E. Kougianos, “Everything You wanted to Know about Smart Cities”, *IEEE Consumer Electronics Magazine*, Vol. 5, No. 3, July 2016, pp. 60--70.

Smart Cities or Smart Villages - 3 Is

Instrumentation

The 3Is are provided by the Internet of Things (IoT).

Smart Cities

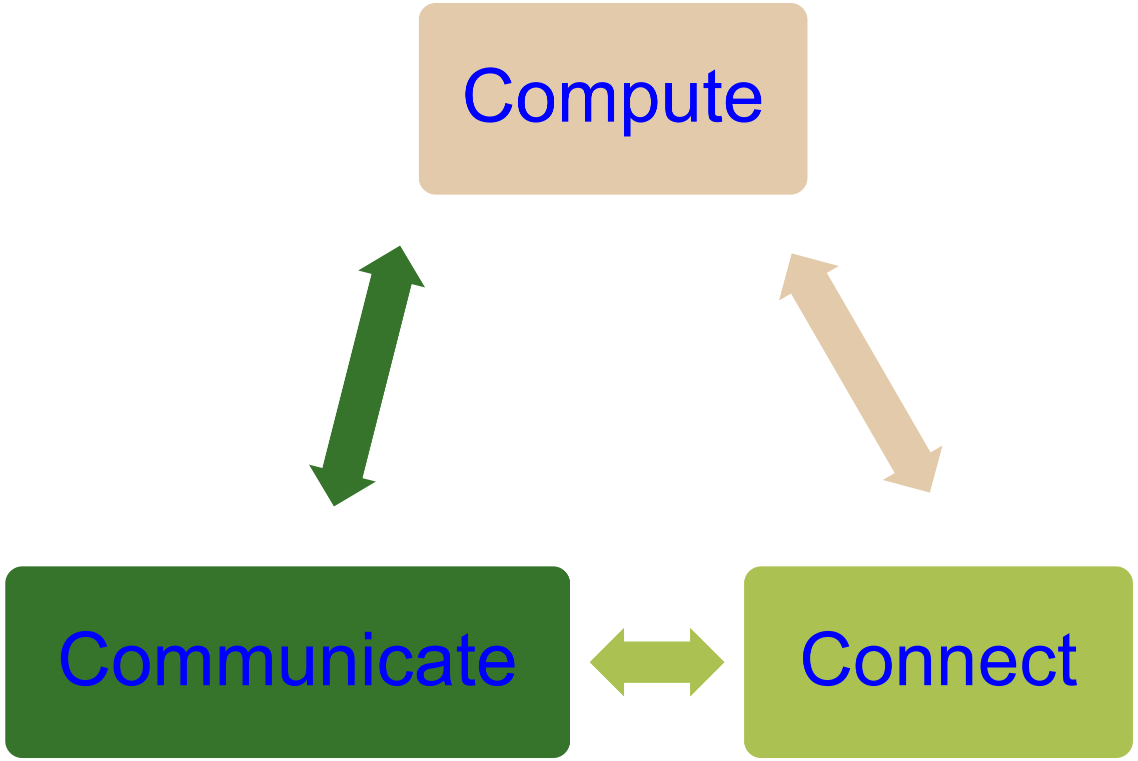


Intelligence

Interconnection

Source: Mohanty ISC2 2019 Keynote

Internet-of-Things (IoT) - 3 Cs

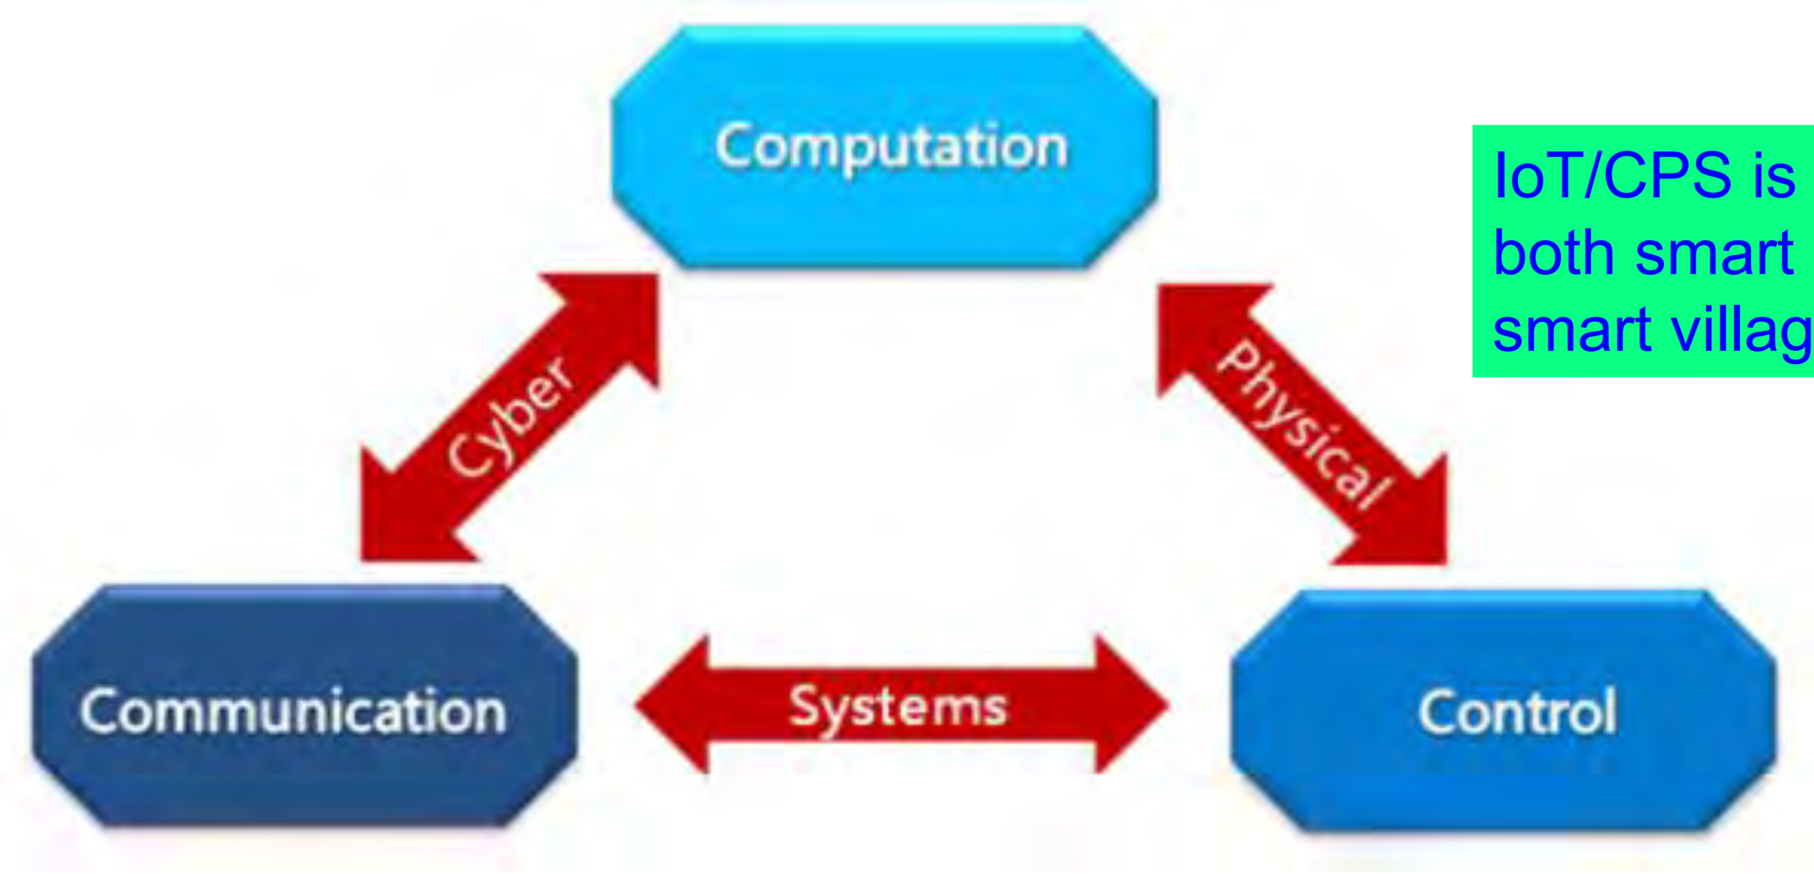


IoT/CPS is needed in both smart cities and smart villages.

3 Cs of CPS - Control, Compute, Communicate

Source: https://www.linkedin.com/pulse/3-cs-internet-things-iot-satish-rao-pullacheri

Cyber-Physical Systems (CPS) - 3 Cs

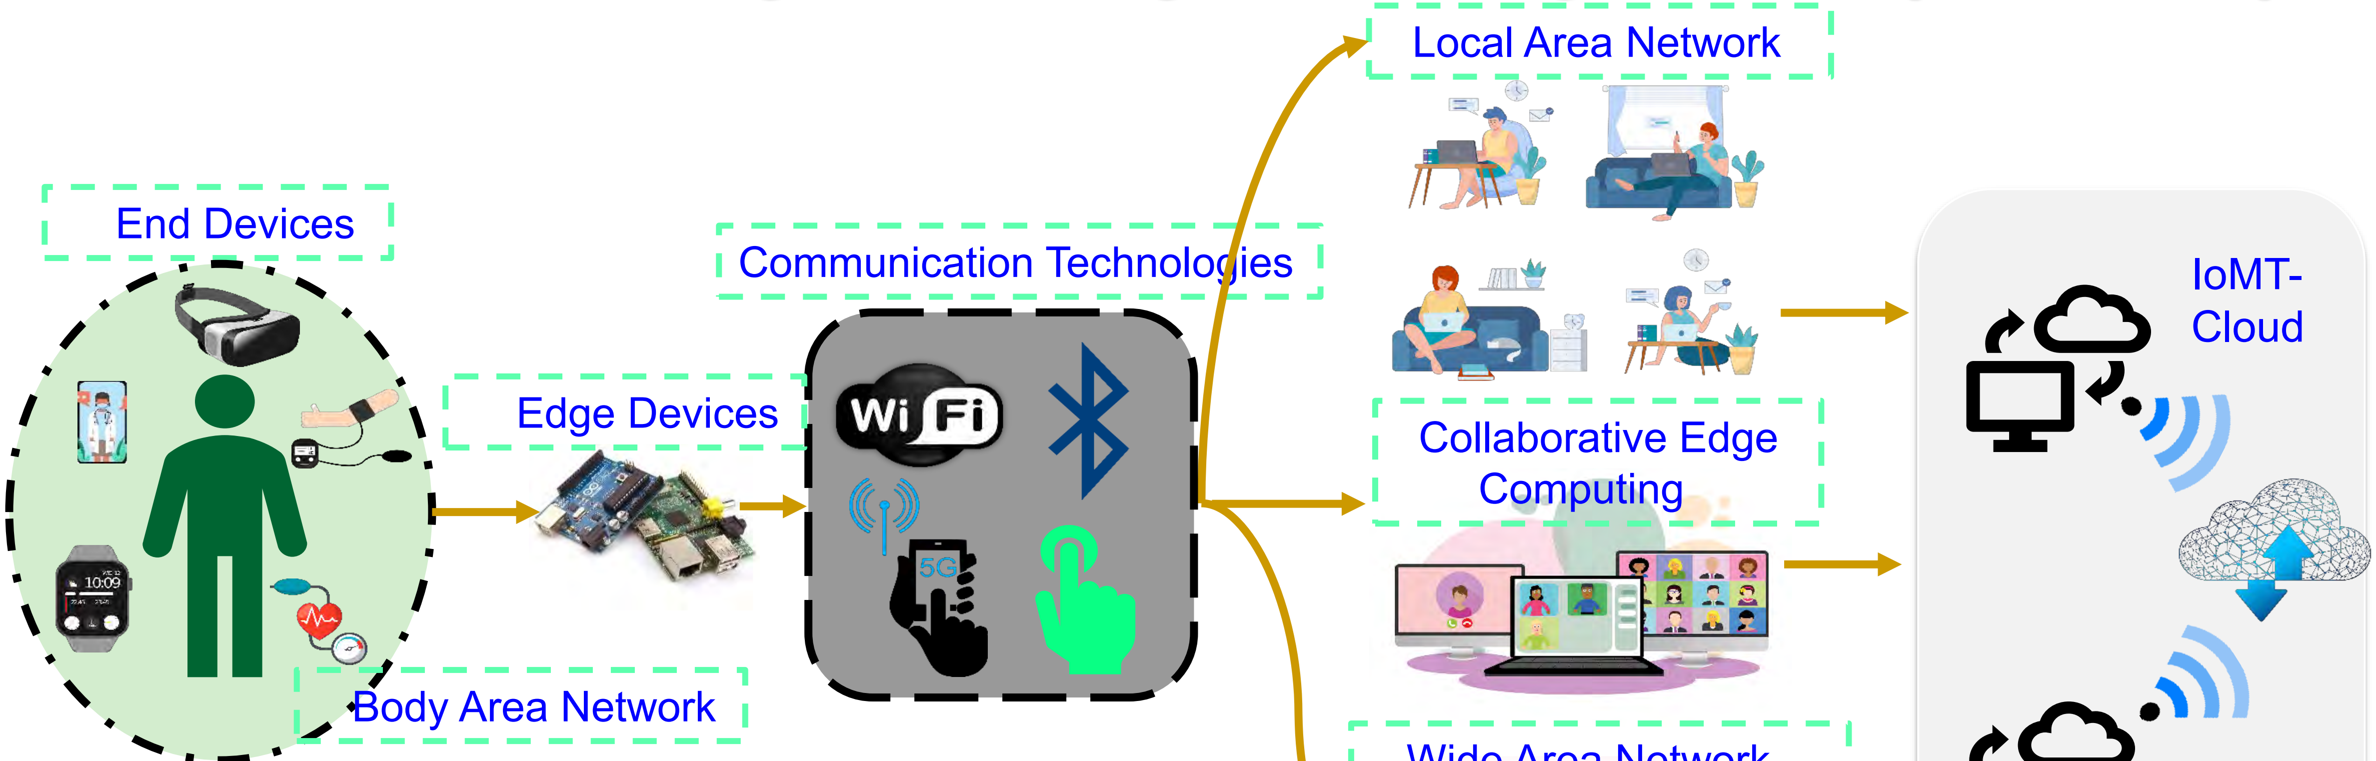


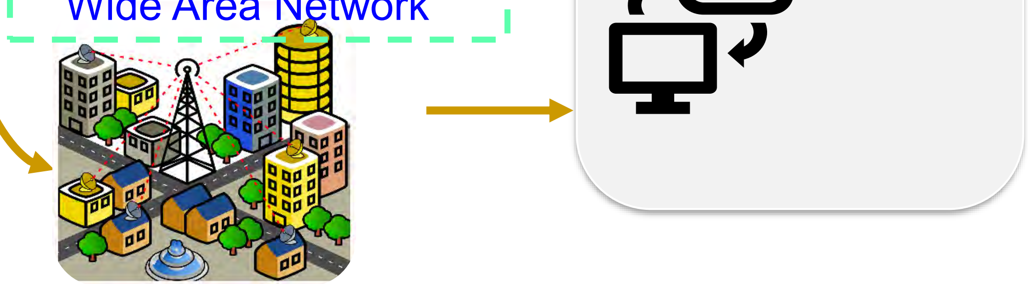
IoT/CPS is needed in both smart cities and smart villages.

3 Cs of IoT - Connect, Compute, Communicate

Source: G. Jinghong, H. Ziwei, Z. Yan, Z. Tao, L. Yajie and Z. Fuxing, "An overview on cyber-physical systems of energy interconnection," in *Proc. IEEE International Conference on Smart Grid and Smart Cities (ICSGSC)*, 2017, pp. 15-21.

Healthcare Cyber-Physical System (H-CPS)

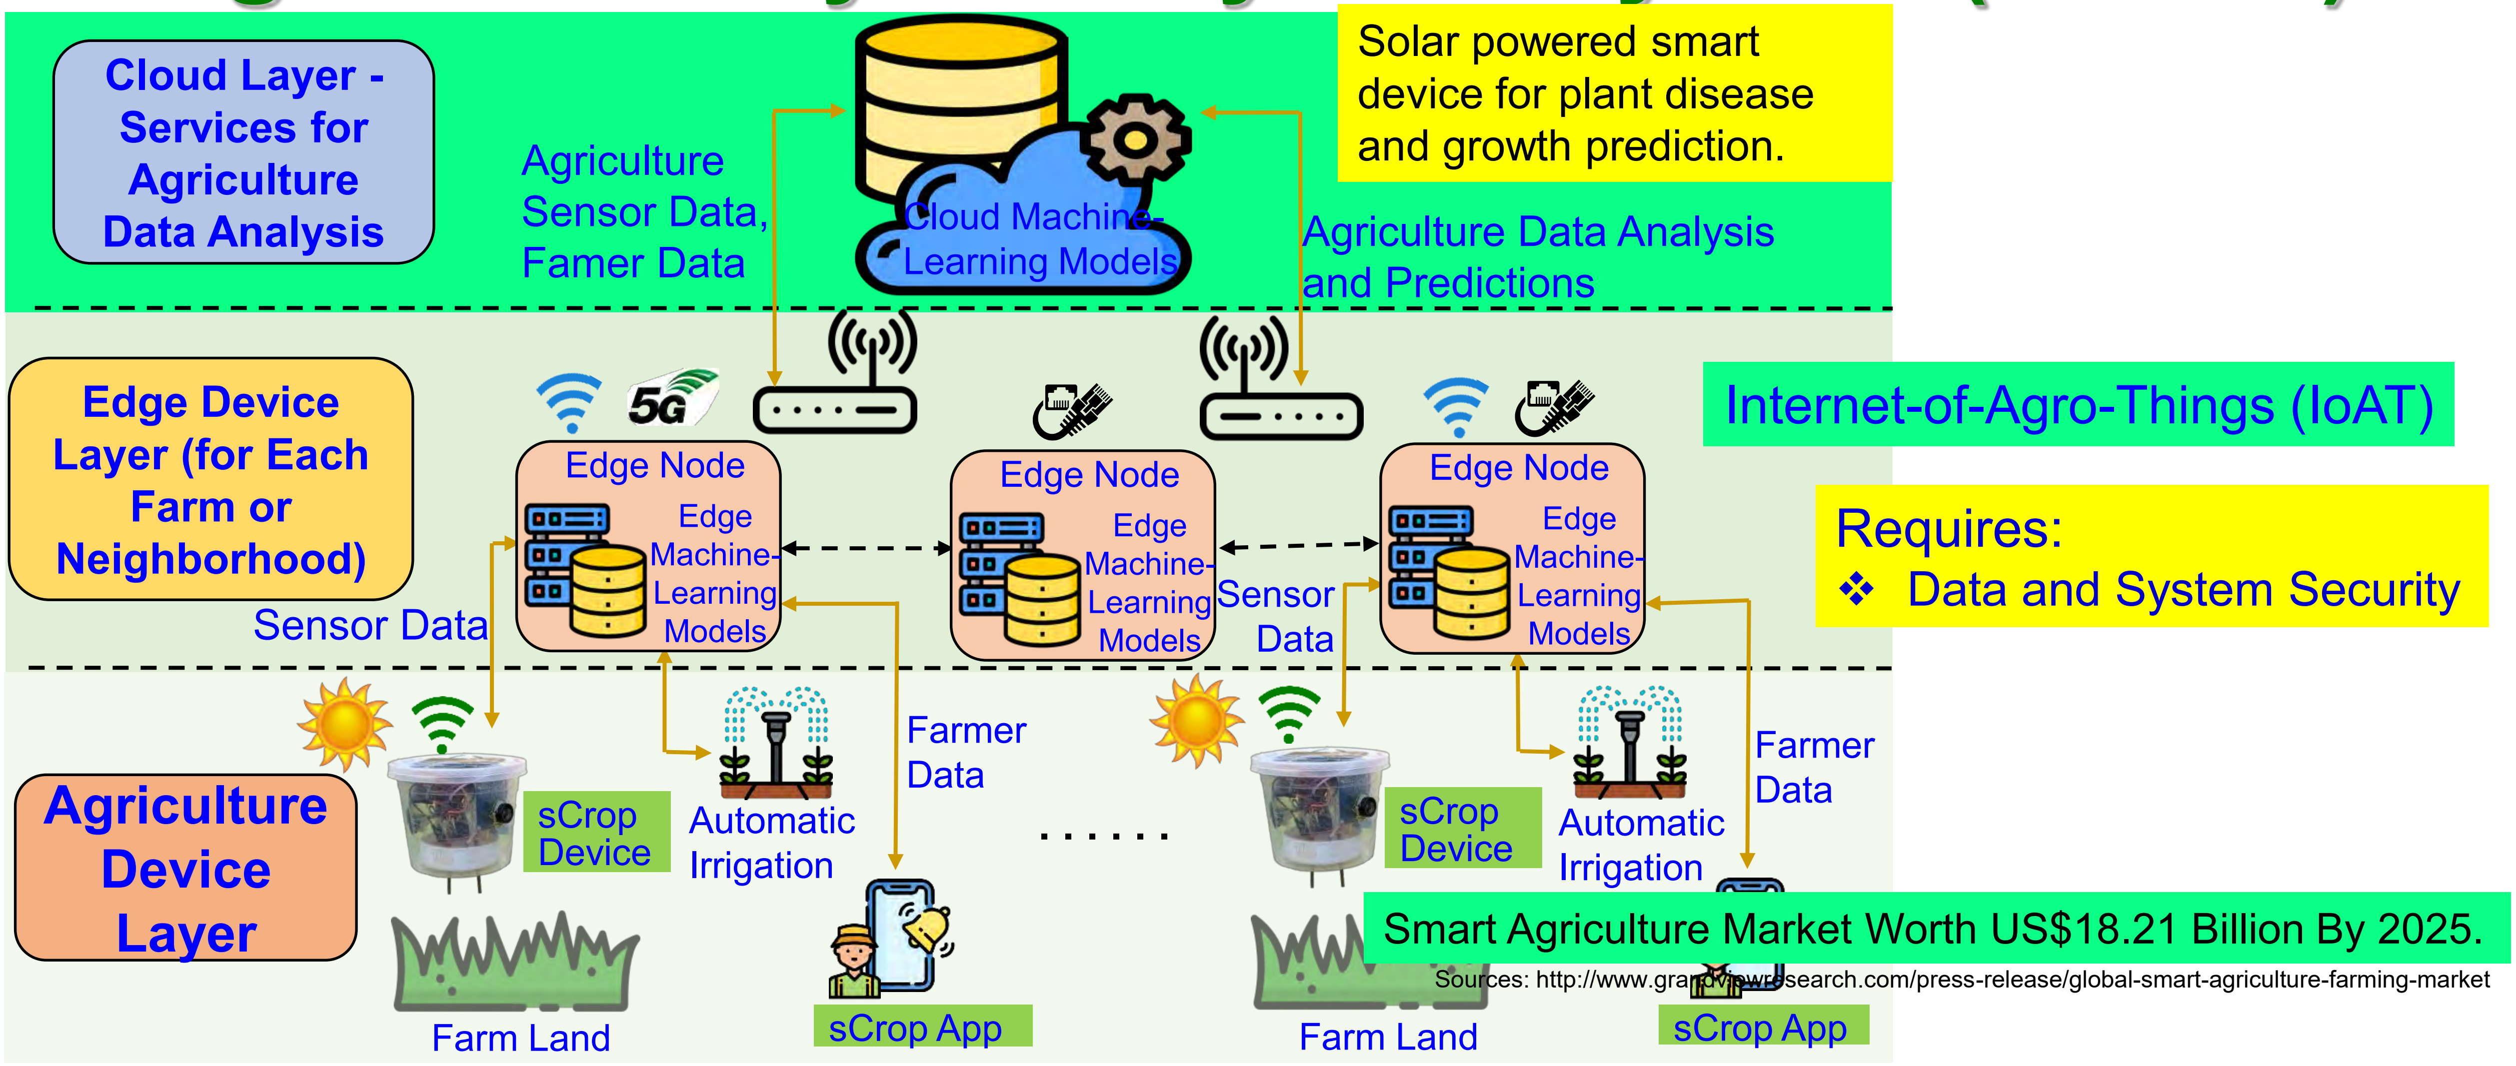




H-CPS ← Biosensors + Medical Devices + Wearable Medical Devices (WMDs) + Implantable Medical Devices (IMDs) + Internet + Healthcare database + AI/ML + Applications that connected through Internet.

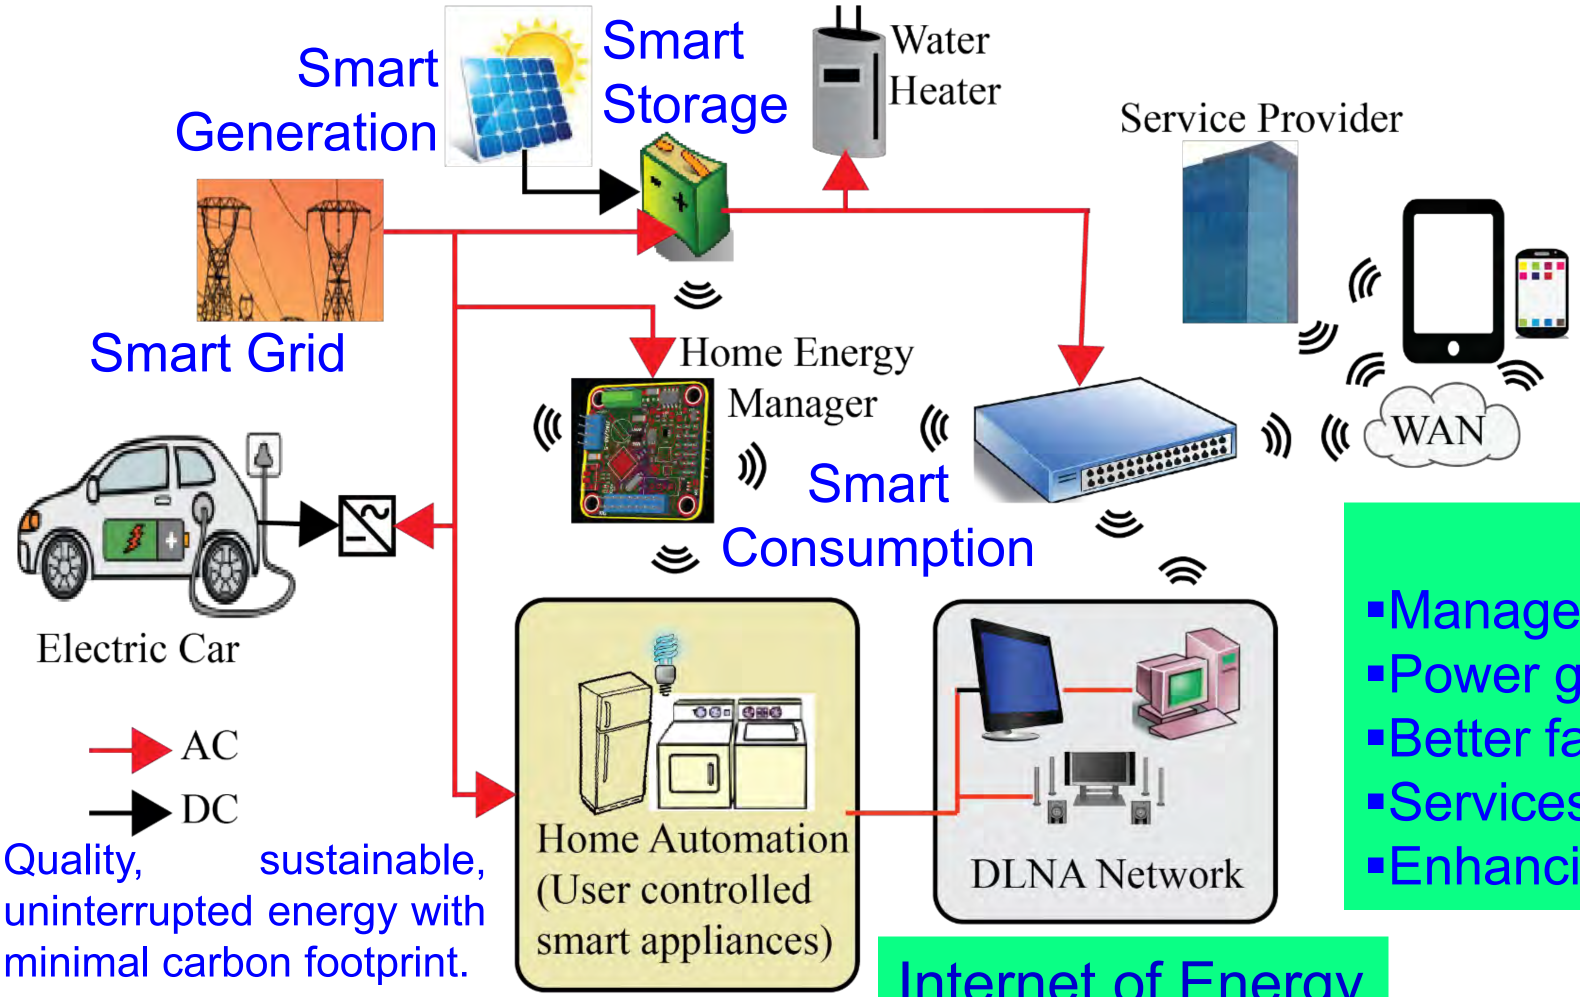
Frost and Sullivan predicts smart healthcare market value to reach US$348.5 billion by 2025.

Agriculture Cyber-Physical System (A-CPS)



Source: V. Udutalapally, S. P. Mohanty, V. Pallagani, and V. Khandelwal, "sCrop: A Novel Device for Sustainable Automatic Disease Prediction, Crop Selection, and Irrigation in Internet-of-Agro-Things for Smart Agriculture", *IEEE Sensors Journal*, Vol. 21, No. 16, August 2021, pp. 17525--17538, DOI: 10.1109/JSEN.2020.3032438.

Energy Cyber-Physical System (E-CPS)



Quality, sustainable, uninterrupted energy with minimal carbon footprint.

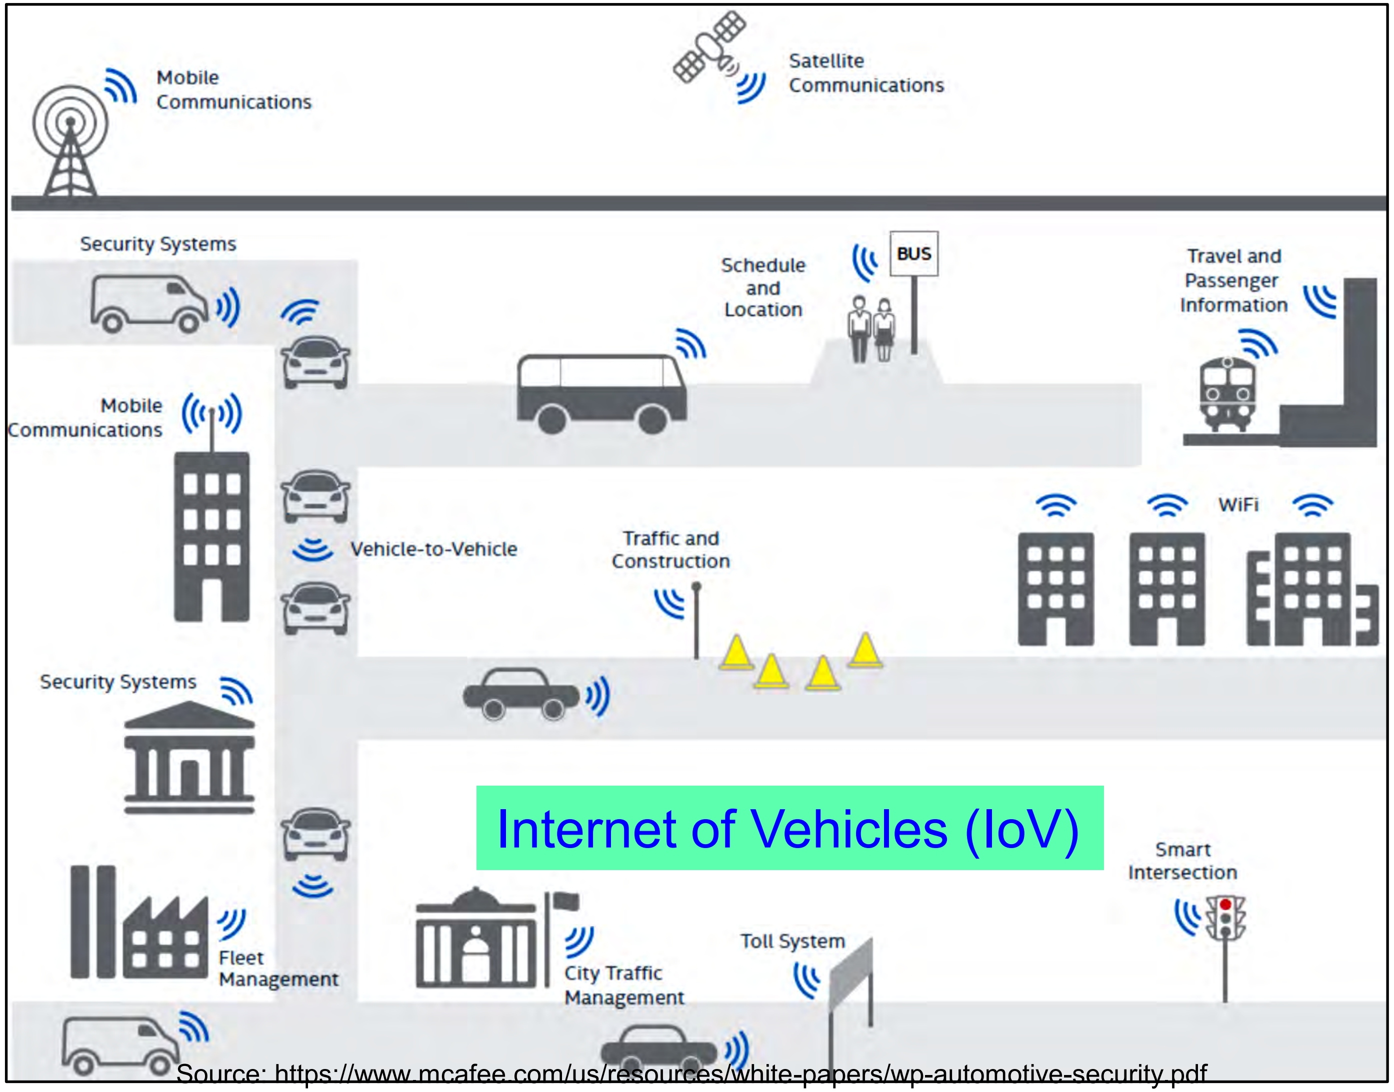
Internet of Energy

Requires:
- ❖ Data, Device, and System Security

IoT Role:
- Management of energy usage
- Power generation dispatch for solar, wind, etc.
- Better fault-tolerance of the grid
- Services for plug-in electric vehicles (PEV)
- Enhancing consumer relationships

Source: S. P. Mohanty, U. Choppali, and E. Kougianos, "Everything You wanted to Know about Smart Cities", *IEEE Consumer Electronics Magazine*, Vol. 5, No. 3, July 2016, pp. 60--70.

Transportation Cyber-Physical System (T-CPS)



Source: https://www.mcafee.com/us/resources/white-papers/wp-automotive-security.pdf

IoT Role Includes:
- Traffic management
- Real-time vehicle tracking
- Vehicle-to-Vehicle communication
- Scheduling of train, aircraft
- Automatic payment/ticket system
- Automatic toll collection

Requires:
- ❖ Data, Device, and System Security
- ❖ Location Privacy

"The global market of IoT based connected cars is expected to reach $46 Billion by 2020."

Security Challenges – Information

Online Banking

Credit Card Theft

Hacked: Linkedin, Tumbler, & Myspace

Linked in
tumblr.
myspace

Who did it: A hacker going by the name Peace.
What was done: 500 million passwords were stolen.

Details: Peace had the following for sale on a Dark Web Store:
- 167 million Linkedin passwords
- 360 million Myspace passwords
- 68 million Tumbler passwords
- 100 million VK.com passwords
- 71 million Twitter passwords

Personal Information

Credit Card/Unauthorized Shopping

Smart Car – Modification of Input Signal of Control Can be Dangerous

- Typically vehicles are controlled by human drivers
- Designing an Autonomous Vehicle (AV) requires decision chains.
- AV actuators controlled by algorithms.
- Decision chain involves sensor data, perception, planning and actuation.
- Perception transforms sensory data to useful information.
- Planning involves decision making.

Challenges of Data in IoT/CPS are Multifold

Data Curation

Data Cost

Data Storage

Lots of Data

Data Ownership

Data Modeling

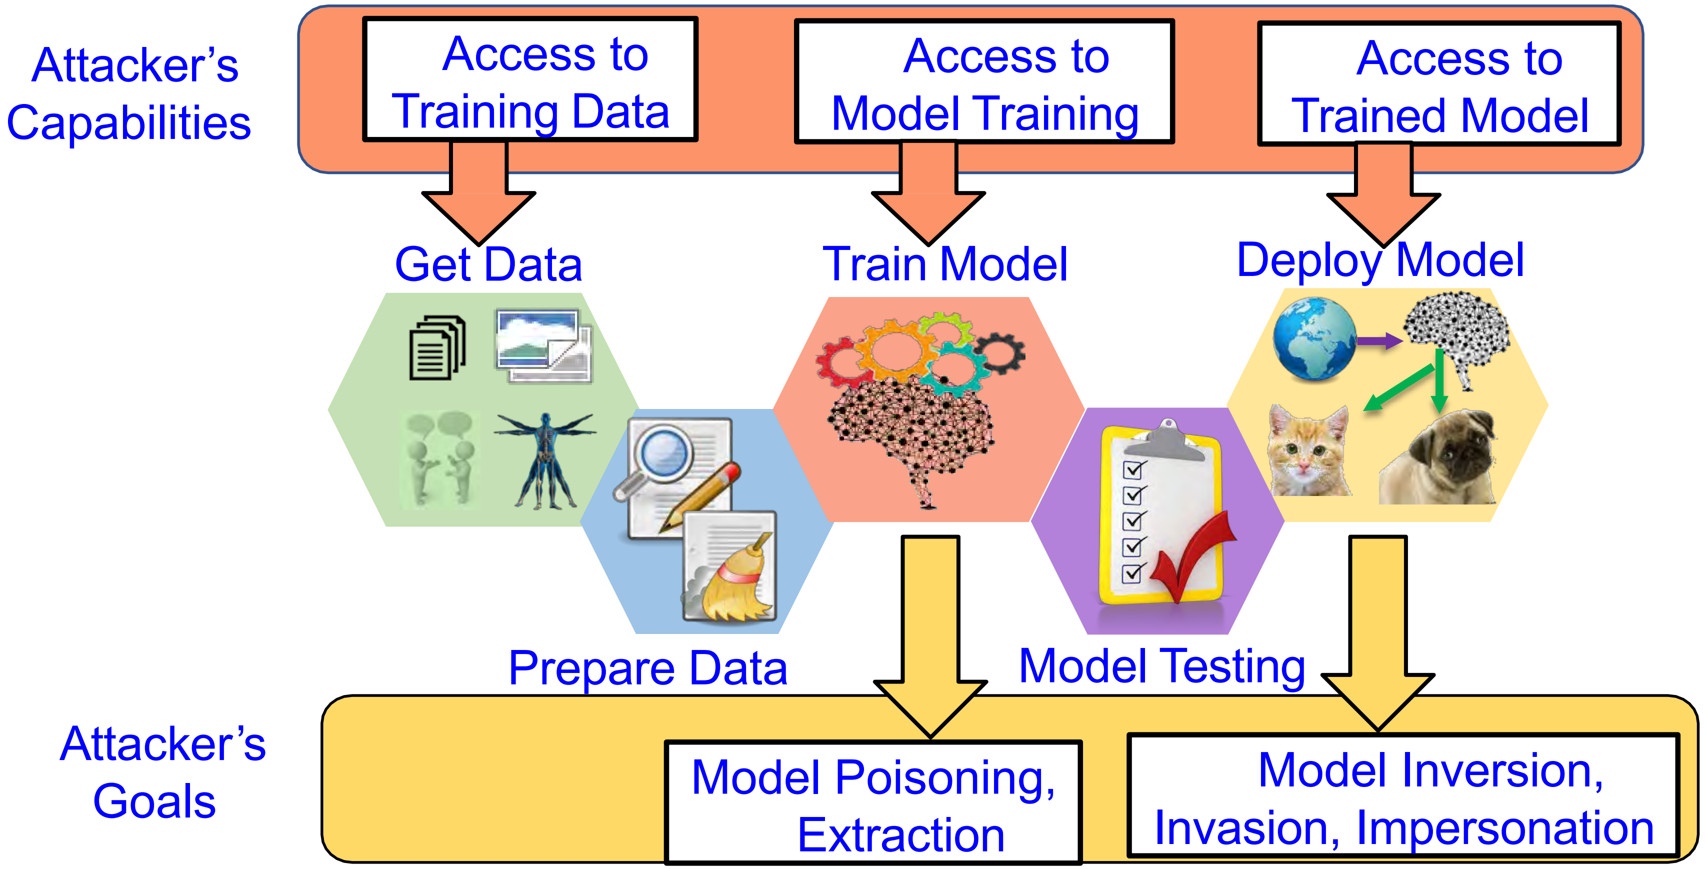
Data Quality

DNNs are not Always Smart

- Why not use Fake Data?
- "Fake Data" has some interesting advantages:
  - Avoids *privacy issues* and side-steps *new regulations* (e.g. General Data Protection Regulation or GDPR)
  - Significant cost reductions in data acquisition and annotation for big datasets

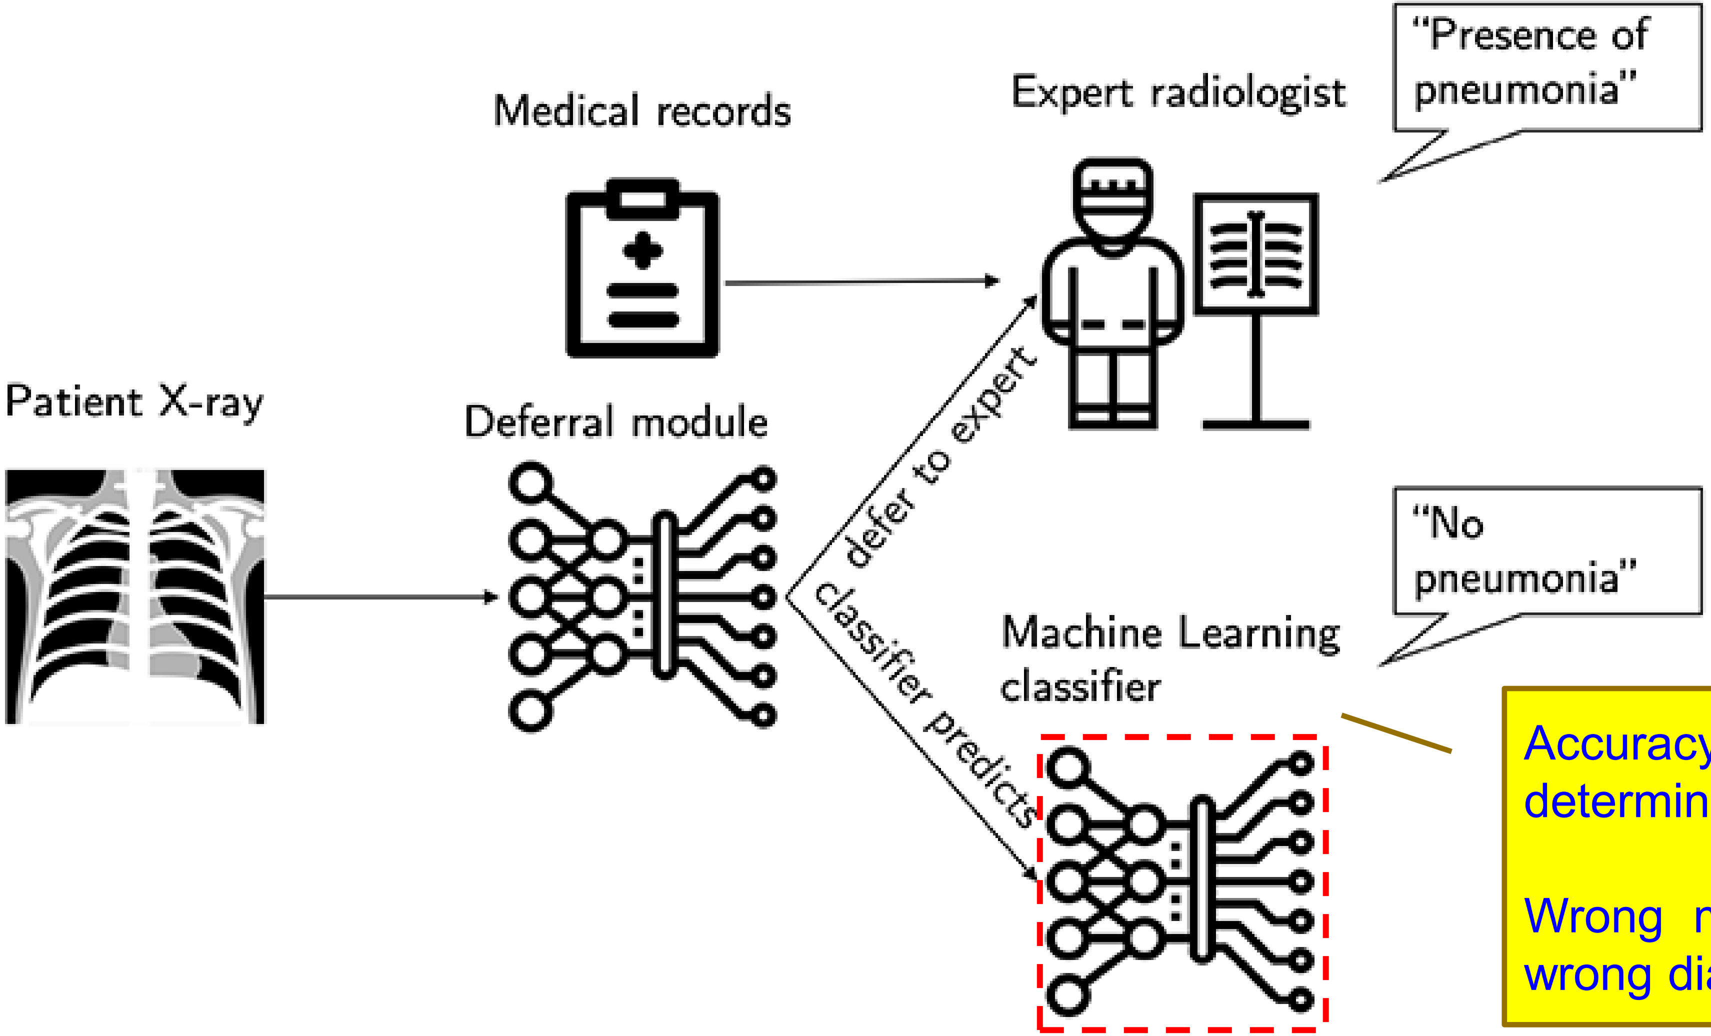
Source: Corcoran Keynote 2018

AI Security - Attacks



Source: Sandip Kundu ISVLSI 2019 Keynote.

Wrong ML Model → Wrong Diagnosis

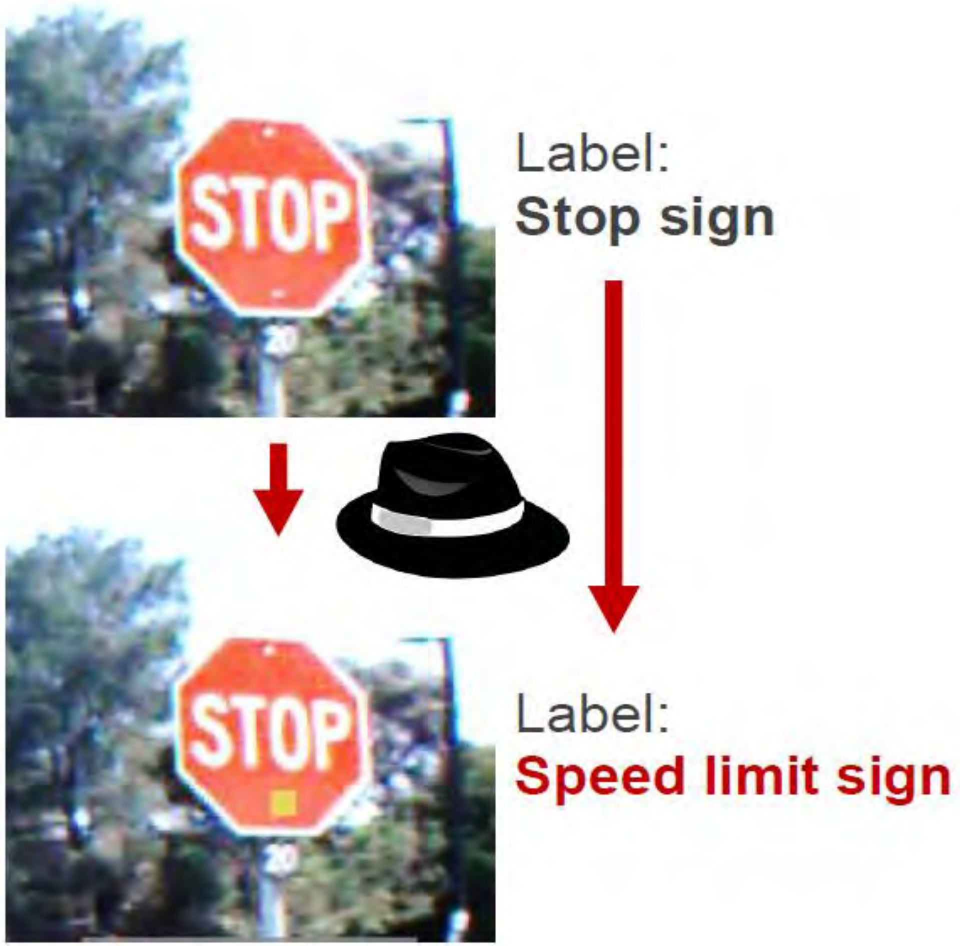


Accuracy is important determine pneumonia

Wrong model can lead to wrong diagnosis altogether

Source: https://www.healthcareitnews.com/news/new-ai-diagnostic-tool-knows-when-defer-human-mit-researchers-say

AI Security - Trojans in Artificial Intelligence (TrojAI)



Adversaries can insert **Trojans** into AIs, leaving a trigger for bad behavior that they can activate during the AI's operations

Source: https://www.iarpa.gov/index.php?option=com_content&view=article&id=1150&Itemid=448

Fake Data and Fake Hardware – Both are Equally Dangerous in CPS

AI can be fooled by fake data

AI can create fake data (Deepfake)

Authentic Fake

An implantable medical device

Authentic Fake

A plug-in for car-engine computers

Fake Medicine - Serious Global Issue

- It is estimated that close to $83 billion worth of counterfeit drugs are sold annually.
- One in 10 medical products circulating in developing countries are substandard or fake.
- In Africa: Counterfeit antimalarial drugs results in more than 120,000 deaths each year.
- USA has a closed drug distribution system intended to prevent counterfeits from entering U.S. markets, but it isn't foolproof due to many reason including illegal online pharmacy.

Source: https://fraud.org/fakerx/fake-drugs-and-their-risks/counterfeit-drugs-are-a-global-problem/

Source: https://allaboutpharmacovigilance.org/be-aware-of-counterfeit-medicine/

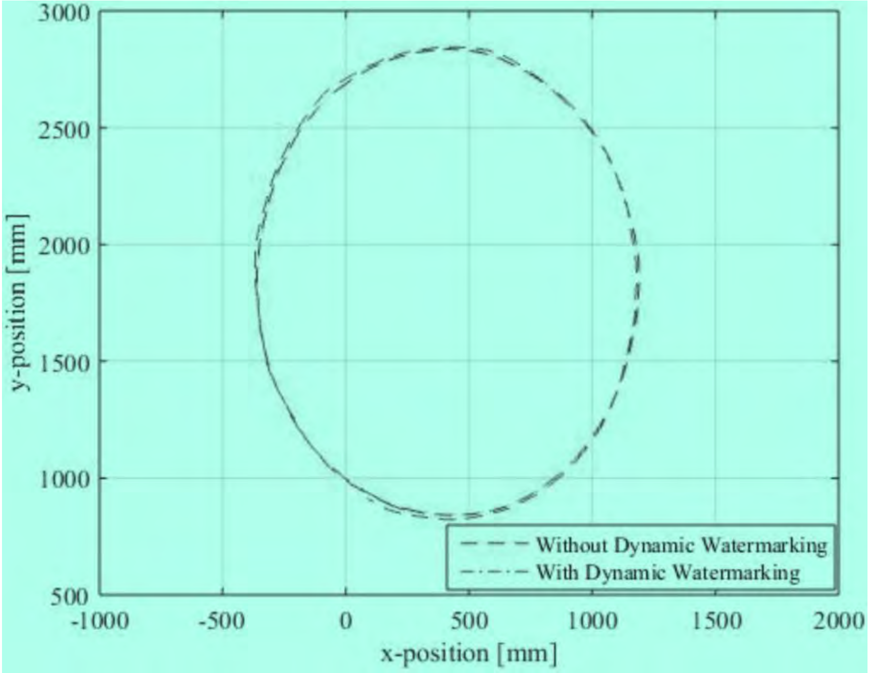
Autonomous Car Cybersecurity – Collision Avoidance

- Attack: Feeding of malicious sensor measurements to the control and the collision avoidance module. Such an attack on a position sensor can result in collisions between the vehicles.
- Solutions: "**Dynamic Watermarking**" of signals to detect and stop such attacks on cyber-physical systems.
- Idea: Superimpose each actuator *i* a random signal $e_i[t]$ (watermark) on control policy-specified input.



Source: Ko 2016, CPS-Sec 2016

Drawbacks of Existing Cybersecurity Solutions

IT Cybersecurity Solutions Can't be Directly Extended to IoT/CPS Cybersecurity

IT Cybersecurity

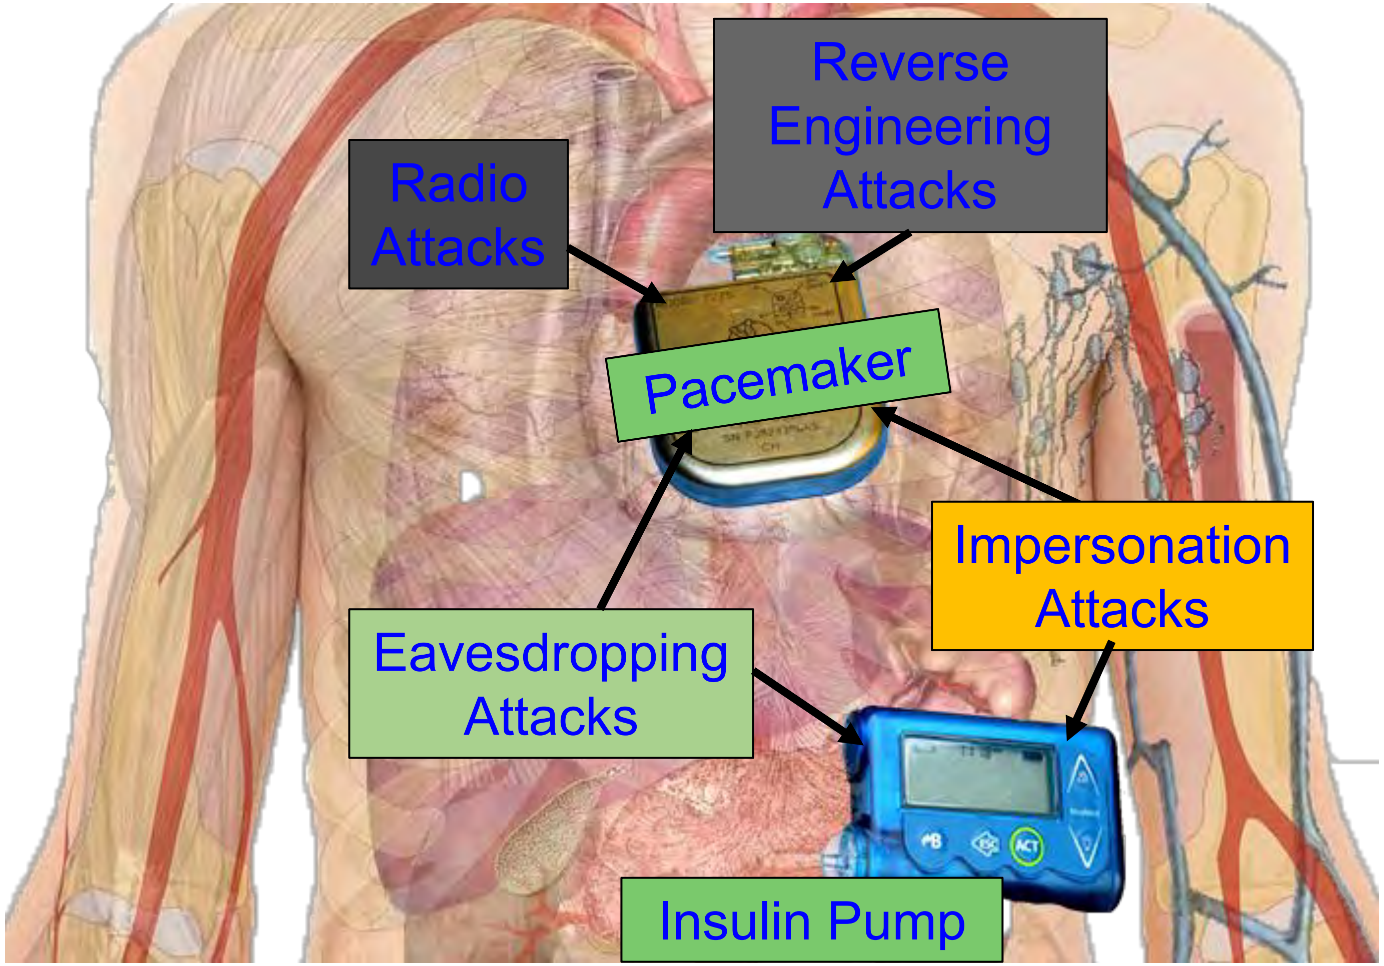
- IT infrastructure may be well protected rooms
- Limited variety of IT network devices
- Millions of IT devices
- Significant computational power to run heavy-duty security solutions
- IT security breach can be costly

IoT Cybersecurity

- IoT may be deployed in open hostile environments
- Significantly large variety of IoT devices
- Billions of IoT devices
- May not have computational power to run security solutions
- IoT security breach (e.g. in a IoMT device like pacemaker, insulin pump) can be life threatening

Incorporation of Cybersecurity of Electronic Systems, IoT, CPS, needs Energy, and hence affects Performance.

Cybersecurity Measures in Healthcare Cyber-Physical Systems is Hard

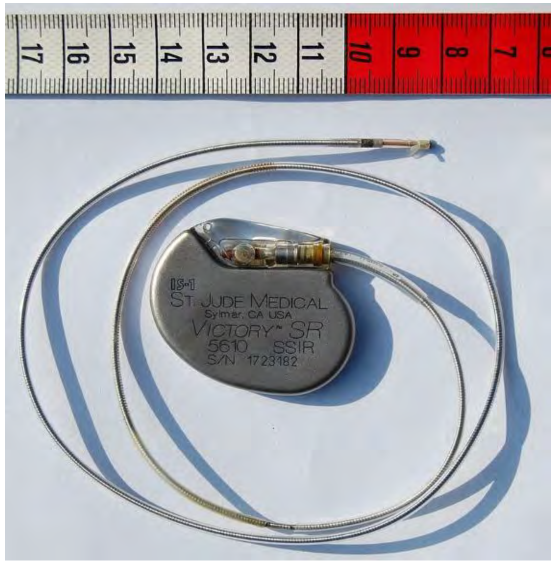


Collectively (WMD+IMD): Implantable and Wearable Medical Devices (IWMDs)

Implantable and Wearable Medical Devices (IWMDs):

→ Longer Battery life
→ Safer device
→ Smaller size
→ Smaller weight
→ Not much computational capability

H-CPS Cybersecurity Measures is Hard - Energy Constrained



Pacemaker
Battery Life
- 10 years

Neurostimulator
Battery Life
- 8 years

- ➢ Implantable Medical Devices (IMDs) have integrated battery to provide energy to all their functions → Limited Battery Life depending on functions
- ➢ Higher battery/energy usage → Lower IMD lifetime
- ➢ Battery/IMD replacement → Needs surgical risky procedures

Source: C. Camara, P. Peris-Lopeza, and J. E.Tapiadora, "Security and privacy issues in implantable medical devices: A comprehensive survey", *Elsevier Journal of Biomedical Informatics*, Volume 55, June 2015, Pages 272-289.

Smart Car Cybersecurity - Latency Constrained

Protecting Communications
Particularly any Modems for In-vehicle Infotainment (IVI) or in On-board Diagnostics (OBD-II)

Over The Air (OTA) Management
From the Cloud to Each Car

Cars can have 100 Electronic Control Units (ECUs) and 100 million lines of code, each from different vendors – Massive cybersecurity issues.

Protecting Each Module
Sensors, Actuators, and Anything with an Microcontroller Unit (MCU)

Mitigating Advanced Threats
Analytics in the Car and in the Cloud

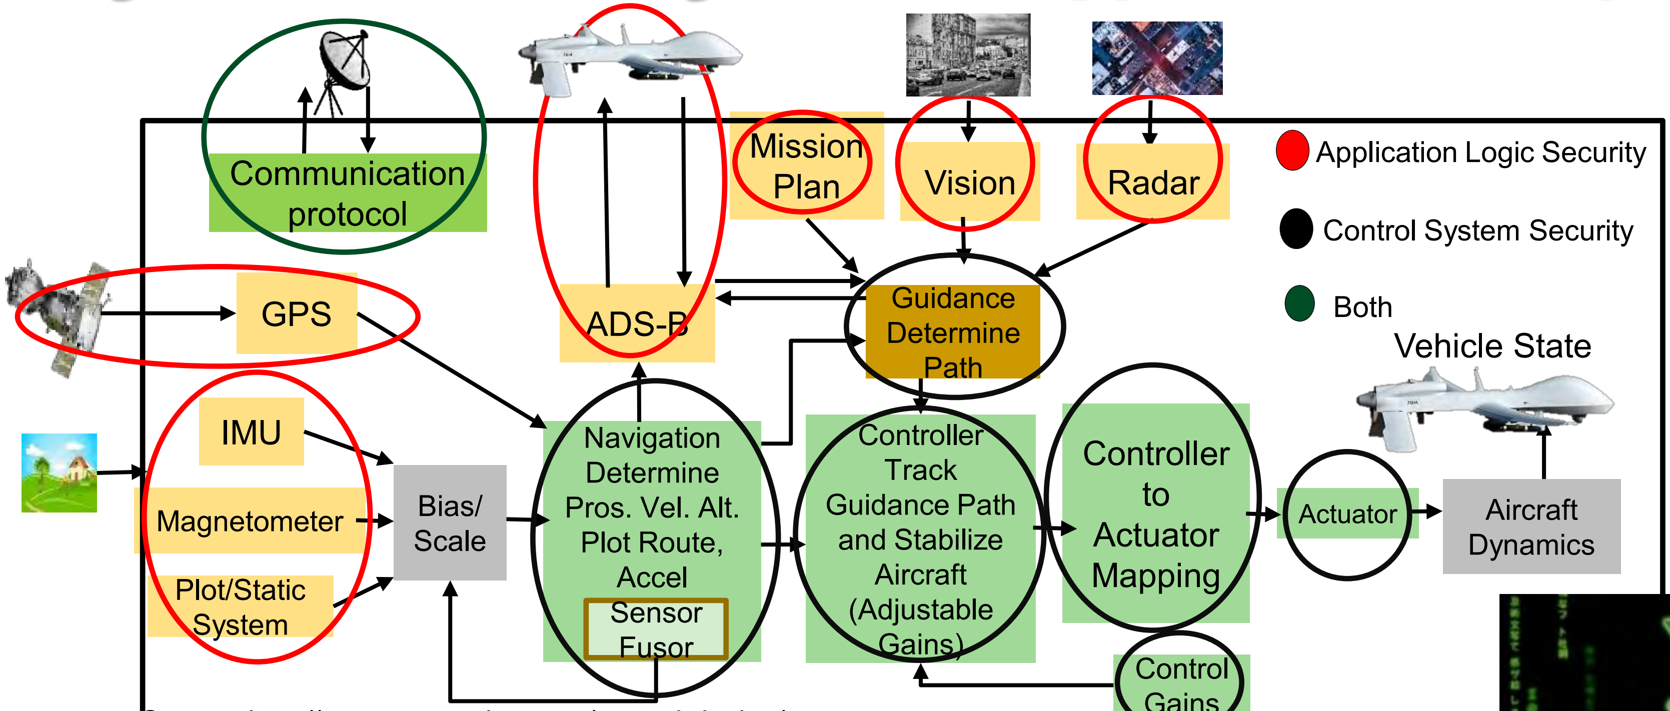
Source: http://www.symantec.com/content/en/us/enterprise/white_papers/public-building-security-into-cars-20150805.pdf

- Connected cars require latency of ms to communicate and avoid impending crash:
  - Faster connection
  - Low latency
  - Energy efficiency

Security Mechanism Affects:
- Latency
- Mileage
- Battery Life

Car Cybersecurity – Latency Constrained

UAV Cybersecurity - Energy & Latency Constrained



Source: http://www.secmation.com/control-design/

Source: http://politicalblindspot.com/u-s-drone-hacked-and-hijacked-with-ease/

Cybersecurity Mechanisms Affect:

Battery Life | Latency | Weight | Aerodynamics

UAV Security – Energy and Latency Constraints

Smart Grid Security Constraints

- Smart Grid – Security Objectives
  - Availability
  - Integrity
  - Confidentiality

- Smart Grid – Security Requirements
  - Identification
  - Authentication
  - Authorization
  - Trust
  - Access Control
  - Privacy

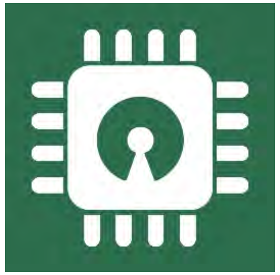
- Smart Grid – Security Solution Constraints
  - Transactions Latency
  - Communication Latency
  - Transactions Computational Overhead
  - Energy Overhead on Embedded Devices
  - Security Budget

Source: R. K. Pandey and M. Misra, "Cyber security threats - Smart grid infrastructure," in *Proc. National Power Systems Conference (NPSC)*, 2016, pp. 1-6.

Cybersecurity Attacks – Software Vs Hardware Based

Software Based

- Software attacks via communication channels
- Typically from remote
- More frequent
- Selected Software based:
  - Denial-of-Service (DoS)
  - Routing Attacks
  - Malicious Injection
  - Injection of fraudulent packets
  - Snooping attack of memory
  - Spoofing attack of memory and IP address
  - Password-based attacks

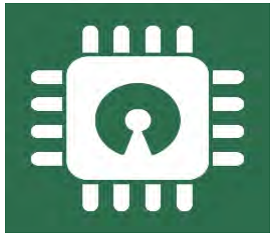


Hardware Based

- Hardware or physical attacks
- Maybe local
- More difficult to prevent
- Selected Hardware based:
  - Hardware backdoors (e.g. Trojan)
  - Inducing faults
  - Electronic system tampering/ jailbreaking
  - Eavesdropping for protected memory
  - Side channel attack
  - Hardware counterfeiting

Source: Mohanty ICCE Panel 2018

Cybersecurity Solutions – Software Vs Hardware Based



Software Based	Hardware Based

Software Based

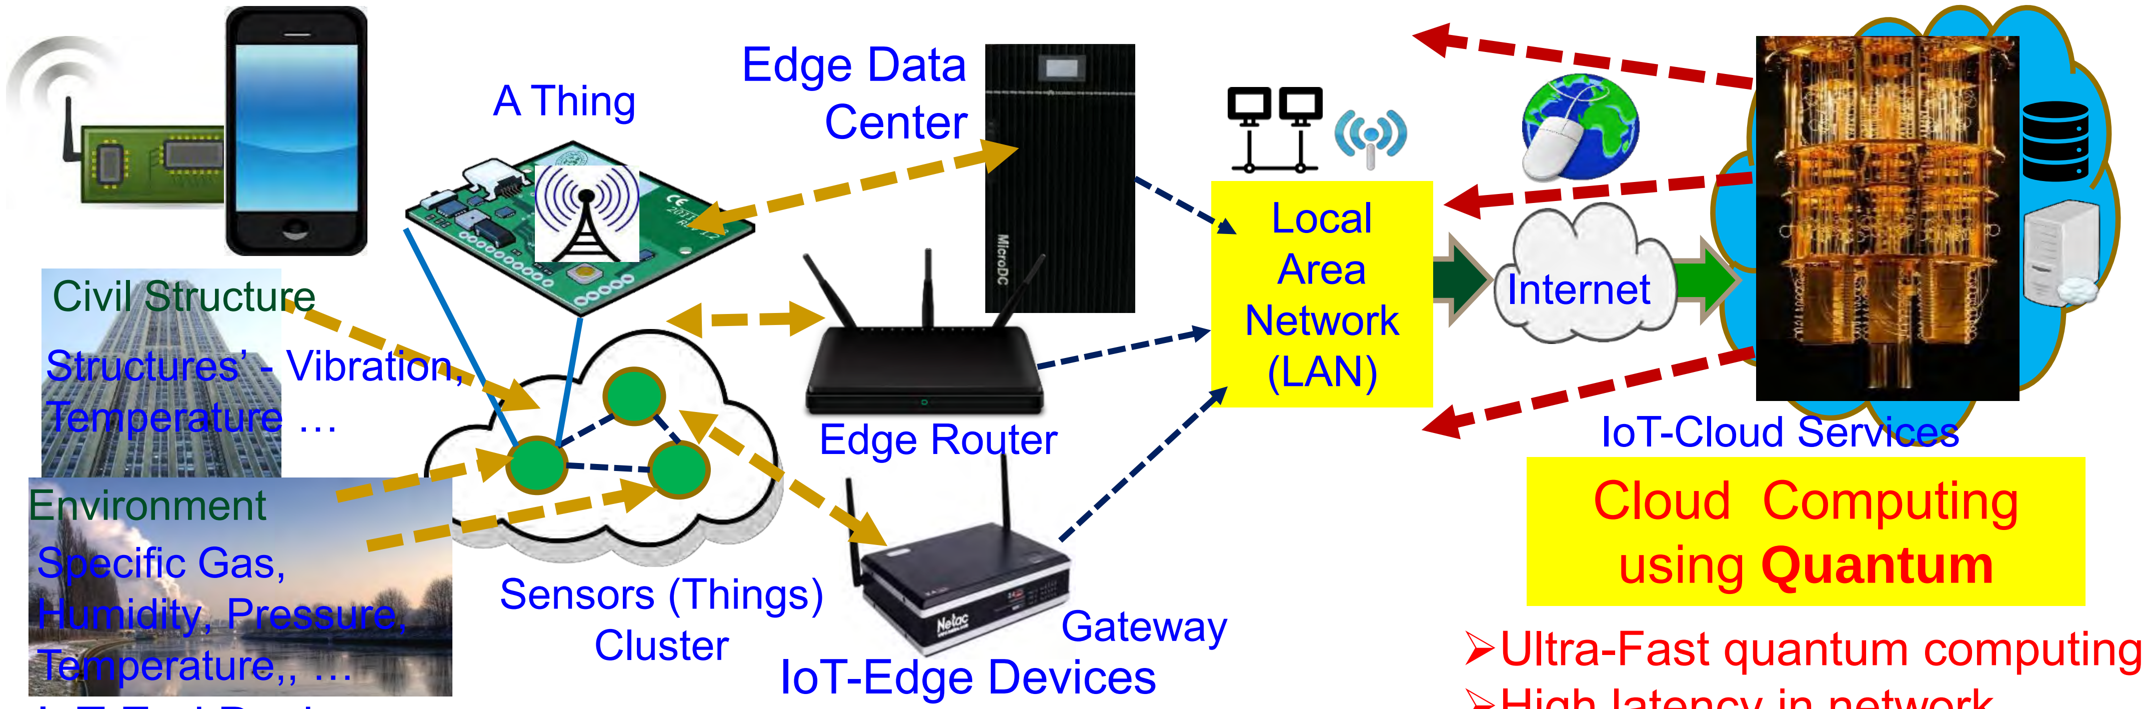
- Introduces latency in operation
- Flexible - Easy to use, upgrade and update
- Wider-Use - Use for all devices in an organization
- Higher recurring operational cost
- Tasks of encryption easy compared to hardware – substitution tables
- Needs general purpose processor to run
- Can't stop hardware reverse engineering

Source: Mohanty ICCE Panel 2018

Hardware Based

- High-Speed operation
- Energy-Efficient operation
- Low-cost using ASIC and FPGA
- Tasks of encryption easy compared to software – bit permutation
- Easy integration in electronic systems
- Possible security at source-end like sensors, better suitable for IoT
- Susceptible to side-channel attacks
- Can't stop software reverse engineering

Cybersecurity Nightmare ← Quantum Computing



Cloud Computing using Quantum

- Ultra-Fast quantum computing resources
- High latency in network
- Breaks every encryption in no time

Edge Computing

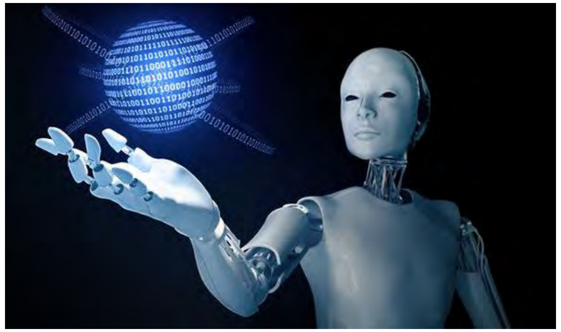
- Less computational resource
- Minimal latency in network
- Lightweight security

In-Sensor/End-Device Computing

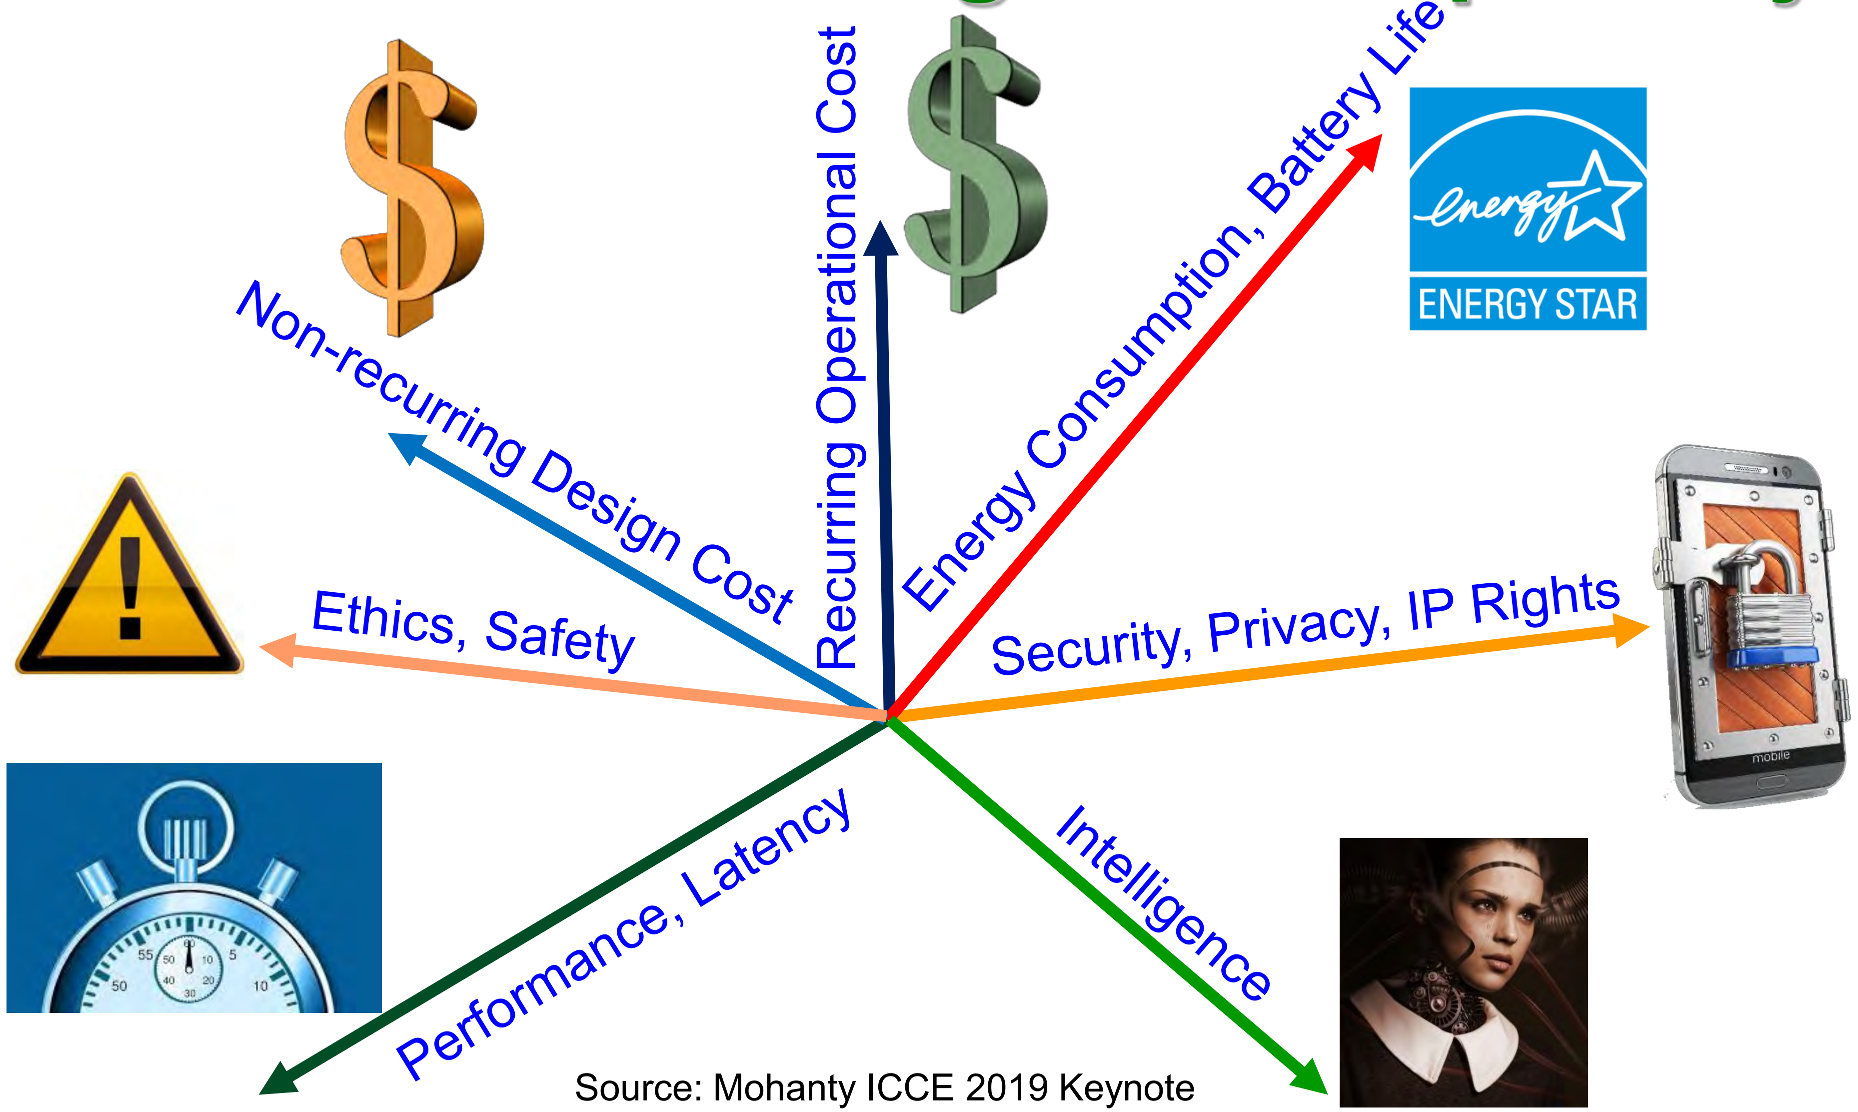
- Minimal computational resource
- Negligible latency in network
- Very lightweight security

A quantum computer could break a 2048-bit RSA encryption in 8 hours.

Security-by-Design (SbD) – The Principle



IoT/CPS Design – Multiple Objectives



Source: Mohanty ICCE 2019 Keynote

Smart Cities
Vs
Smart Villages

Privacy by Design (PbD) → General Data Protection Regulation (GPDR)

1995
Privacy by Design (PbD)

- Treat privacy concerns as design requirements when developing technology, rather than trying to retrofit privacy controls after it is built

2018
General Data Protection Regulation (GDPR)

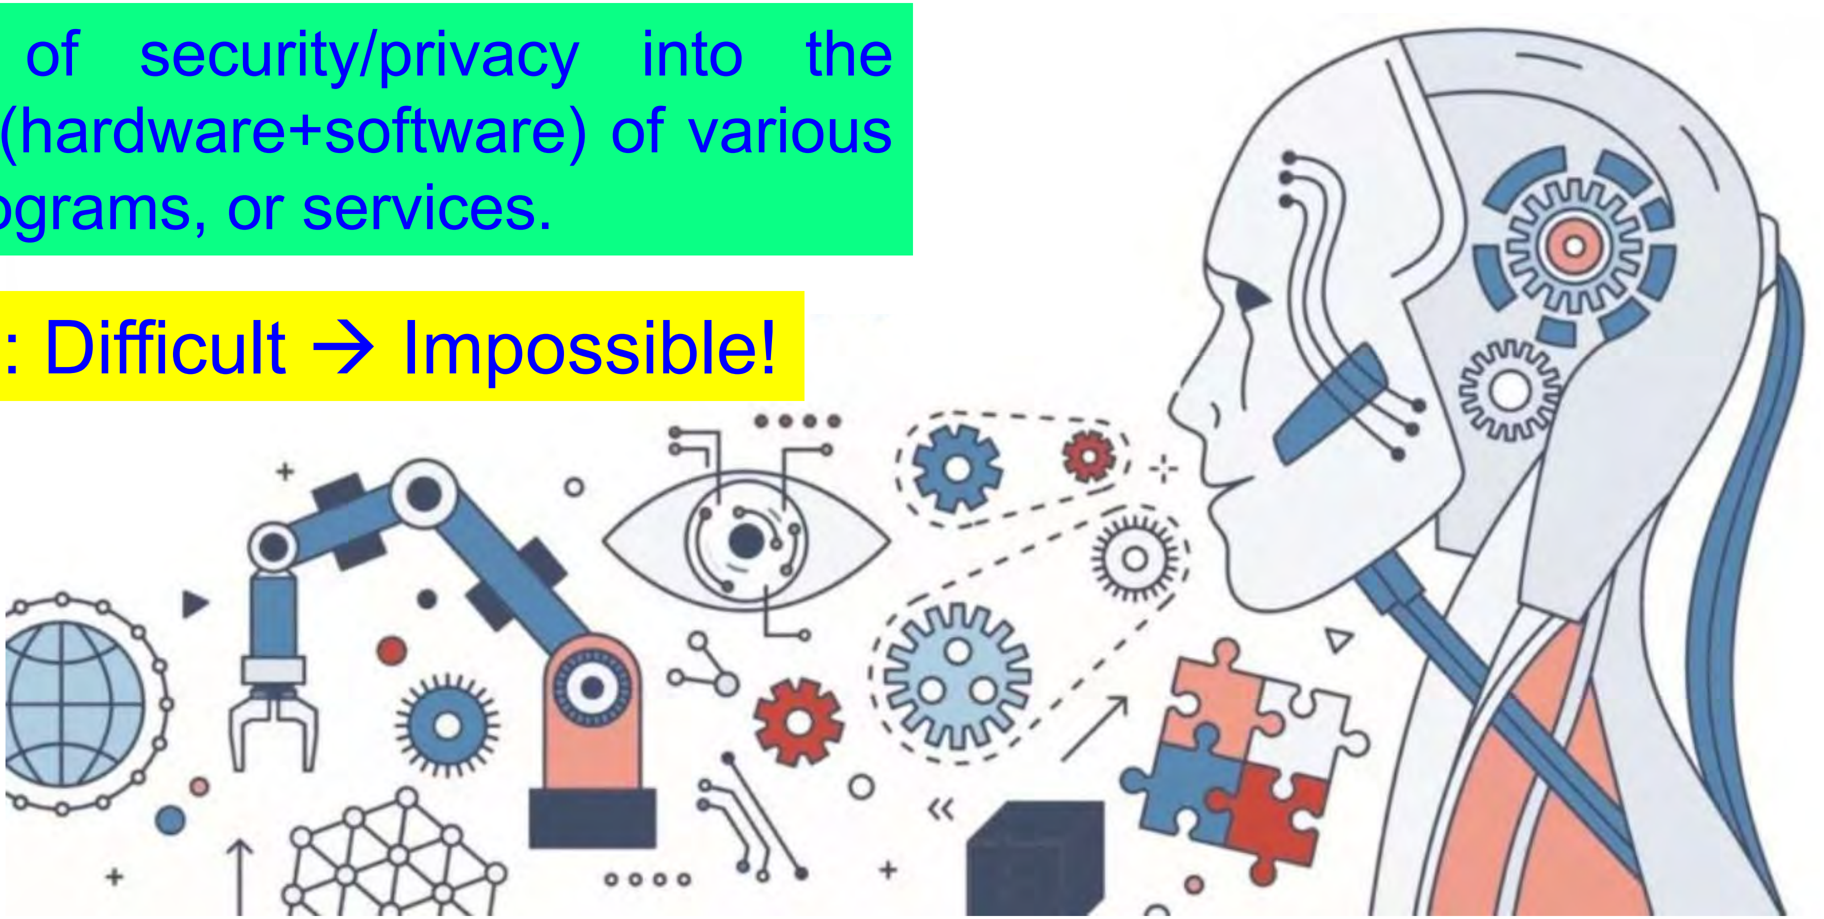
- GDPR makes Privacy by Design (PbD) a legal requirement

Security by Design
aka
Secure by Design (SbD)

Security by Design (SbD) and/or Privacy by Design (PbD)

Embedding of security/privacy into the architecture (hardware+software) of various products, programs, or services.

Retrofitting: Difficult → Impossible!



Source: https://teachprivacy.com/tag/privacy-by-design/

Security by Design (SbD)

7 Fundamental Principles

- Proactive not Reactive
- Security/Privacy as the Default
- Security/Privacy Embedded into Design
- Full Functionality - Positive-Sum, not Zero-Sum
- End-to-End Security/Privacy - Lifecycle Protection
- Visibility and Transparency
- Respect for Users

Source: https://iapp.org/media/pdf/resource_center/Privacy%20by%20Design%20-%207%20Foundational%20Principles.pdf

Security-by-Design (SbD) – Principles …

- Security features should be Proactive not Reactive: Cybersecurity solutions for SbD approach should be done in a proactive fashion in anticipation that cyberscrurity issues will arise, instead of exploring solutions after cyberscrurity crisis takes place.

Source: V. K. V. V. Bathalapalli, **S. P. Mohanty**, E. Kougianos, V. Iyer, and B. Rout, "iTPM: Exploring PUF-based Keyless TPM for Security-by-Design of Smart Electronics", in *Proceedings of the IEEE Computer Society Annual Symposium on VLSI (ISVLSI)*, 2023, pp. 1-6, DOI: https://doi.org/10.1109/ISVLSI59464.2023.10238586.

Security-by-Design (SbD) – Principles …

- Security should be Default: Cybersecurity features of the smart electronics should be default option in the context of hardware, software, and system specifications.

Source: V. K. V. V. Bathalapalli, **S. P. Mohanty**, E. Kougianos, V. Iyer, and B. Rout, "iTPM: Exploring PUF-based Keyless TPM for Security-by-Design of Smart Electronics", in *Proceedings of the IEEE Computer Society Annual Symposium on VLSI (ISVLSI)*, 2023, pp. 1-6, DOI: https://doi.org/10.1109/ISVLSI59464.2023.10238586.

Security-by-Design (SbD) – Principles …

- Security should be Embedded into Design: Cybsecurity solutions of a system should be integrated in the design and should be builtin as if the solutions cann't be separated from the system.

Source: V. K. V. V. Bathalapalli, **S. P. Mohanty**, E. Kougianos, V. Iyer, and B. Rout, "iTPM: Exploring PUF-based Keyless TPM for Security-by-Design of Smart Electronics", in *Proceedings of the IEEE Computer Society Annual Symposium on VLSI (ISVLSI)*, 2023, pp. 1-6, DOI: https://doi.org/10.1109/ISVLSI59464.2023.10238586.

Security-by-Design (SbD) – Principles …

- Security should be incorporated as a Full Functionality - PositiveSum, not Zero-Sum without trade-offs: To facilitate effective integration with smart electronics, the SbD approach should have not tradeoffs and shouldn't have energy, battery, and performance overheads.

Source: V. K. V. V. Bathalapalli, **S. P. Mohanty**, E. Kougianos, V. Iyer, and B. Rout, "iTPM: Exploring PUF-based Keyless TPM for Security-by-Design of Smart Electronics", in *Proceedings of the IEEE Computer Society Annual Symposium on VLSI (ISVLSI)*, 2023, pp. 1-6, DOI: https://doi.org/10.1109/ISVLSI59464.2023.10238586.

Security-by-Design (SbD)

- Security-Solutions should be End-to-End Security for Lifecycle Protection: The cybersecurity solutions should provide security in the entire life-cycle of the smart electronics, from design to deployment.

Source: V. K. V. V. Bathalapalli, **S. P. Mohanty**, E. Kougianos, V. Iyer, and B. Rout, "iTPM: Exploring PUF-based Keyless TPM for Security-by-Design of Smart Electronics", in *Proceedings of the IEEE Computer Society Annual Symposium on VLSI (ISVLSI)*, 2023, pp. 1-6, DOI: https://doi.org/10.1109/ISVLSI59464.2023.10238586.

Security-by-Design (SbD)

- Security-Solutions should have Visibility and Transparency: The SbD approach in an Electronic system should be easily understandable and information should be visible and clear.

Source: V. K. V. V. Bathalapalli, **S. P. Mohanty**, E. Kougianos, V. Iyer, and B. Rout, "iTPM: Exploring PUF-based Keyless TPM for Security-by-Design of Smart Electronics", in *Proceedings of the IEEE Computer Society Annual Symposium on VLSI (ISVLSI)*, 2023, pp. 1-6, DOI: https://doi.org/10.1109/ISVLSI59464.2023.10238586.

Security-by-Design (SbD)

- Security-Solutions should have Respect for Users: The cybsecurity solutions should respect the users in terms of their safety, privacy, and convenience.

Source: V. K. V. V. Bathalapalli, **S. P. Mohanty**, E. Kougianos, V. Iyer, and B. Rout, "iTPM: Exploring PUF-based Keyless TPM for Security-by-Design of Smart Electronics", in *Proceedings of the IEEE Computer Society Annual Symposium on VLSI (ISVLSI)*, 2023, pp. 1-6, DOI: https://doi.org/10.1109/ISVLSI59464.2023.10238586.

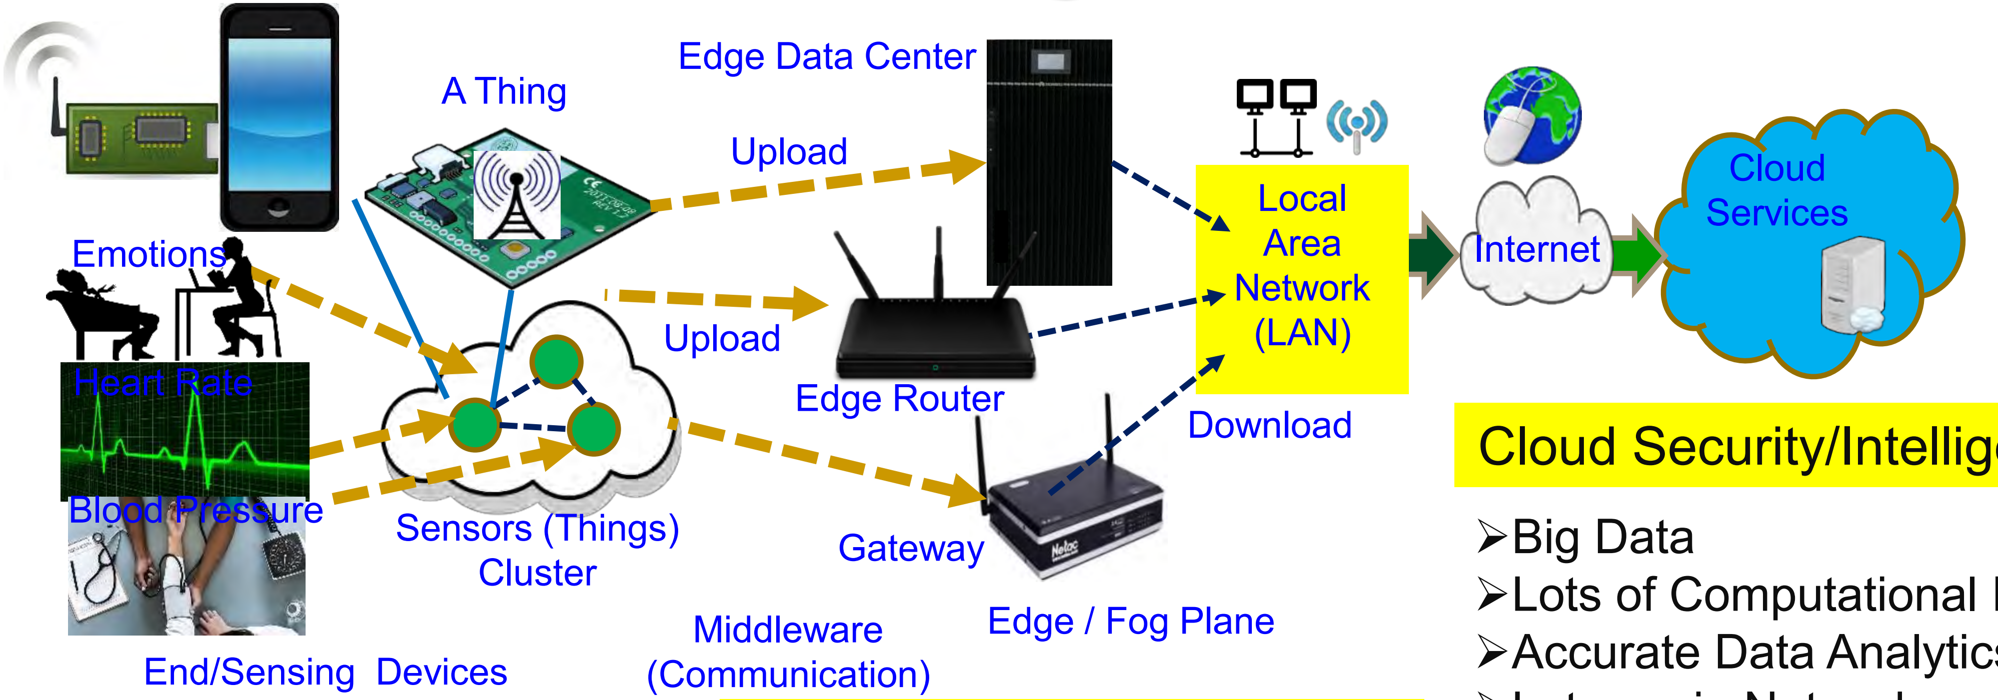
CPS – IoT-Edge Vs IoT-Cloud



Cloud Security/Intelligence

- Big Data
- Lots of Computational Resource
- Accurate Data Analytics
- Latency in Network
- Energy Overhead in Communications

End Security/Intelligence

- Minimal Data
- Minimal Computational Resource
- Least Accurate Data Analytics
- Very Rapid Response

Edge Security/Intelligence

- Less Data
- Less Computational Resource
- Less Accurate Data Analytics
- Rapid Response

Heavy-Duty ML is more suitable for smart cities

TinyML at End and/or Edge is key for smart villages.

Secure SoC - Alternatives

- Development of hardware amenable algorithms.
- Building efficient VLSI architectures.
- Hardware-software co-design for security, power, and performance tradeoffs.
- SoC design for cybersecurity, power, and performance tradeoffs.

Trustworthy Electronic System

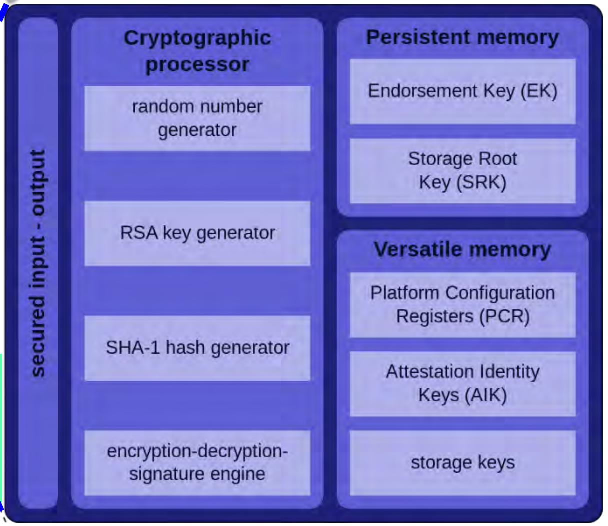
- A selective attributes of electronic system to be trustworthy:
  - It must maintain integrity of information it is processing.
  - It must conceal any information about the computation performed through any side channels such as power analysis or timing analysis.
  - It must perform only the functionality it is designed for, nothing more and nothing less.
  - It must not malfunction during operations in critical applications.
  - It must be transparent only to its owner in terms of design details and states.
  - It must be designed using components from trusted vendors.
  - It must be built/fabricated using trusted fabs.

Hardware-Assisted Security (HAS)

- Software based Security:
  - A general purposed processor is a deterministic machine that computes the next instruction based on the program counter.
  - Software based security approaches that rely on some form of encryption can’t be full proof as breaking them is just matter of time.
  - It is projected that quantum computers that use different paradigms than the existing computers will make things worse.
- Hardware-Assisted Security (HAS): Security/Protection provided by the hardware: for information being processed by an electronic system, for hardware itself, and/or for the system.

Hardware Cybersecurity Primitives – TPM, HSM, TrustZone, and PUF

Hardware Security Module (HSM)



Trusted Platform Module (TPM)

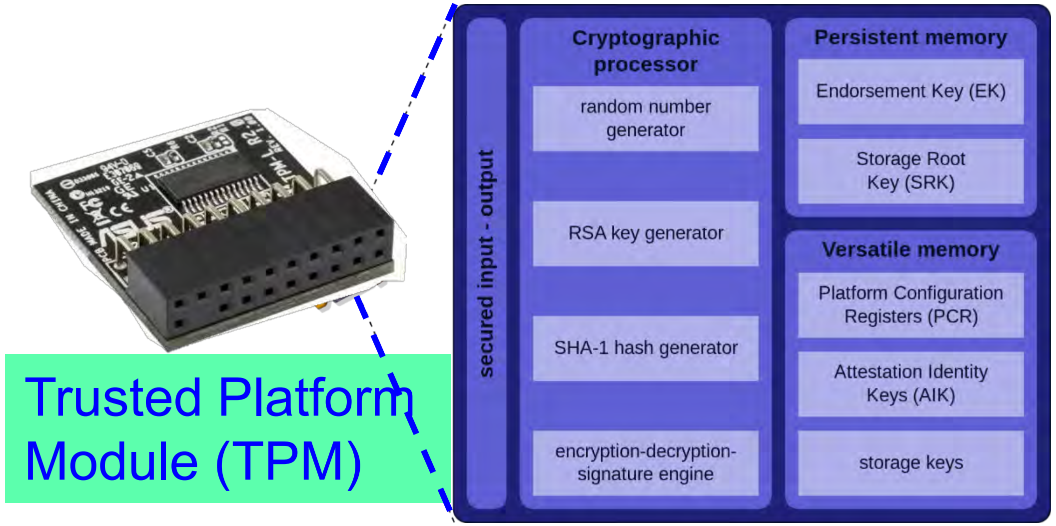
Keep It Simple Stupid (KISS) → Keep It Isolated Stupid (KIIS)

Physical Unclonable Functions (PUF)

Source: Electric Power Research Institute (EPRI)

PUF versus TPM



Trusted Platform Module (TPM)

Physical Unclonable Functions (PUF)

Source: Electric Power Research Institute (EPRI)

TPM:

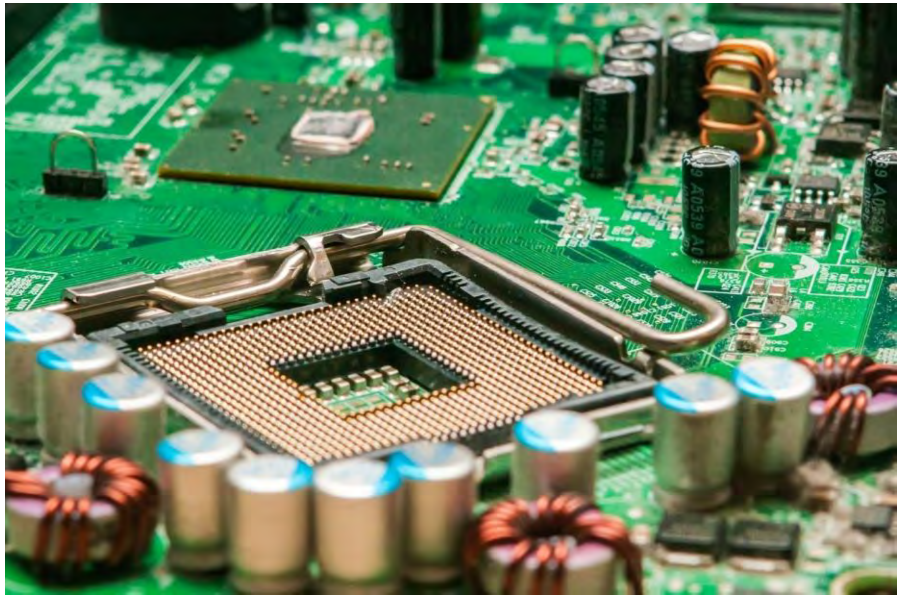
1) The set of specifications for a secure crypto- processor and
2) The implementation of these specifications on a chip

PUF:

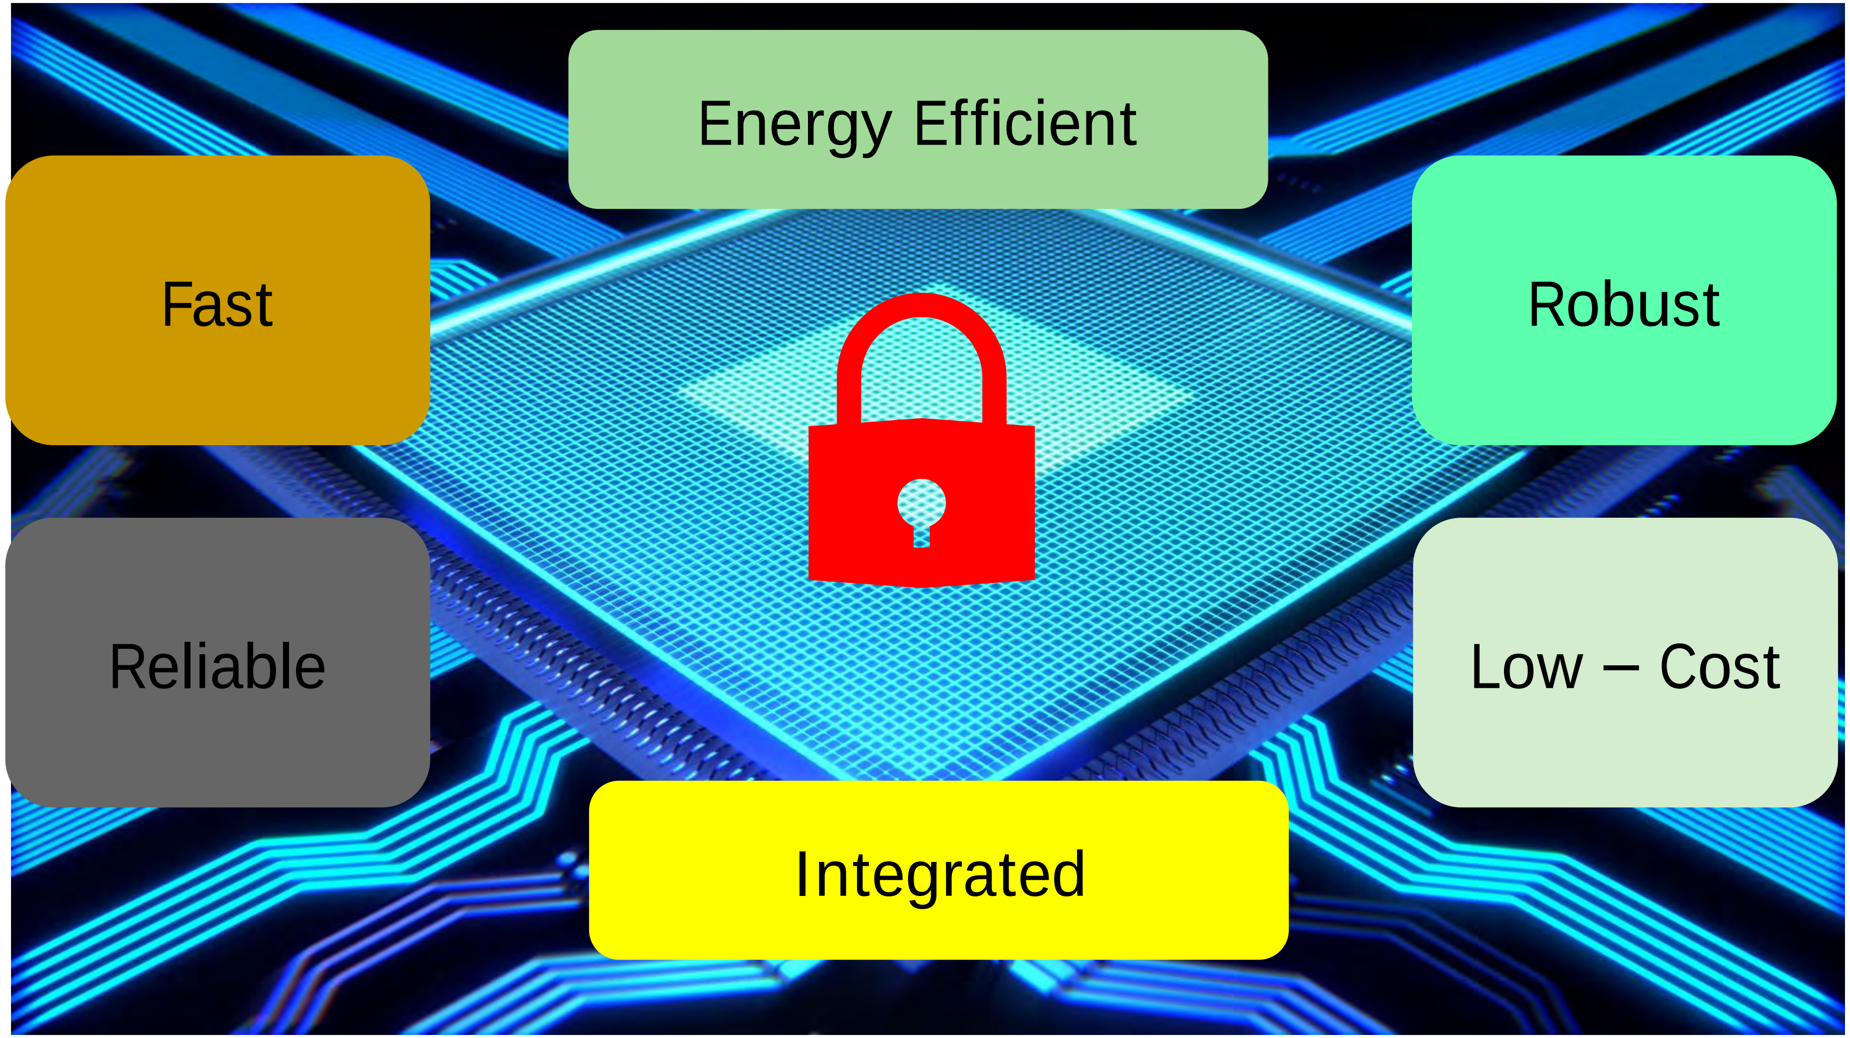
1) Based on a physical system
2) Generates random output values

PUF: A Hardware-Assisted Security Primitive

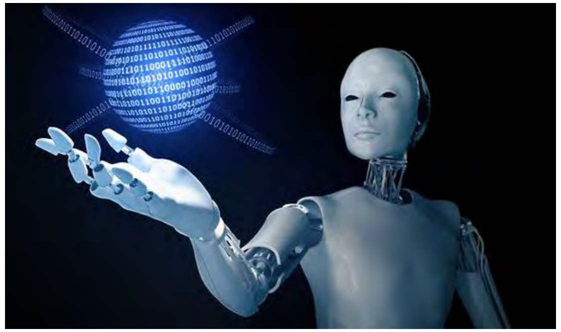
- PUF has a Challenge as an Input and Response as an Output
- Response output from the PUF design will be unique for the challenge input on that PUF design
- Arbiter PUF and Ring Oscillator PUF are the most widely used PUF designs for IoT applications
- Delay based PUF designs support higher number of Challenge Response pairs (CRP)



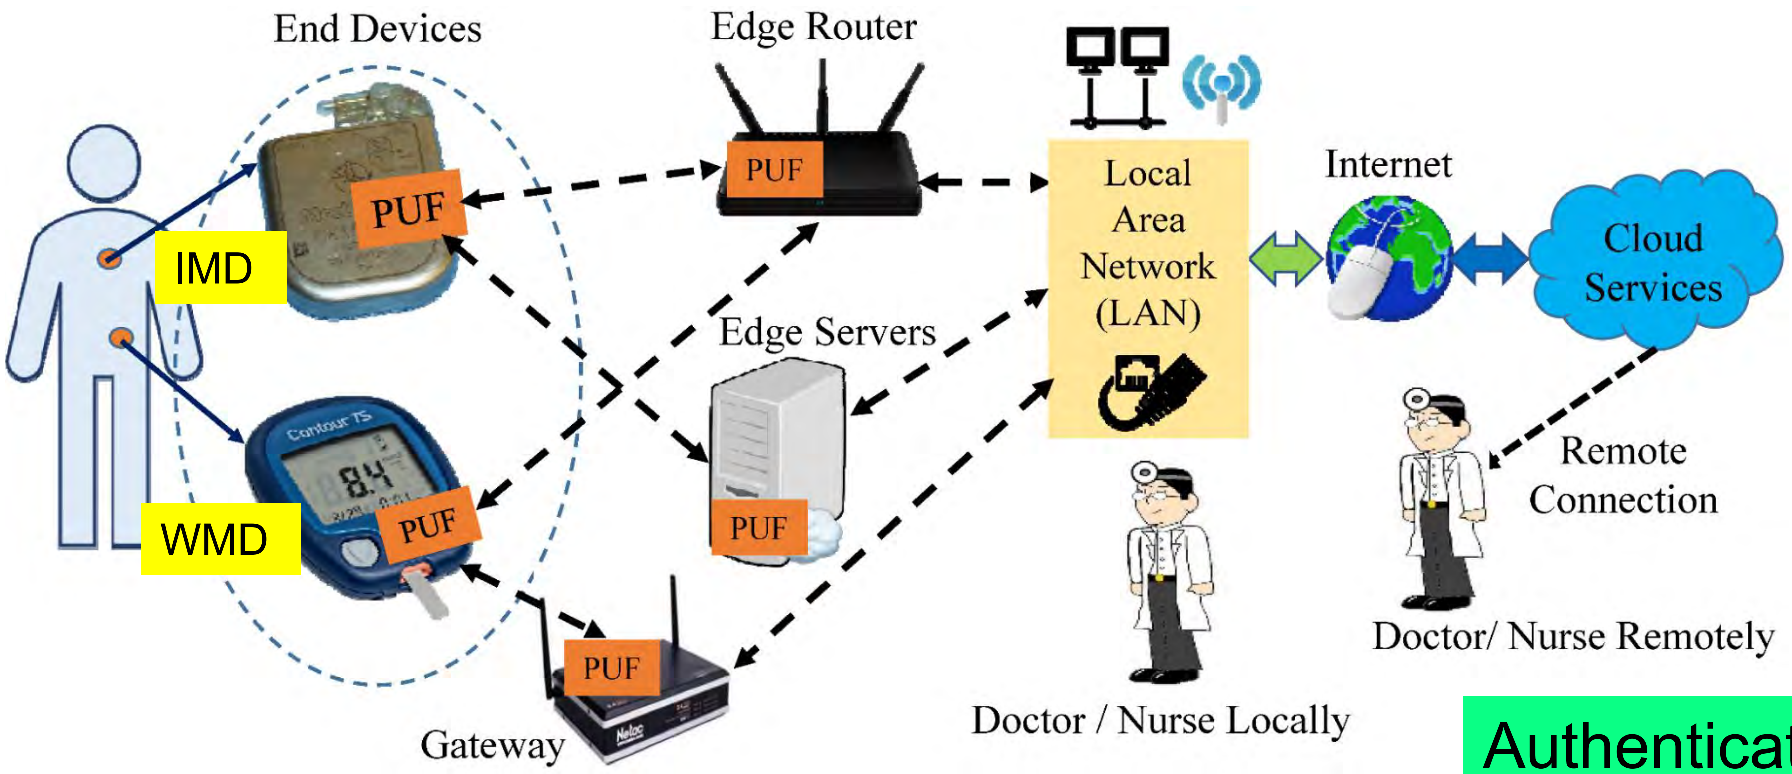
SbD/HAS - Advantages



Security-by-Design (SbD) – Specific Examples



PMsec: Our Secure by Design Approach for Robust Security in Healthcare CPS



Authenticates Time - 1 sec
Power Consumption - 200 μW

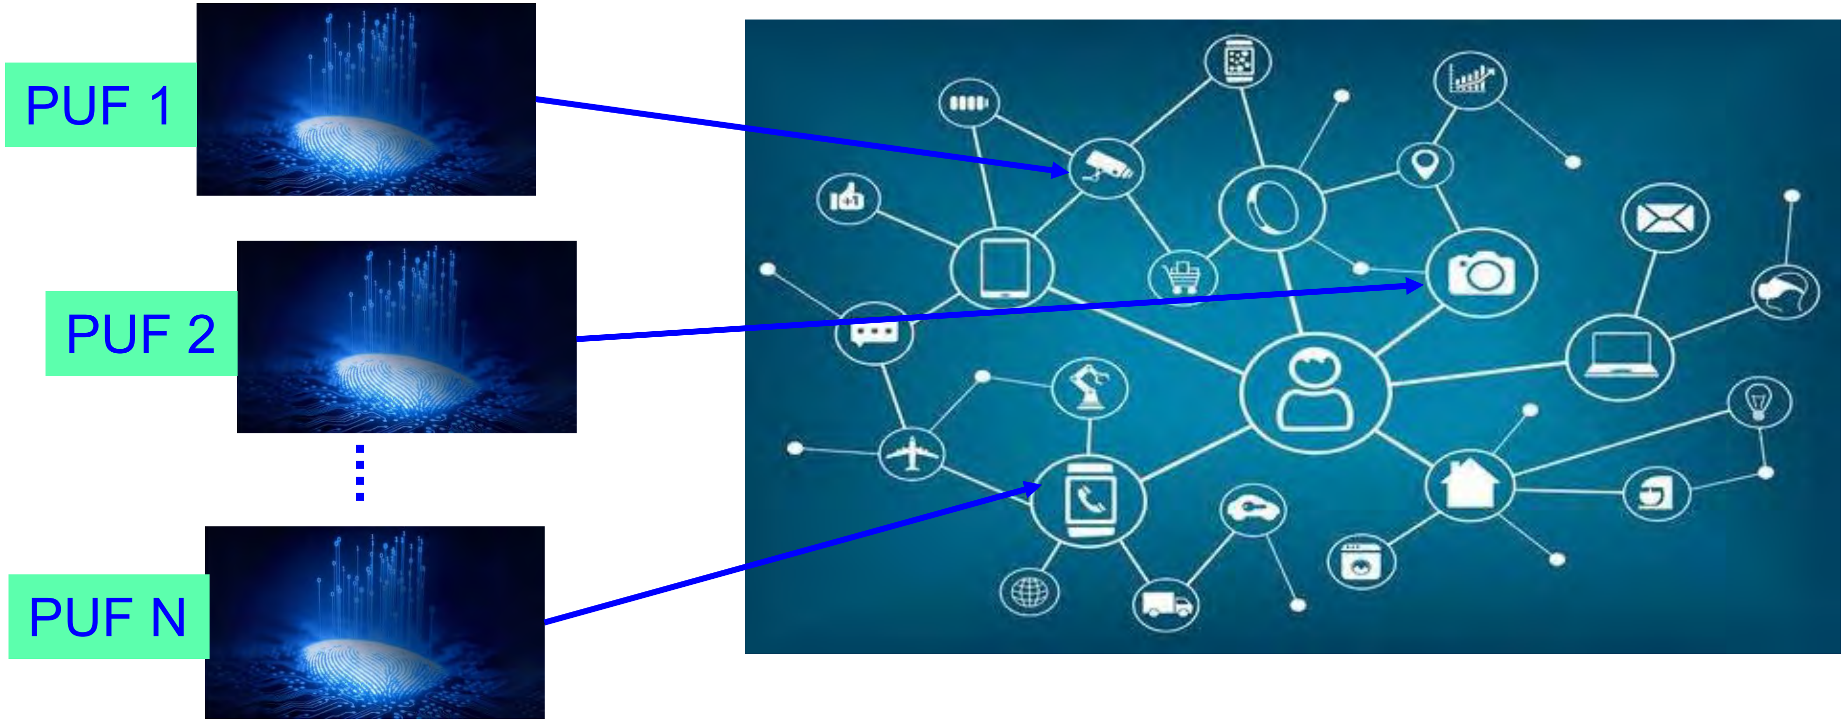
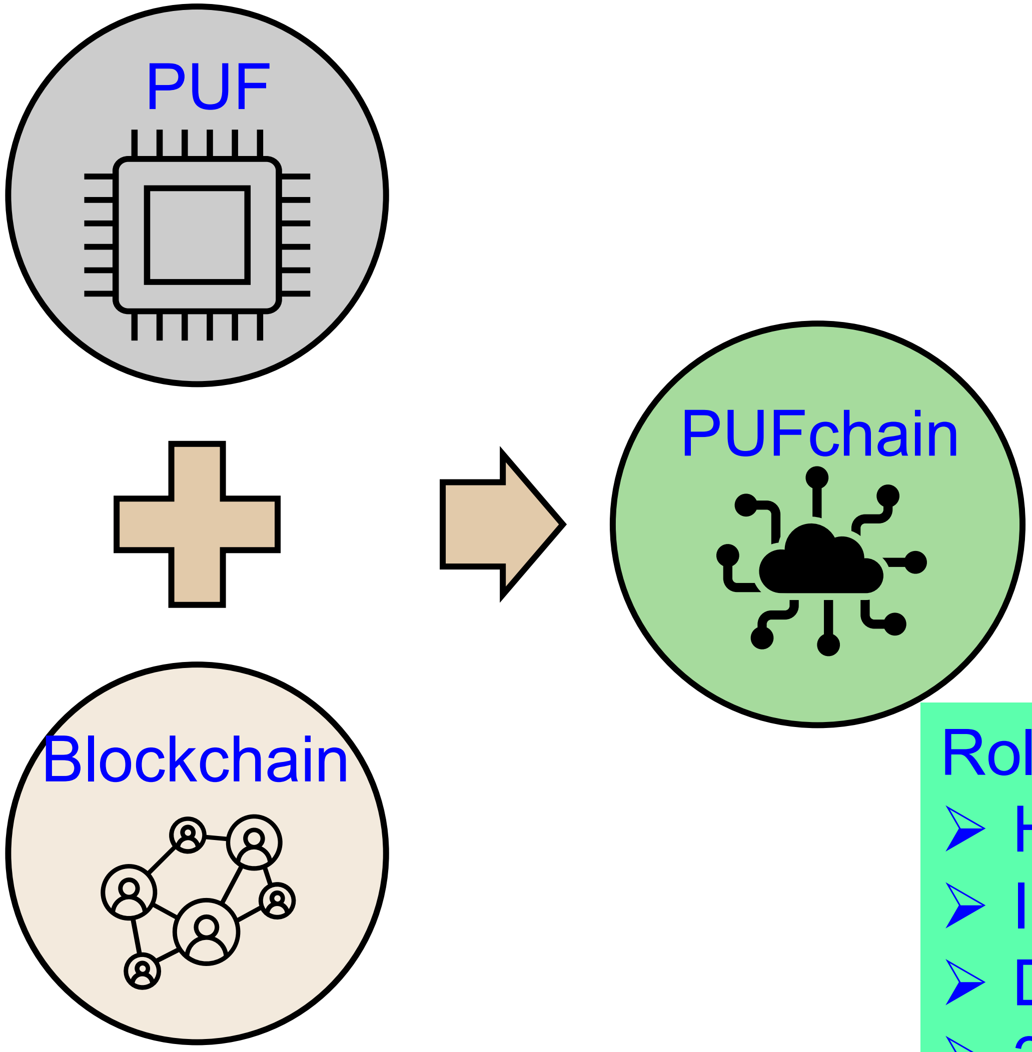
We Proposed World's First Hardware-Integrated Blockchain (PUFchain) that is Scalable, Energy-Efficient, and Fast



Source: S. P. Mohanty, V. P. Yanambaka, E. Kougianos, and D. Puthal, "PUFchain: Hardware-Assisted Blockchain for Sustainable Simultaneous Device and Data Security in Internet of Everything (IoE)", *IEEE Consumer Electronics Magazine (MCE)*, Vol. 9, No. 2, March 2020, pp. 8-16.

PUFchain – The Big Idea

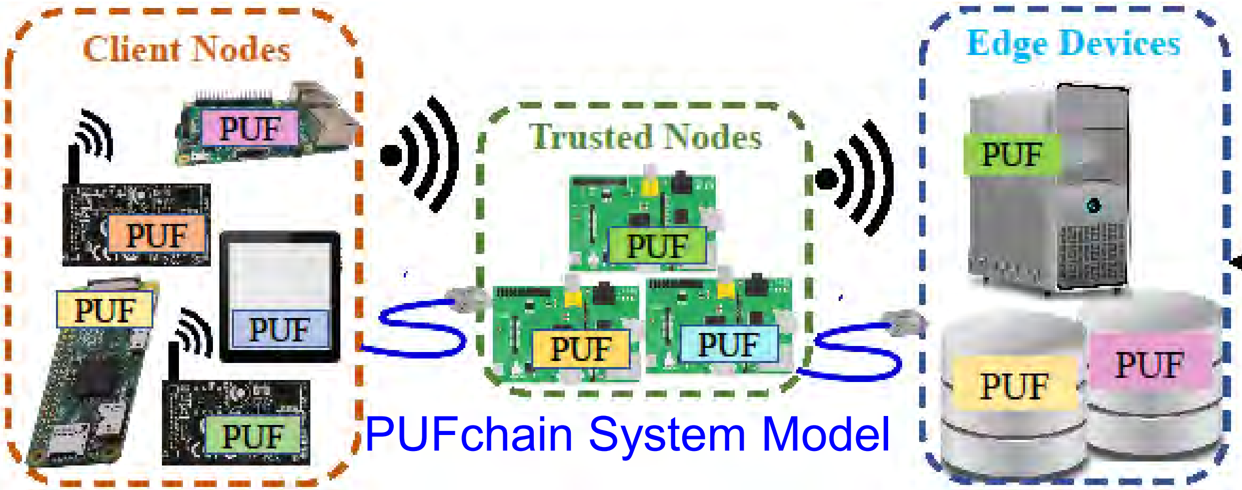


Blockchain Technology is integrated with Physically Unclonable Functions as PUFchain by storing the PUF Key into immutable Blockchain

Roles of PUF:

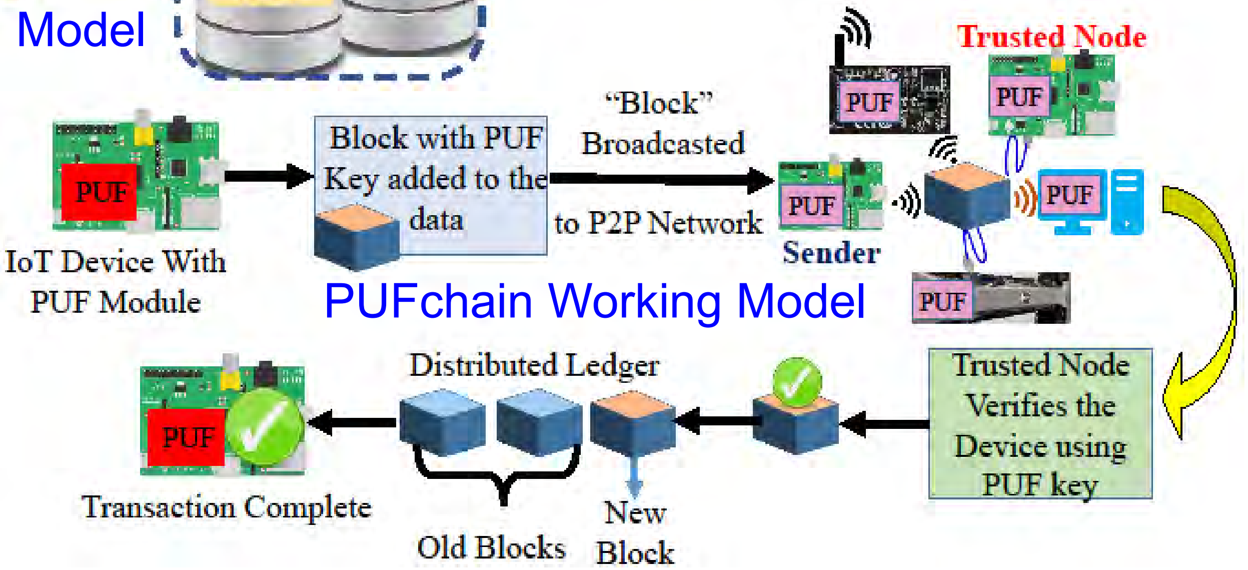
- Hardware Accelerator for Blockchain
- Independent Authentication
- Double-Layer Protection
- 3 modes: PUF, Blockchain, PUF+Blockchain

PUFchain: Our Hardware-Assisted Scalable Blockchain



PUFchain System Model

Can provide:
Device, System, and Data Security



PUFchain Working Model

PUFChain 2 Modes:
(1) PUF Mode and
(2) PUFChain Mode

- ✓ PoP is 1,000X faster than PoW
- ✓ PoP is 5X faster than PoAh

If PUF is So Great, Why Isn't Everyone Using It?

- PUF technology is difficult to implement well.
- In addition to security system expertise, one needs analog circuit expertise to harness the minute variances in silicon and do it reliably.
- Some PUF implementations plan for a certain amount of marginality in the analog designs, so they create a PUF field of 256 bits (for example), knowing that only 50 percent of those PUF features might produce reliable bits, then mark which features are used on each production part.
- PUF technology relies on such minor variances, long-term quality can be a concern: will a PUF bit flip given the stresses of time, temperature, and other environmental factors?
- Overall the unique mix of security, analog expertise, and quality control is a formidable challenge to implementing a good PUF technology.

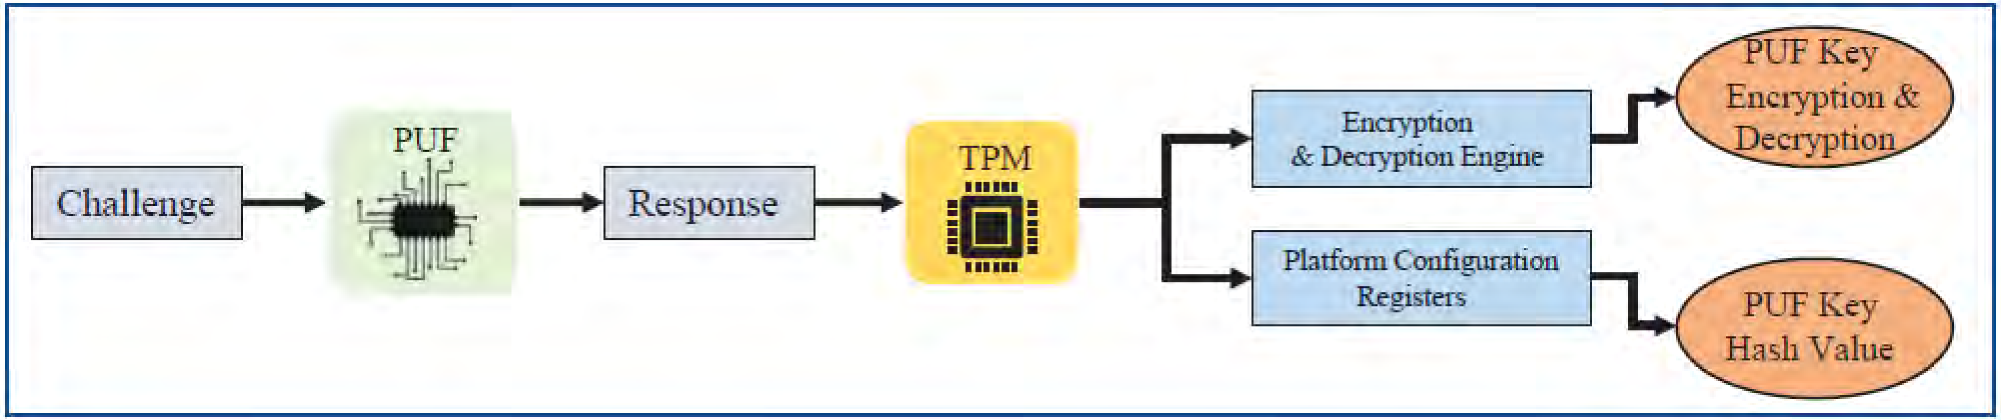
Our iTPM: Exploring PUF-based Keyless TPM for Security-by-Design of Smart Electronics



- The proposed SbD primitive works by performing secure verification of the PUF key using TPM's Encryption and Decryption engine. The securely verified PUF Key is then bound to TPM using Platform Configuration Registers (PCR).
- By binding PUF with PCR in TPM, a novel PUF-based access control. The policy can be defined, as bringing in a new security ecosystem for the emerging Internet-of-Everything era.

Conclusion

Conclusion

- Cybersecurity is important problem in IoT-driven Cyber-Physical Systems (CPS) that build smart systems.
- Various elements and components of IoT/CPS including Data, Devices, System Components, AI need security.
- Both software and hardware-based attacks and solutions are possible for cybersecurity in IoT/CPS.
- Cybersecurity in IoT-based H-CPS, A-CPS, E-CPS, and T-CPS, IIoT, can have serious consequences.
- Existing cybersecurity solutions have serious overheads and may not even run in the end-devices (e.g. a medical device) of CPS/IoT.
- Security-by-Design (SbD) advocate features at early design phases, no-retrofitting.
- Hardware-Assisted Security (HAS): Cybersecurity provided by hardware for: (1) information being processed, (2) hardware itself, (3) overall system.

Future Directions

- Security by Design (PbD) needs significant research.
- Cybersecurity, Privacy, IP Protection of Information, Device, and System in Cyber-Physical Systems or CPS need more research.
- Cybersecurity of IoT-based systems (e.g. Smart Healthcare device/data, Smart Agriculture, Smart Grid, UAV, Smart Cars) needs research.
- Sustainable IoT and CPS with integrated cybersecurity features can provide robust solutions.
- More research is needed for robust, low-overhead PUF design and protocols that can be integrated in any CPS.
- Cybersecurity solutions for the quantum computing era for system needs attention.
